Foerster et al (KaoS) '07  
Salabura '12 (HADES)  
CBM (FAIR) Physics Book '11..

# Strange pseudoscalar mesons: Kaons in matter

## Relativistic mean-field models

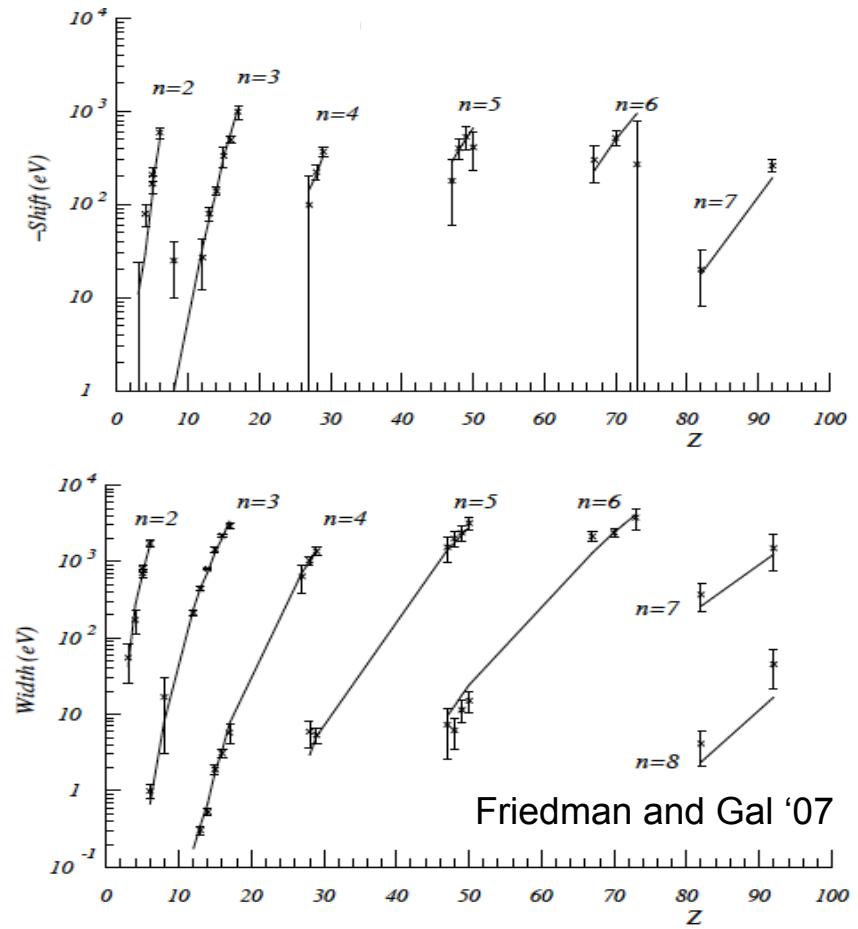

Early works on meson-exchange picture or the chiral approach for the  $\bar{K}N$  interaction on the mean-field level and fit the parameters to the  $\bar{K}N$  scattering length

