

Cluster and shape in stable and unstable nuclei

Y. Kanada-En'yo (Kyoto Univ.)

Collaborators:

Y. Hidaka (GCOE-PD->Riken)

F. Kobayashi (D2, Kyoto Univ.)

T. Suhara (Kyoto Univ.->Tsukuba Univ.)

Y. Taniguchi (Tsukuba Univ.)

Introduction

Rich phenomena

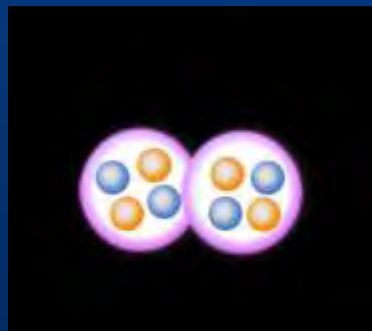

Neutron-rich

Deformation & vibration

Cluster structure

Cluster: sub unit of nucleons with spatial correlations

Neutron halo, skin

Nuclear system

Analogy & Differences

Electron motion

Confined by the external field

Nucleon motion

Self-bound

1. Independent-particle feature in self-consistent mean-field
2. Strong nucleon-nucleon correlations

cluster

Cluster

Nuclear system

1. Independent-particle feature in self-consistent mean-field
2. Strong nucleon-nucleon correlations

3. Saturation properties

Energy/nucleon \sim constant

Single-particle motion
v.s.
Many-body correlation

Rich phenomena

Cluster in low-lying excited states

Ground state

Excited state

Cluster states in low energy

Coexistence of cluster and MF features

Typical Cluster structures

cluster structures known in light stable nuclei

Rich phenomena in unstable nuclei

- New Facility (RIBF etc.)

Unbalanced
proton-neutron
ratio

Excitation energy

- * proton number
- * neutron number
- * Excitation energy

Theoretical Framework

Approach for nuclear structure to study
coexistence of cluster and mean-field
aspects

To study cluster and MF aspects

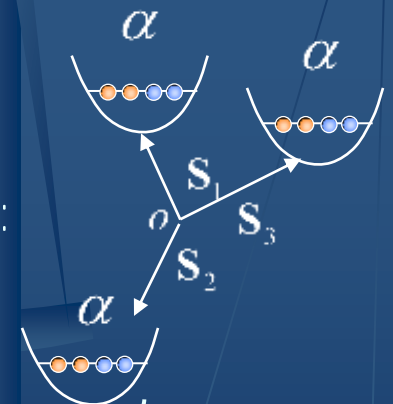

Shell-model, MF approaches

One-center basis expansion

Cluster models

Multi-center model:
Clusters a priori
assumed

AMD

Antisymmetrized molecular dynamics

Cluster and MF aspects, stable/unstable nuclei, cluster formation/breaking

AMD method for structure study

AMD wave fn.

$$\Phi = c\Phi_{\text{AMD}} + c'\Phi'_{\text{AMD}} + c''\Phi''_{\text{AMD}} + \dots$$

$$\Phi_{\text{AMD}} = \det \{ \varphi_1, \varphi_2, \dots, \varphi_A \} \quad \text{Slater det.}$$