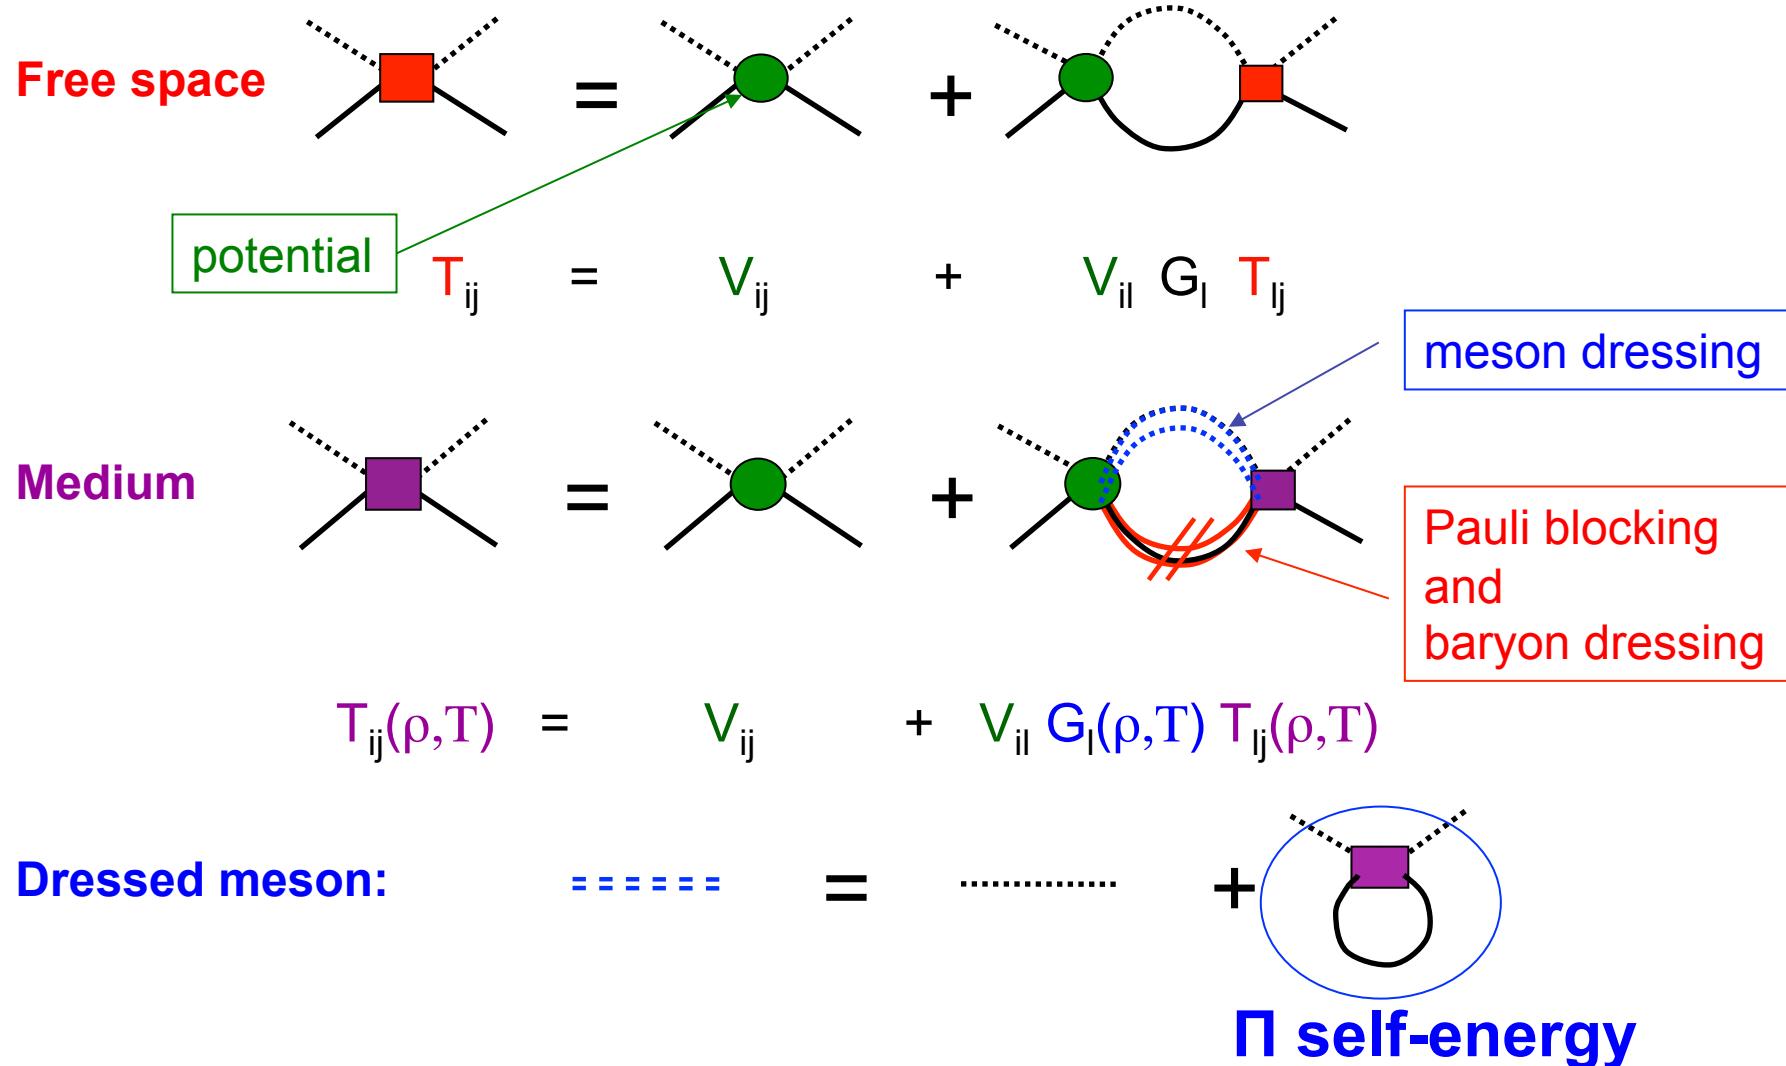

Schaffner-Bielich, Mishustin and Bondorf '97

## Phenomenological models

density dependent potentials fitted to kaonic atoms ( $\chi^2$  fit)

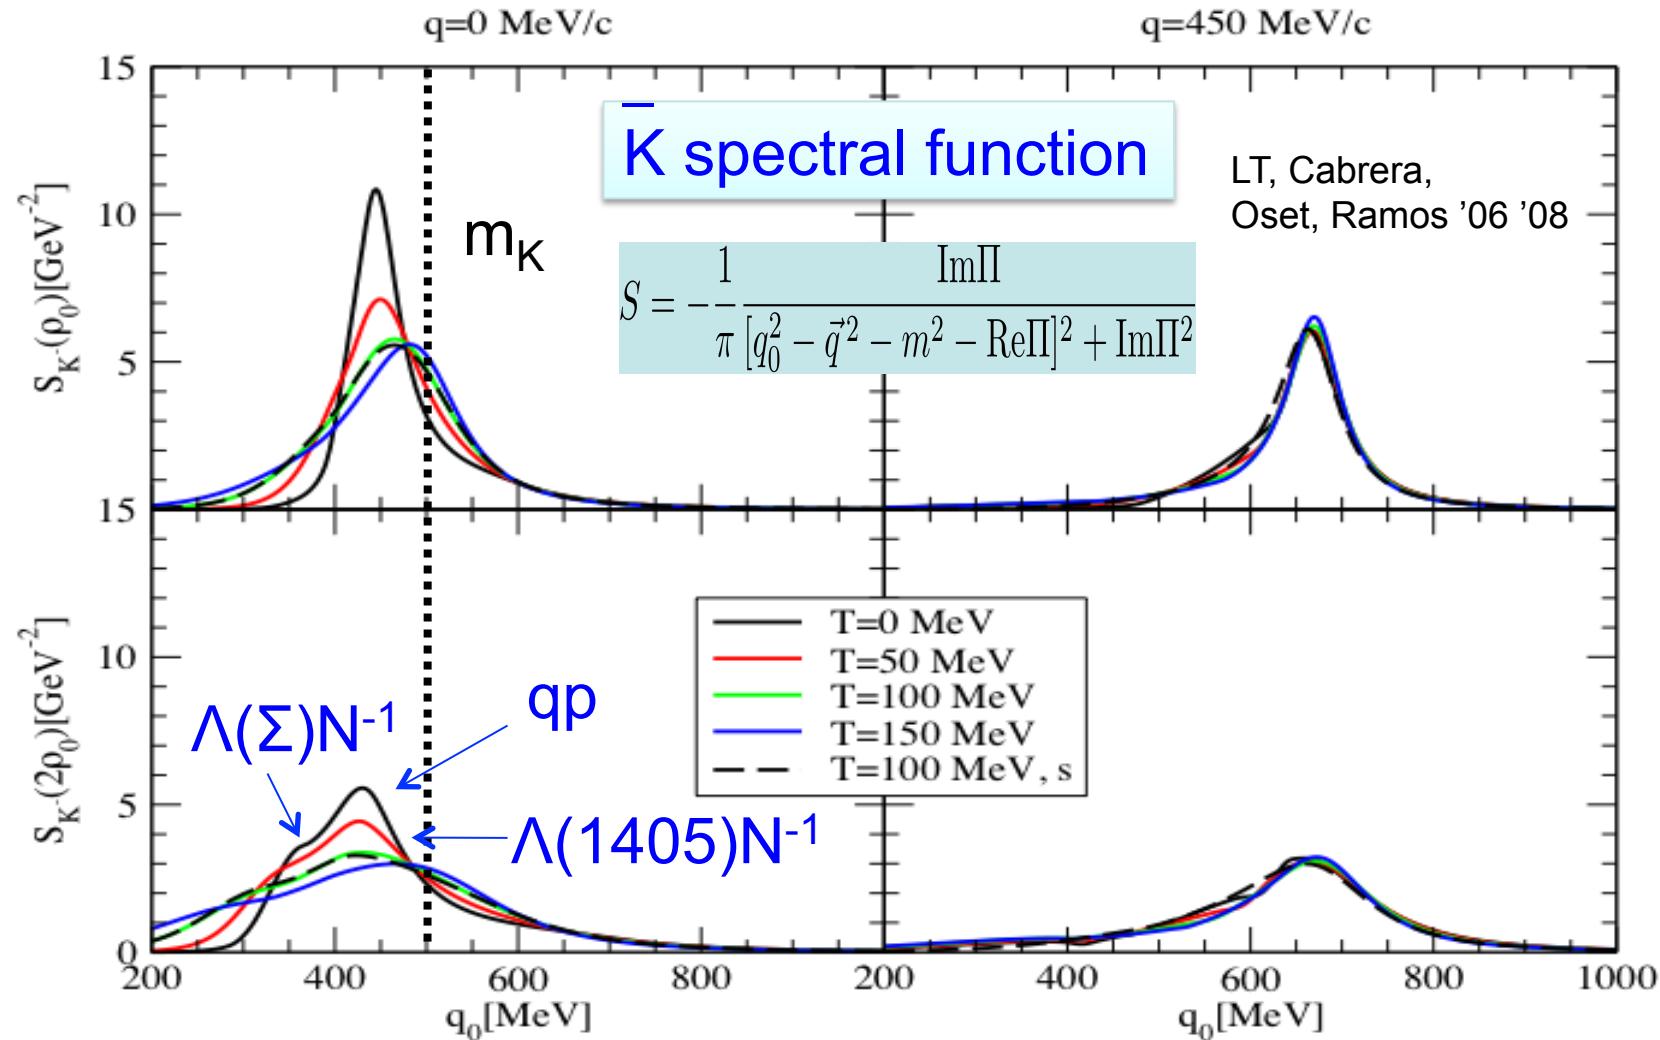

# Unitarized theory in matter: selfconsistent coupled-channel procedure

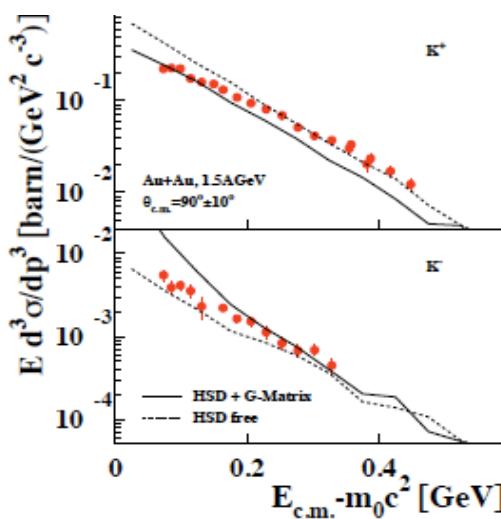

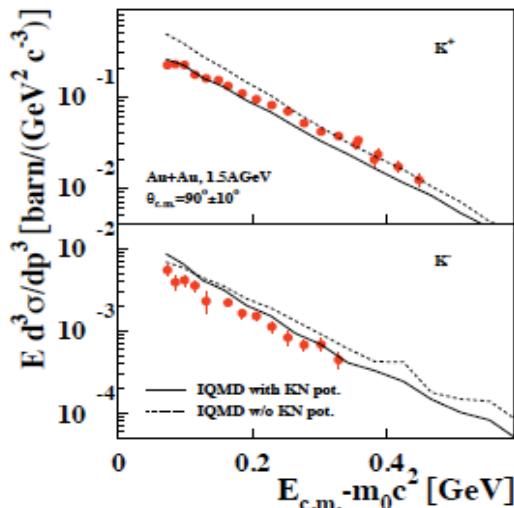

# Unitarized theory in matter: selfconsistent coupled-channel procedure

Koch '94; Waas and Weise '97;  
Kaiser et al '97; Oset and Ramos'98;  
Lutz '98; Schaffner-Bielich et al '00;  
Ramos and Oset '00; Lutz et al '02 ;

Magas et al '05; LT et al '06 '08;  
Lutz et al '08

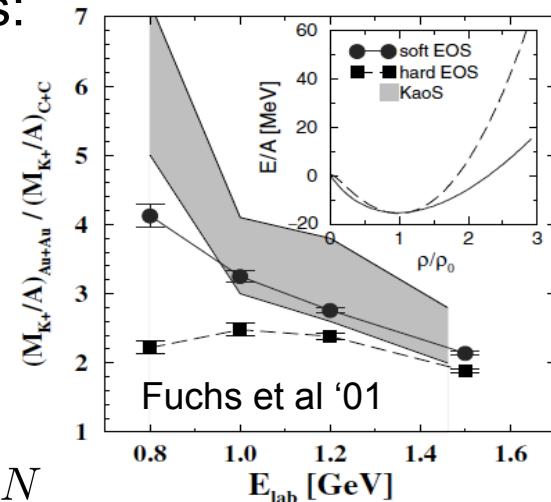

# Strangeness production at SIS/GSI (KaoS)

Foerster et al (KaoS) '07

From systematics of the experimental results and detailed comparison to transport model calculations:

- $K^+$  probe a soft EoS
- $K^+$  and  $K^-$  yields are coupled by strangeness exchange:  $NN \rightarrow K^+YN$   
 $K^-N \Leftrightarrow \pi Y$
- $K^+$  and  $K^-$  exhibit different freeze-out conditions
- No clear conclusion about medium modifications on  $K^-$

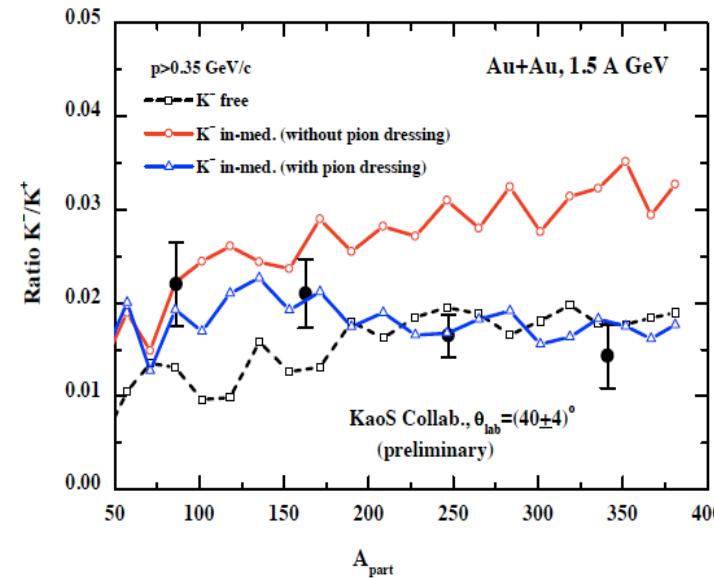

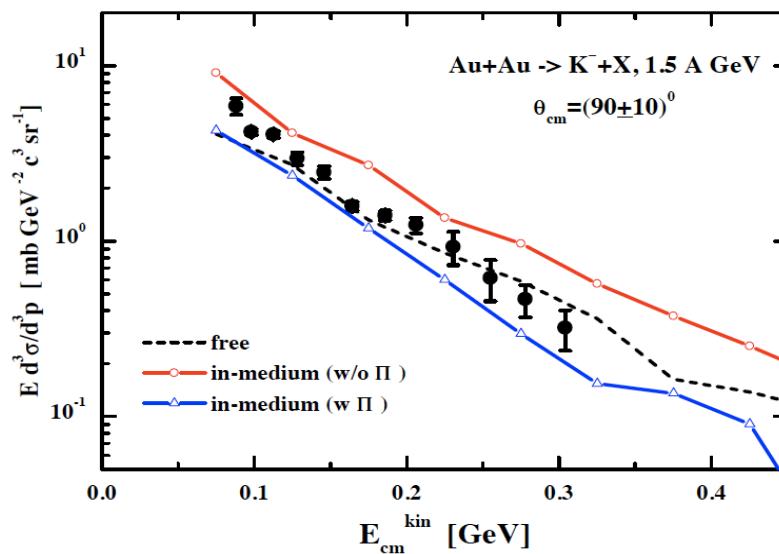

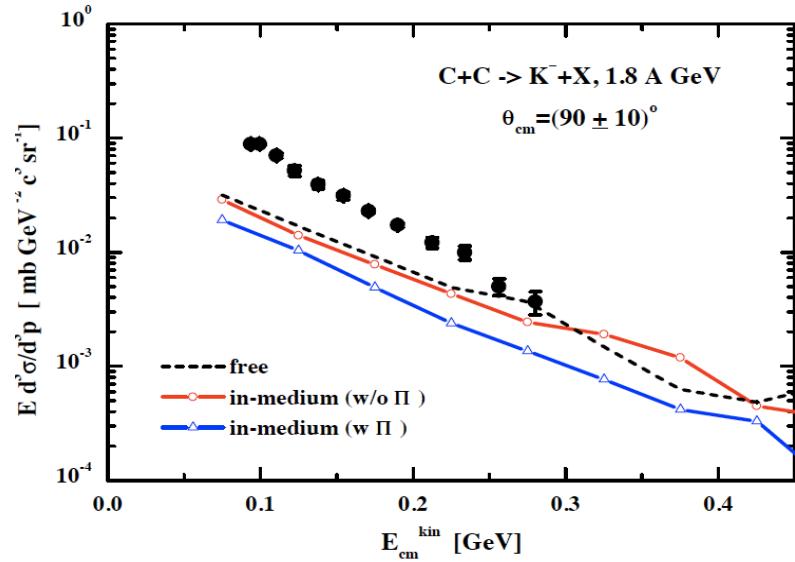

Recent report on strangeness production close to threshold in proton-nucleus and heavy-ion collisions  
Hartnack, Oeschler, Leifels, Bratkovskaya, Aichelin '12

# Antikaon production in A+A at SIS within offshell model

BUU transport model with antikaons dressed following G-matrix approach  
with Juelich meson-exchange model

Cassing, LT, Bratkovskaya and Ramos '03

First attempts to describe  
all data simultaneously with full spectral  
features of strange mesons

**Working on constructing an off-shell  
transport model with a realistic  
many-body scheme for strange  
mesons in matter**

**(Aichelin, Bratkovskaya, Cabrera, LT)**

# Vector mesons with strangeness: $\bar{K}^*$ and $K^*$ in matter

- Vector mesons in nuclear matter are tied to fundamental aspects of QCD
- Lot of attention paid to  $\rho$ ,  $\omega$ ,  $\phi$  in dense matter

modification:  
width increased,  
mass shift  $\Delta m \approx 0$ ?