Gaussian

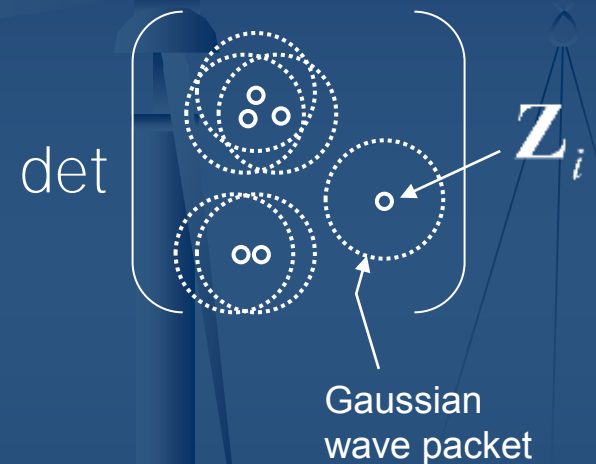

$$\varphi_i = \phi_{Z_i} \chi_i \begin{cases} \text{spatial} \\ \phi_{Z_i}(\mathbf{r}_j) \propto \exp \left[-v \left(\mathbf{r} - \frac{\mathbf{Z}_i}{\sqrt{v}} \right)^2 \right] \\ \chi_i = \begin{pmatrix} \frac{1}{2} + \xi_i \\ \frac{1}{2} - \xi_i \end{pmatrix} \times \begin{matrix} p \text{ or } n \\ \text{isospin} \end{matrix} \\ \text{Intrinsic spins} \end{cases}$$

$$\Phi_{\text{AMD}}(\mathbf{Z})$$

$$\mathbf{Z} = \{ \mathbf{Z}_1, \mathbf{Z}_2, \dots, \mathbf{Z}_A, \xi_1, \dots, \xi_A \}$$

Variational parameters:

Gauss centers, spin orientations

Energy Variation

$$\delta \frac{\langle \Phi | H | \Phi \rangle}{\langle \Phi | \Phi \rangle} = 0$$

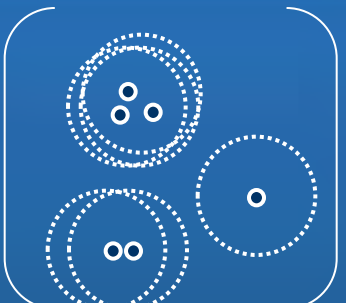

Model wave fn. Φ

Effective nuclear force
(phenomenological)

$$H^{\text{eff}} = \sum_{i=1} t_i + \sum_{i < j} v_{ij}^{\text{eff}} + \sum_{i < j < k} v_{ijk}^{\text{eff}}$$

AMD model space

det

A variety of cluster st.

Cluster and MF formation/breaking

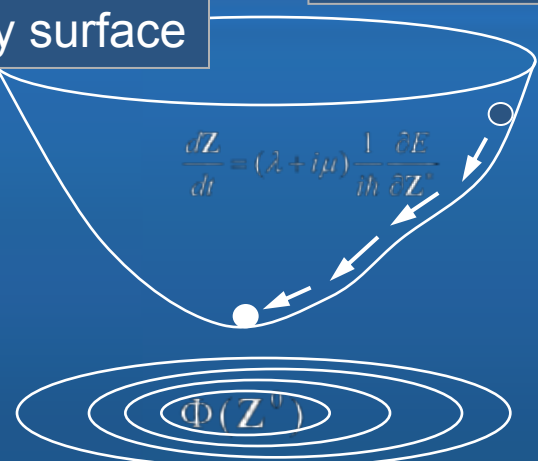

det

Shell structure

Energy variation

Energy surface

$$\frac{dZ}{dt} = (\lambda + i\mu) \frac{1}{m} \frac{\partial E}{\partial Z}$$

Model space (Z plane)