$\rho$  meson: KEK325, CLAS-g7, CERES, NA60

$\omega$  meson: NA60, CBELSA/TAPS

$\phi$  meson: KEK325, LEPS

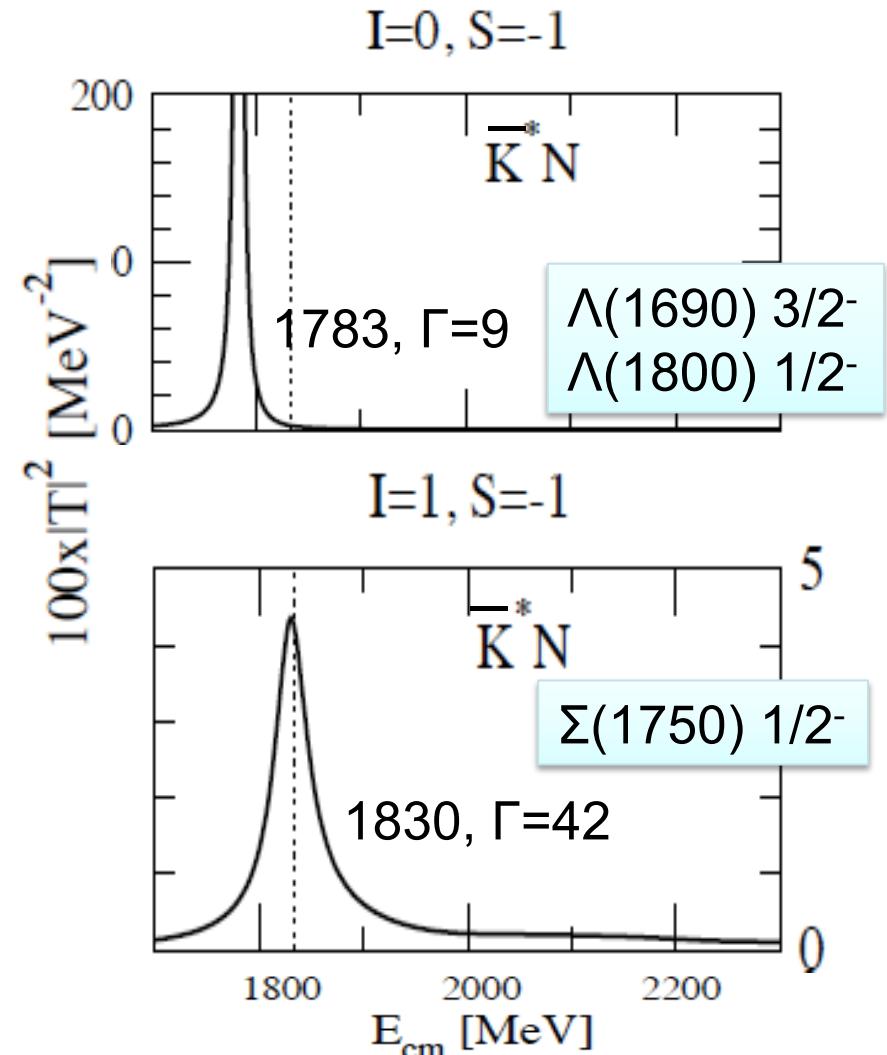

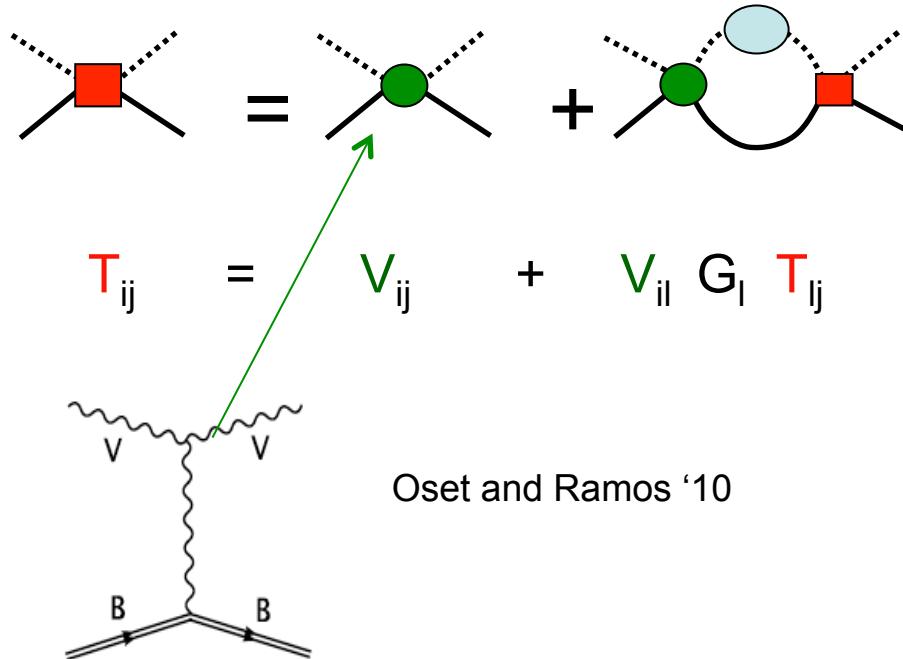

- What about strange vector mesons, such as  $\bar{K}^*/K^*$  ?

## Free space

within the local hidden gauge formalism

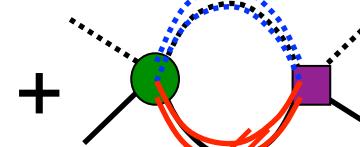

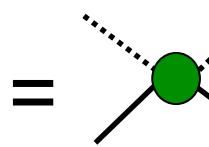

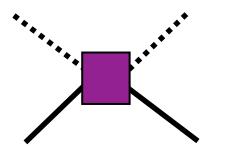

Bando, Kugo, Uehara, Yamawaki  
and Yanagida '85 '88;  
Harada and Yamawaki, '03;  
Meissner '88

using a coupled-channel unitary approach with VB-VB interaction

Latest works incorporate also  
PB-VB couplings and  
beyond t-channel  
Khemchandani, Kaneko, Martinez Torres,  
Nagahiro, Hosaka, '11 '12

## Medium

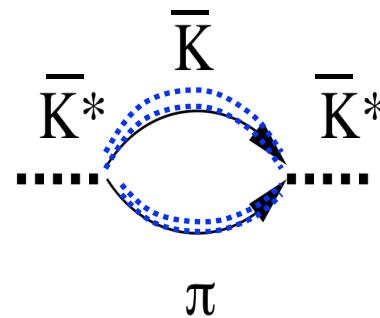

$$T_{ij} =$$

$$V_{ij}$$

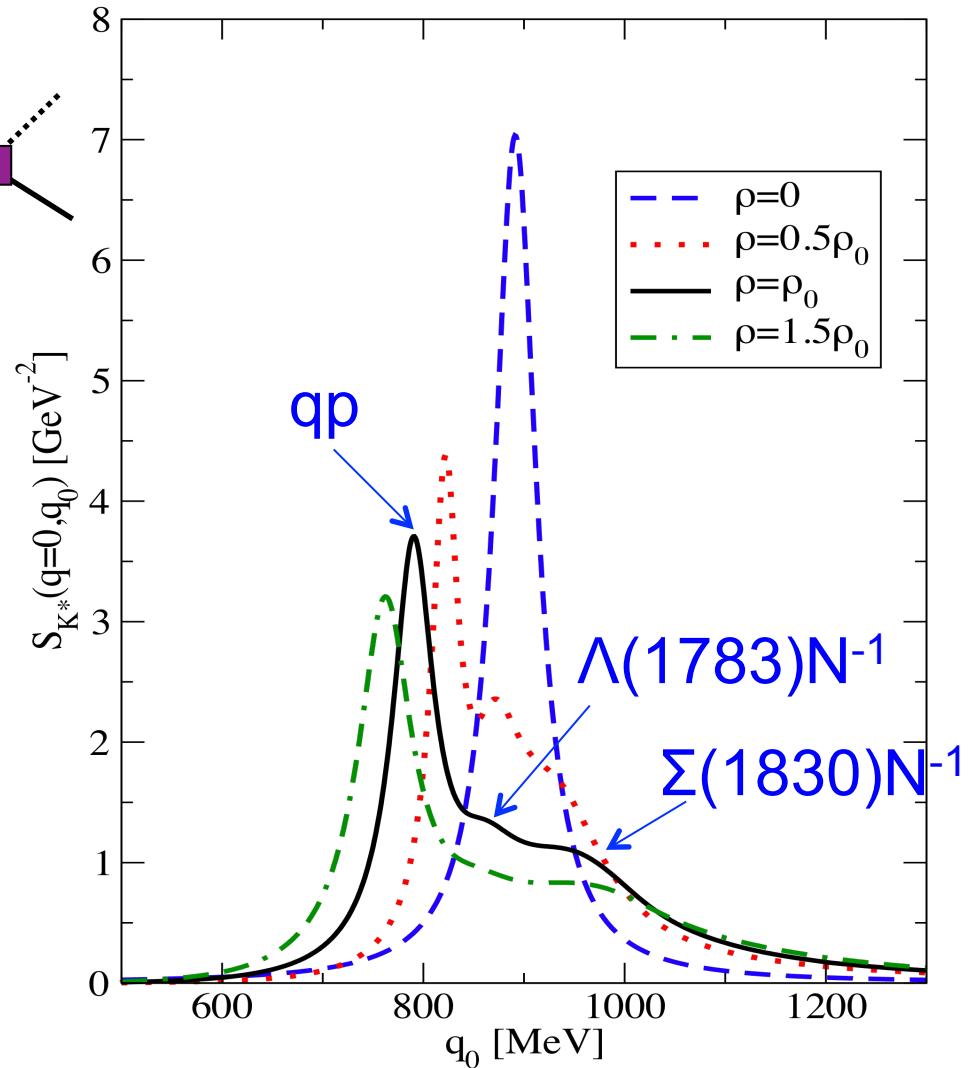

$$+ V_{il} G_l T_{lj}$$

and

$\bar{K}^*$  width becomes five times larger than in free space.

$$S = -\frac{1}{\pi} \frac{\text{Im}\Pi}{[q_0^2 - \vec{q}^2 - m^2 - \text{Re}\Pi]^2 + \text{Im}\Pi^2}$$

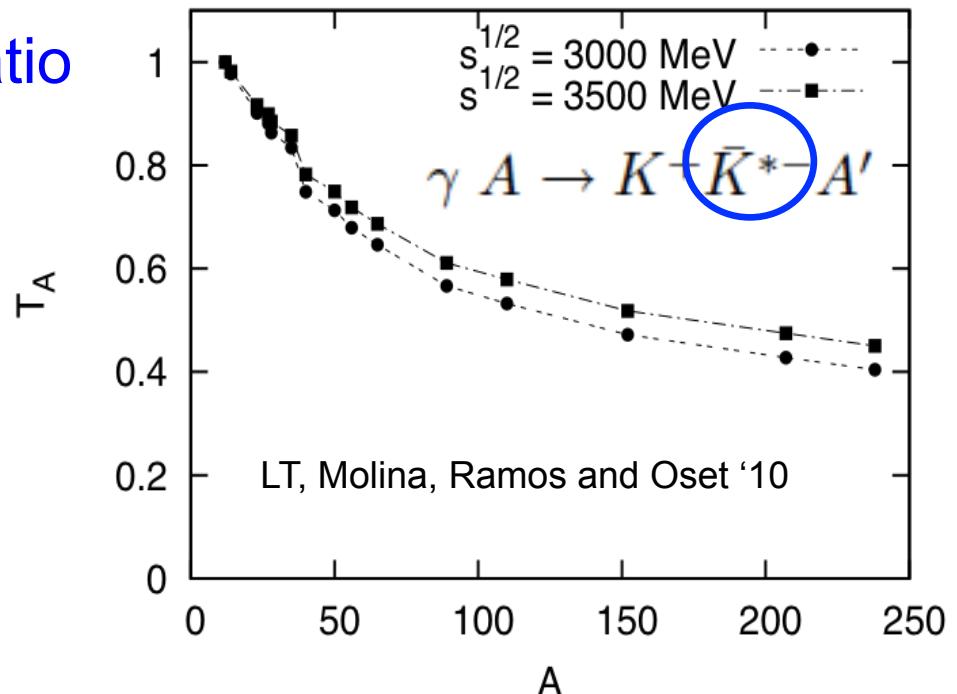

## Experiments: transparency ratio

$$\tilde{T}_A = \frac{\sigma_{\gamma A \rightarrow K^+ K^{*-} A'}}{A \sigma_{\gamma N \rightarrow K^+ K^{*-} N}}$$

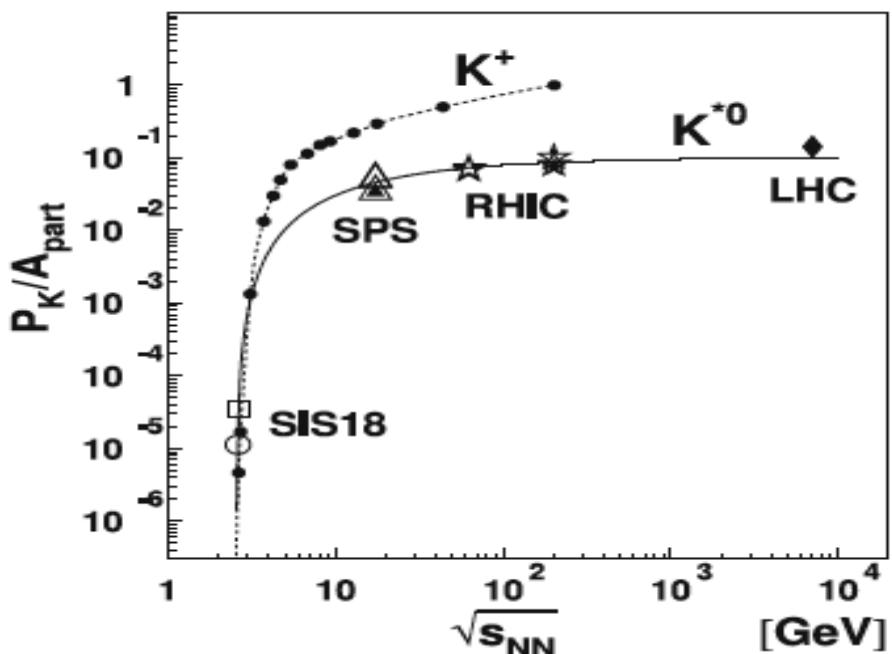

$$T_A = \frac{\tilde{T}_A}{\tilde{T}_{^{12}C}}$$

40-60% reduction in heavy nuclei (A=50-250) with respect to  $^{12}\text{C}$

## Working on the $K^{*(0,+)}$ properties in the nuclear medium at HADES

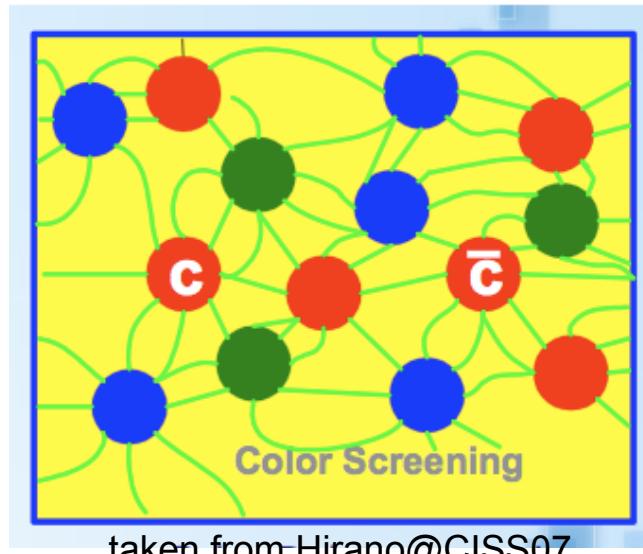

Recent results on deep subthreshold  $K^*(892)$  production in Ar+KCl at 1.76 AGeV  
Agakishiev et al (HADES) '13

# In-medium properties of charm in the laboratory

## J/ $\Psi$ suppression

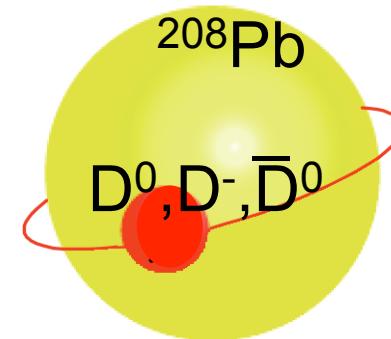

Gonin et al (NA50) '96, Matsui and Satz '86

taken from Hirano@CISS07

## D-mesic nuclei

Tsushima et al '99,  
Garcia-Recio et al '10  
Garcia-Recio et al '12  
Yasui et al '12..

but also comover scattering

$$\text{J}/\Psi + \pi \rightarrow \text{D} + \bar{\text{D}}$$

Capella, Ferreiro, Vogt, Wang, Bratkovskaya,  
Cassing, Andronic..