Randomly chosen Initial states

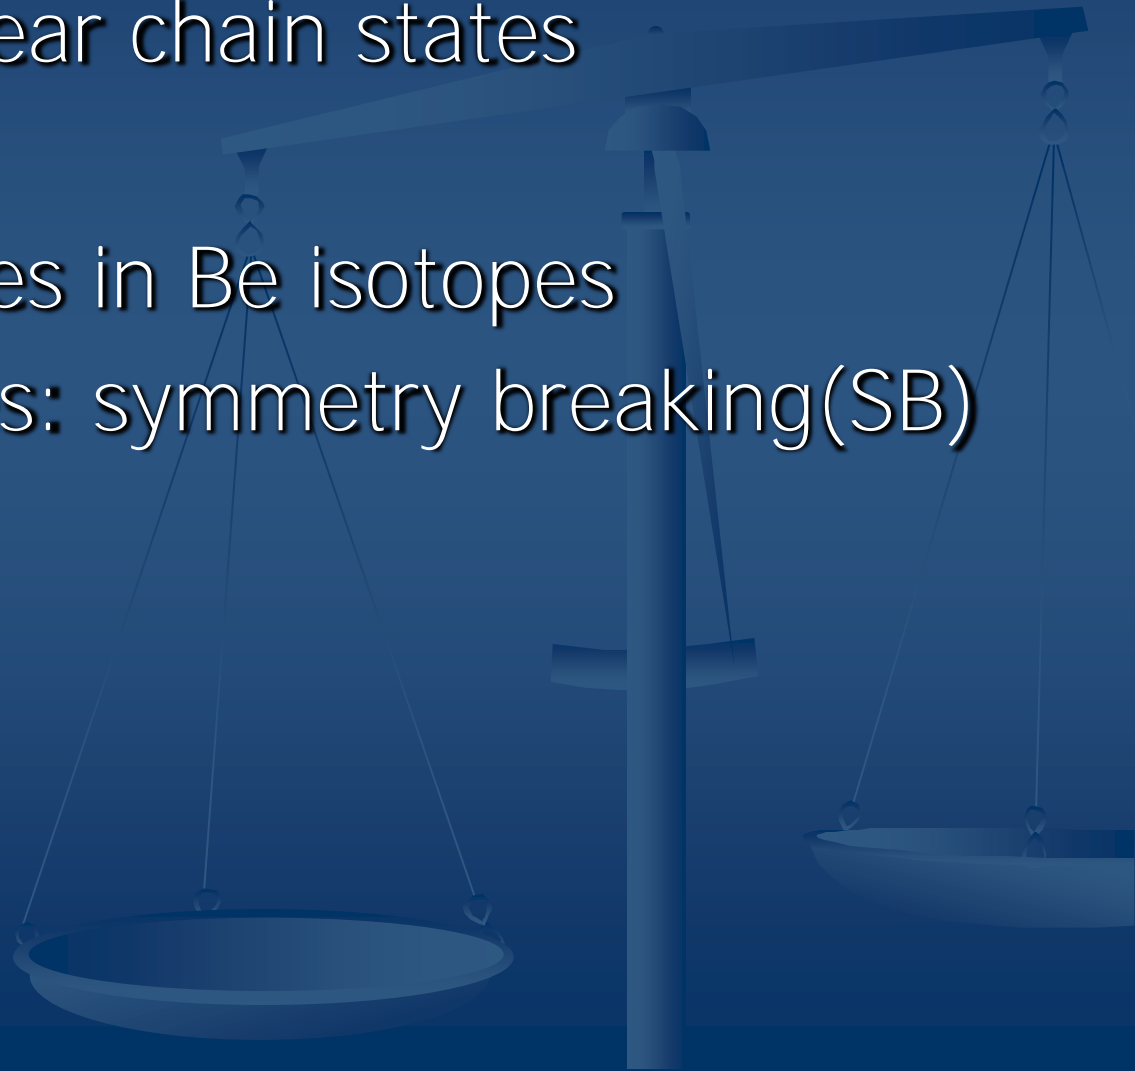

Energy minimum states

Some topics of cluster phenomena

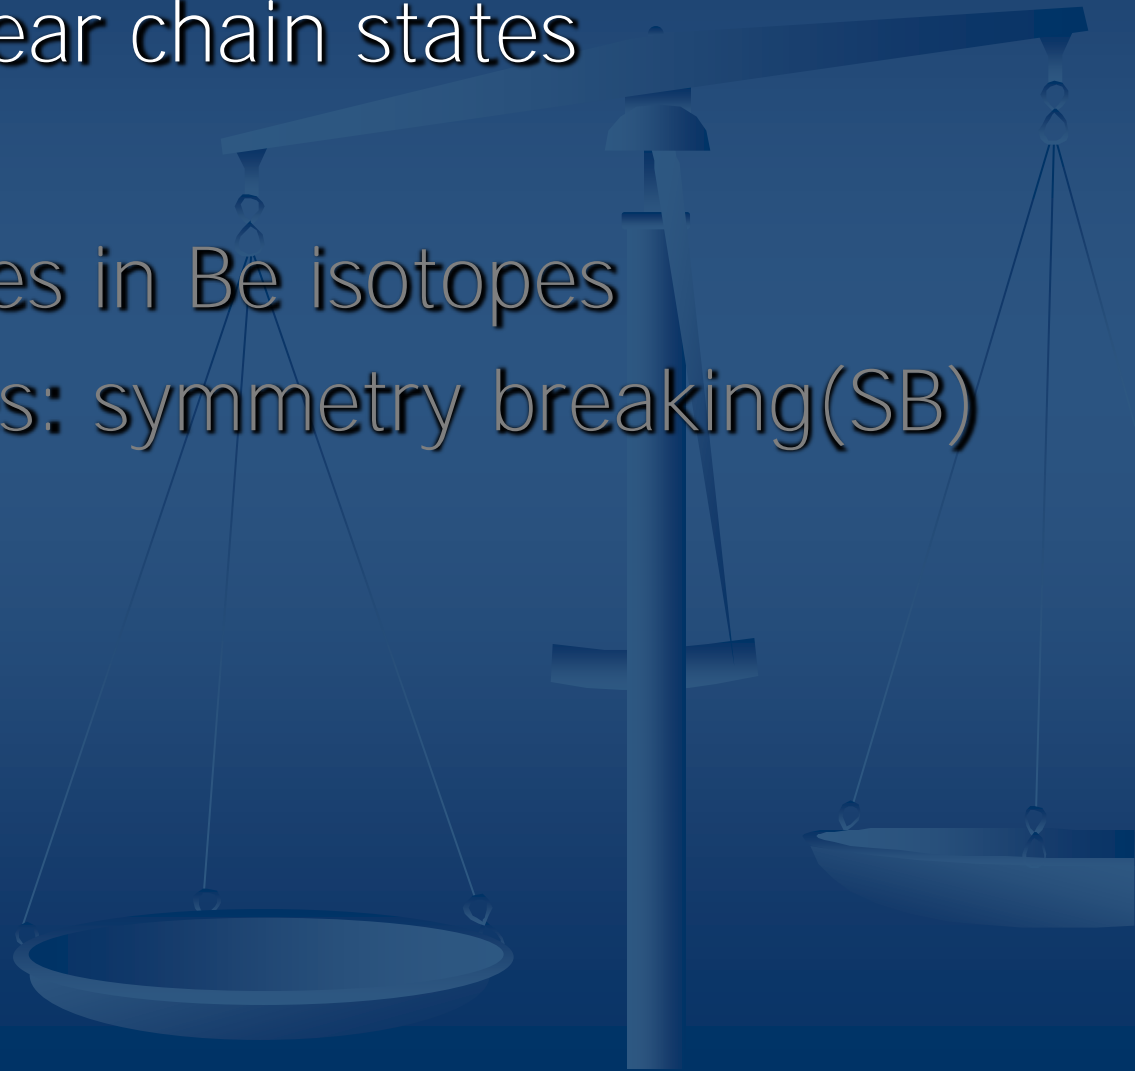

Topics of cluster phenomena

- Cluster gas, Linear chain states in C isotopes
- Cluster structures in Be isotopes
- Cluster & shapes: symmetry breaking(SB) and restoration

Topics of cluster phenomena

- Cluster gas, Linear chain states in C isotopes
- Cluster structures in Be isotopes
- Cluster & shapes: symmetry breaking(SB) and restoration

Cluster gas states in excited states

^{12}C

Tohsaki et al.(2001),Funaki et al. (2003)

Dilute cluster gas

Bosonic behavior:

α particles condensate in the same orbit.

BEC in nuclear matter

Roepke et al., PRL(1998)

2 α +t cluster in $^{11}\text{B}(3/2^-_3)$

AMD by Y.K-E., Suhara

^{12}C

similar cluster
gas of 2 α +t ?

$^{11}\text{B}, ^{11}\text{C}$

PRC75, 024302 (2007)

Dineutron at surface of
neutron-rich nuclei

by F. Kobayashi PTP126, 457 (2011)

Topics of cluster phenomena

- Cluster gas, Linear chain states in C isotopes
- Cluster structures in Be isotopes
- Cluster & shapes: symmetry breaking(SB) and restoration

Cluster structure in neutron-rich Be

Excitation
energy

Molecular orbital(MO) structure in Be

Von Oertzen et al., N. Itagaki et al.,
Y. K-E. et al.

2 α -core formation

MO state

Gain kinetic energy
in developed 2 α system

MO formation

Normal state

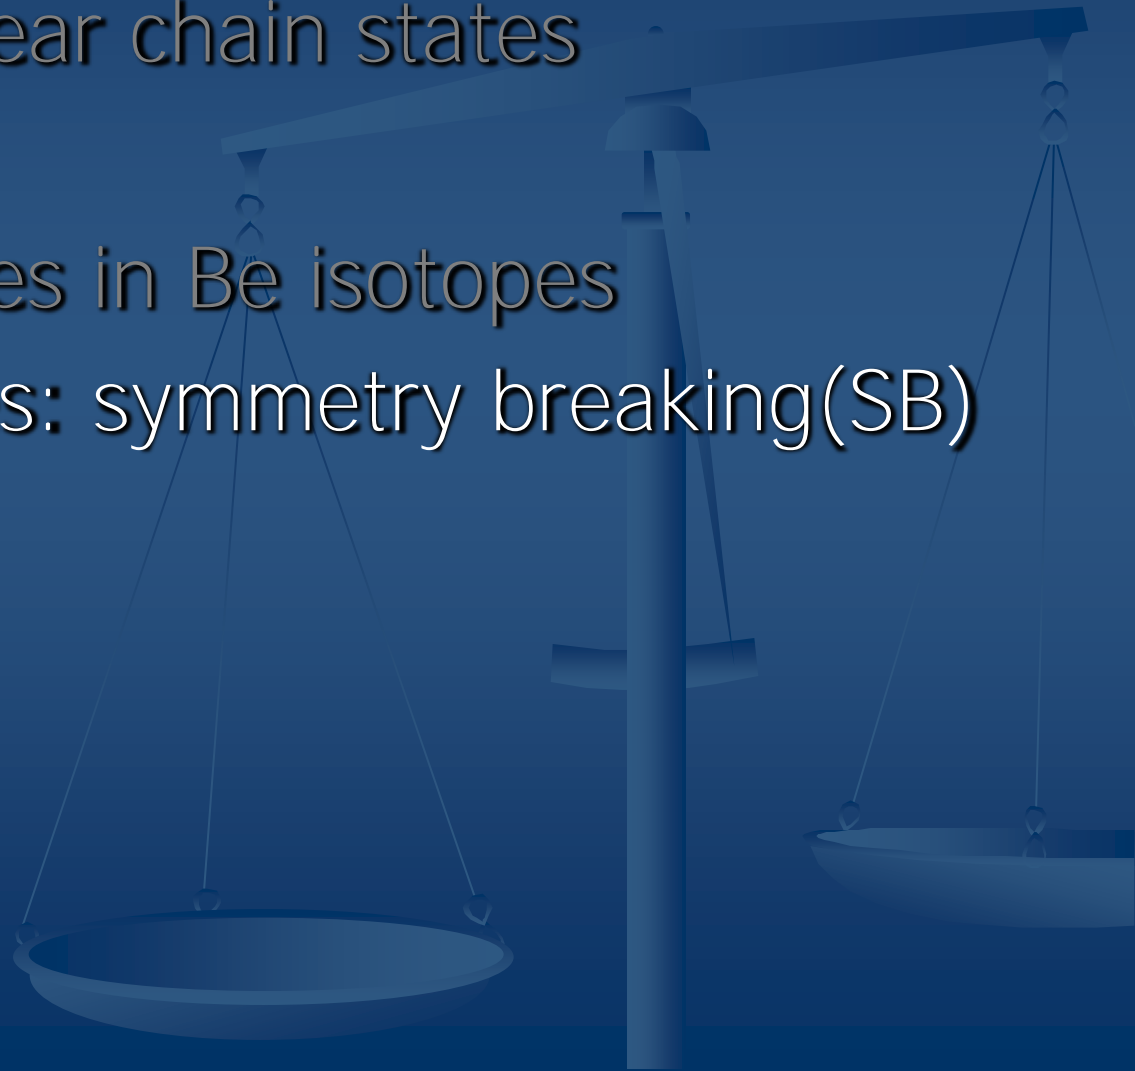

π -orbital

Low-lying
MO states

vanishing of magic number N=8 in ^{11}Be , ^{12}Be , ^{13}Be

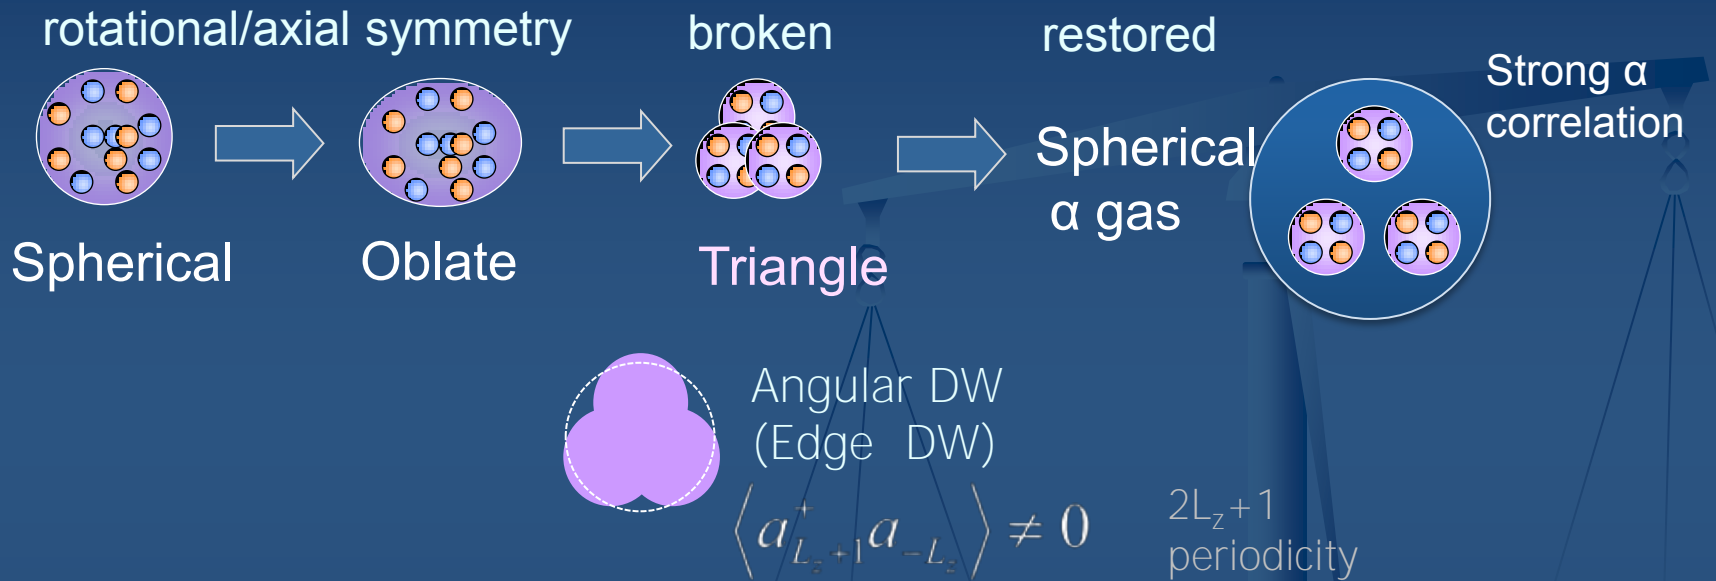

Topics of cluster phenomena

- Cluster gas, Linear chain states in C isotopes
- Cluster structures in Be isotopes
- Cluster & shapes: symmetry breaking(SB) and restoration