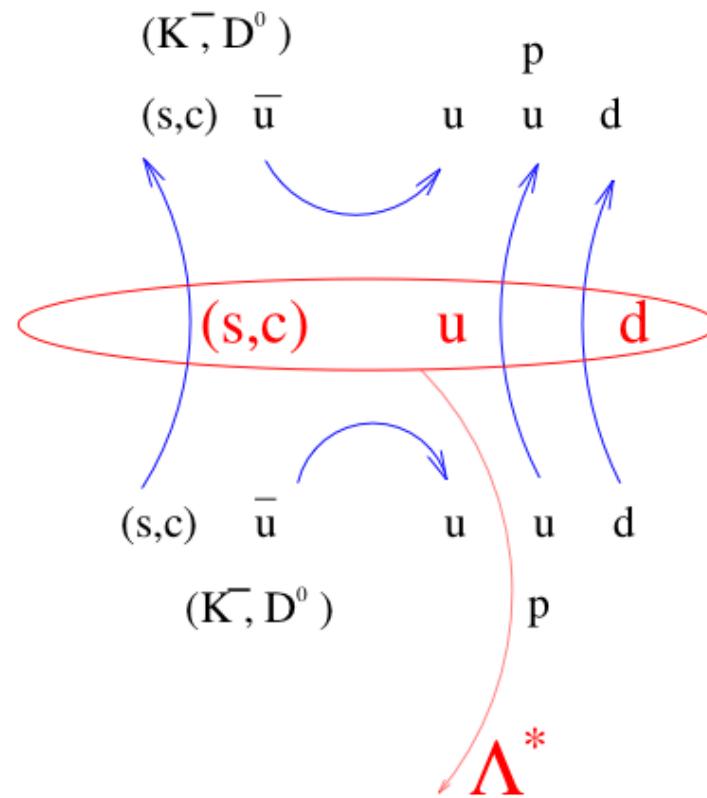

# Can we learn something from the strange sector?

$\bar{K}N$  and  $DN$  interactions show similarities. In the charm sector we also find a subthreshold  $I=0$  resonance, the  $\Lambda_c(2595)$  ( $udc$ ) with a strong resemblance to the  $\Lambda(1405)$  ( $uds$ ).

$$\bar{K} = \begin{pmatrix} \bar{K}^0 \\ -\bar{K}^- \end{pmatrix} \quad \begin{matrix} \bar{d} s \\ \bar{u} s \end{matrix} \quad s=-1$$

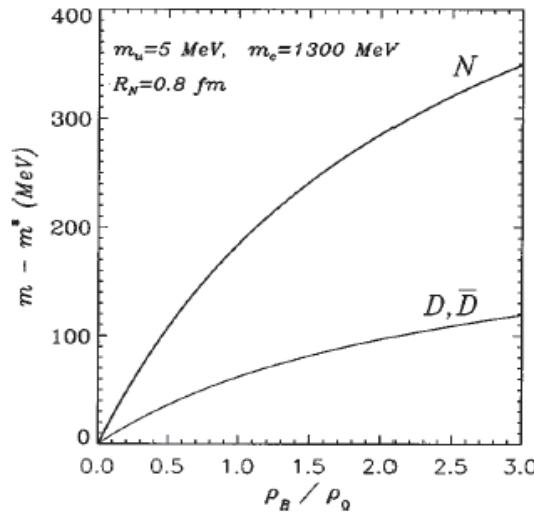

$$D = \begin{pmatrix} D^+ \\ D^0 \end{pmatrix} \quad \begin{matrix} \bar{d} c \\ \bar{u} c \end{matrix} \quad c=1$$

$$I(J^P) = 1/2 (0^-)$$

## QMC model

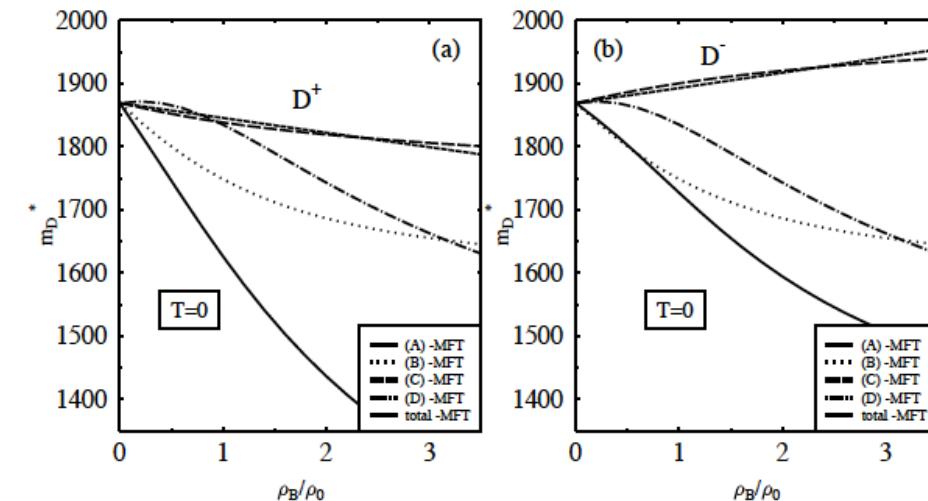

exchange of  $\omega$ ,  $\rho$ ,  $\sigma$  mesons  
among quarks in  
a meson/baryon bag

Tsushima,  
Thomas,  
Sibirtsev,  
Fountouras..

## MF/RHF model

Mishra, Kumar,..

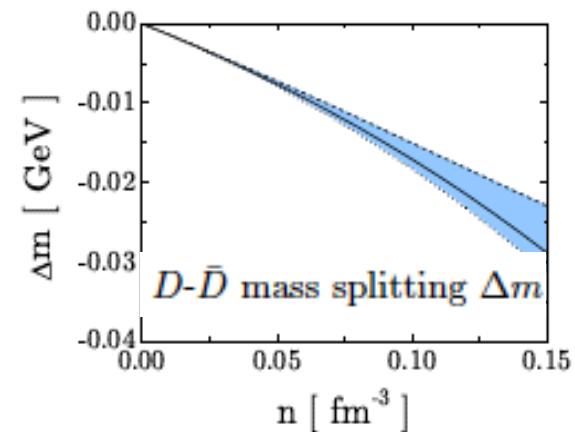

Effective lagrangian approach  
generalized to include charmed  
mesons in the mean field or  
relativistic Hartree-Fock approach