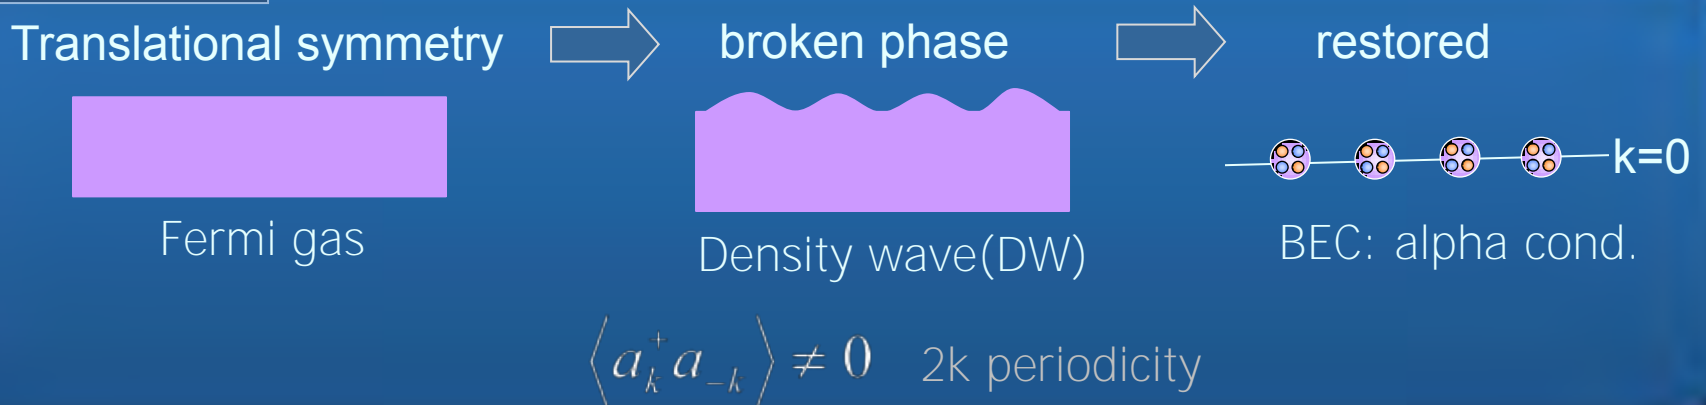

Cluster correlation and SB

Y. K-E. and Y. Hidaka, PRC84, 014313 (2011)

Infinite matter

Summary

- Coexistence of cluster and MF aspects brings variety of structures.
- Topics of cluster phenomena in stable and unstable nuclei:
Cluster gas, Linear chain, molecular orbital etc.
Cluster and symmetry breaking
- In studies of unstable nuclei, further rich phenomena will be discovered as functions of proton/neutron numbers and excitation energy.
- Analogy with other quantum many-fermion systems (cold atoms, quark systems)