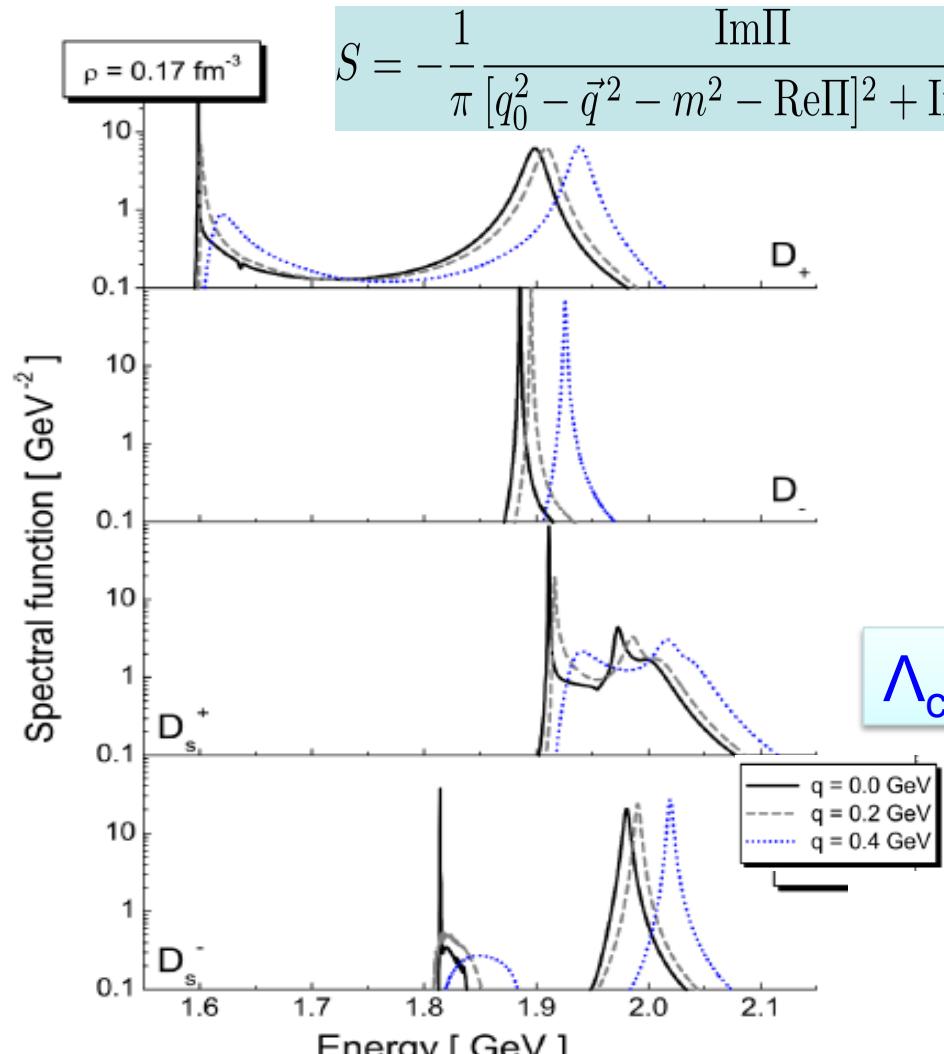

## QCD sum-rule

Hayashigaki,  
Weise, Hilger,  
Kaempfer, Leupold,  
Thomas,..

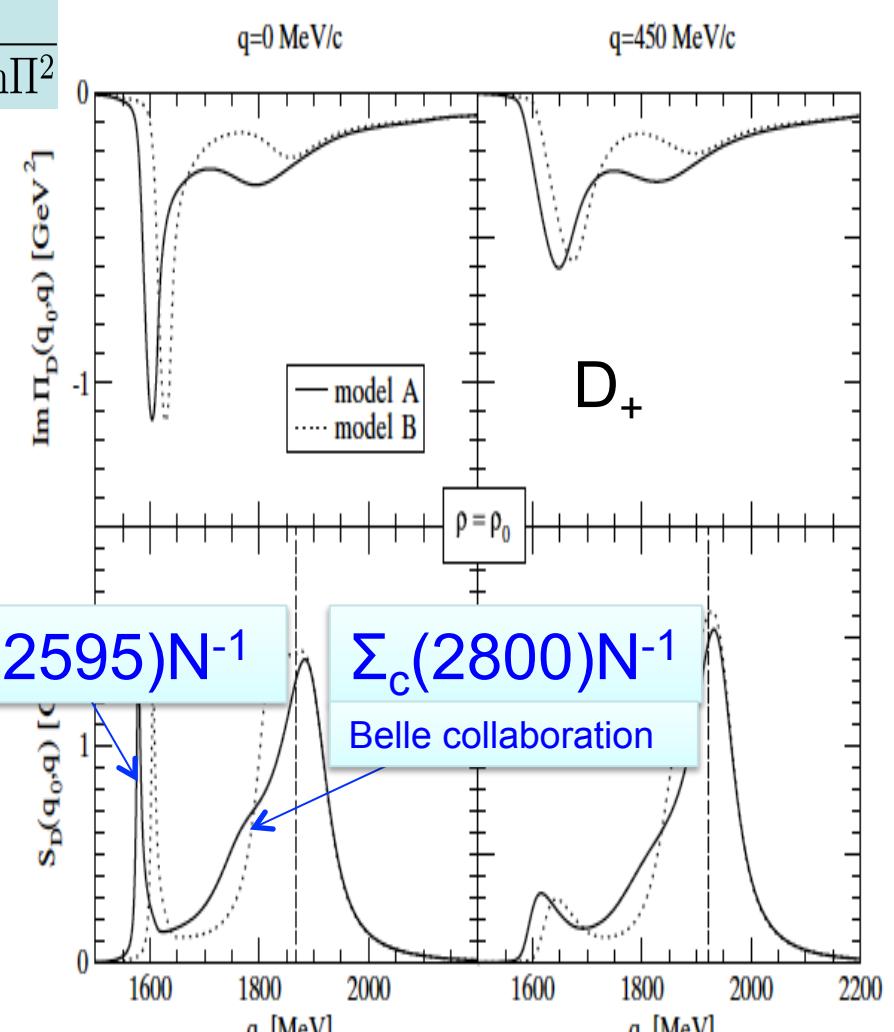

obtain the in-medium  
current-current correlation  
function for meson by  
applying operator product  
expansion and relate it to  
the spectral density

# Unitarized theory in matter: selfconsistent coupled-channel procedure (bare interaction saturated by t-channel vector-meson exchange)

Lutz, Korpa, Hofmann..

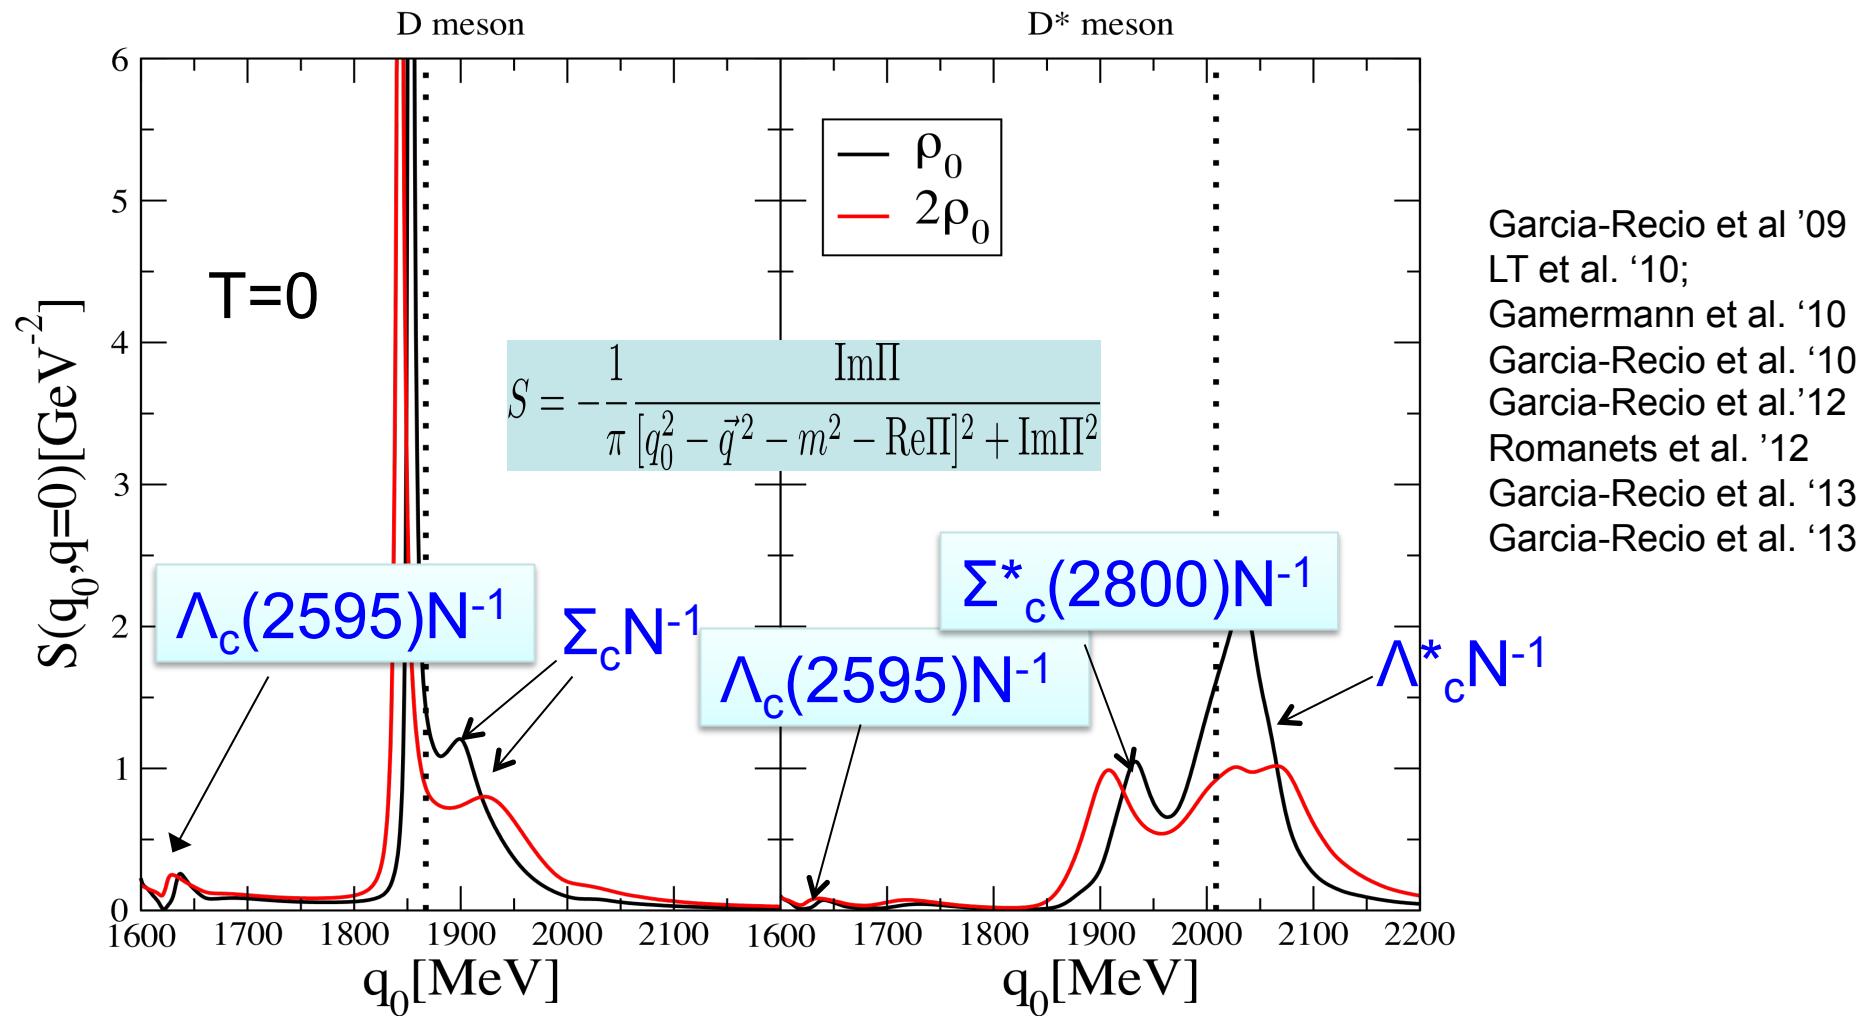

# Incorporate Heavy Quark Spin Symmetry

HQSS\*: spin interactions vanish for infinitely massive quarks

To construct a model for four flavors for **pseudoscalar and vector mesons as well as  $1/2^+$  and  $3/2^+$  baryons** that incorporates HQSS in the charm sector

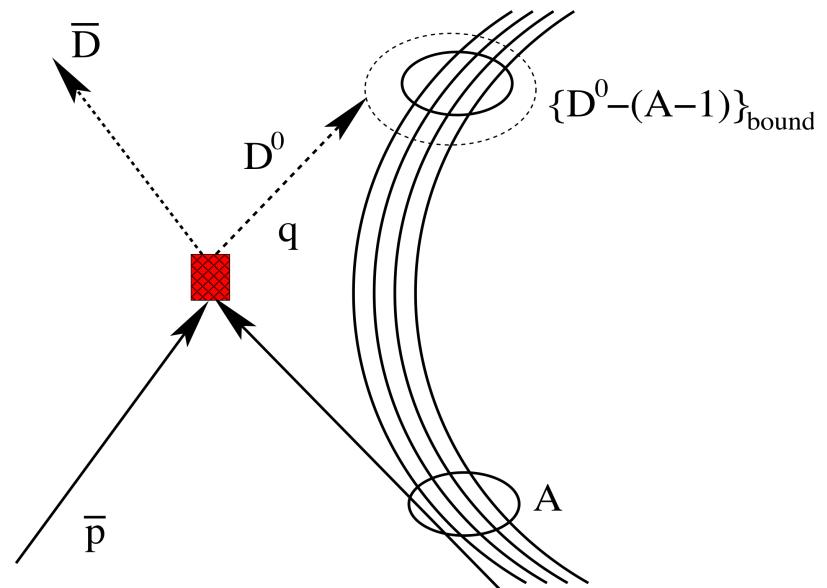

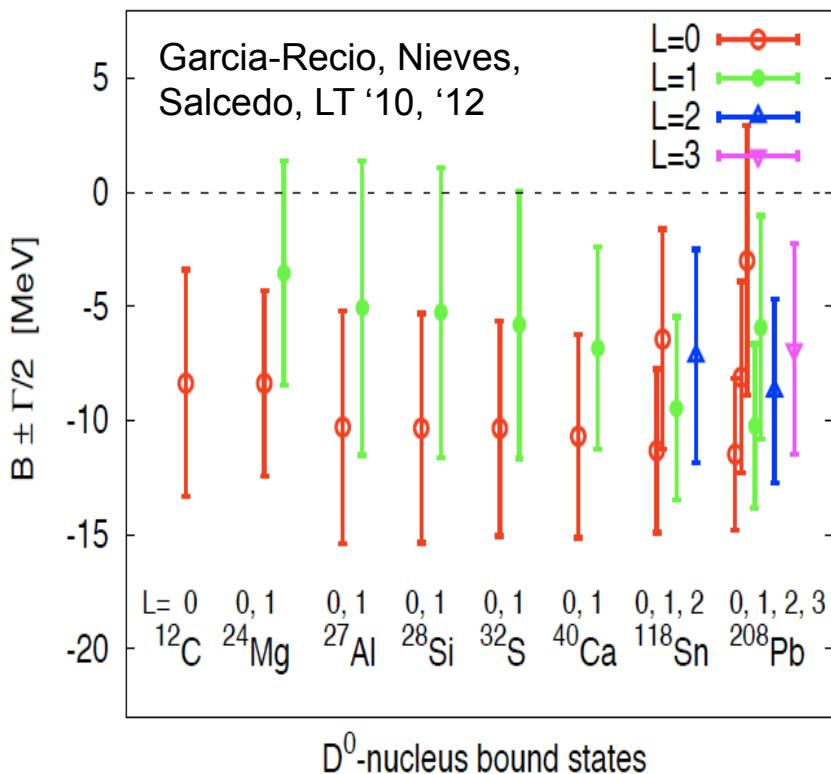

\*Isgur, Wise, Manohar, Neubert

# D mesic nuclei

Initially predicted in  $^{208}\text{Pb}$  within QMC model Tsushima et al. '99

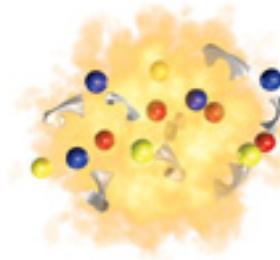

Within the self-consistent coupled-channel approach that incorporates HQSS

PANDA @FAIR?

Working on analyzing hidden charm states,  
eg.  $J/\psi$ ,  $\psi(3770)$ , ... in matter  
(at finite temperature) for  
**PANDA/CBM @ FAIR.**  
Signal for deconfinement?

# Present and Future

- it is an exciting moment
- moving from strangeness to charm
- a lot of theoretical effort is needed
- but in close connection to experiments
