

# Nuclear Reactions

Shape, interaction, and excitation structures of nuclei ← scattering expt.  
cf. Experiment by Rutherford ( $\alpha$  scatt.)

[http://www.th.phys.titech.ac.jp/~muto/lectures/QMII11/QMII11\\_chap21.pdf](http://www.th.phys.titech.ac.jp/~muto/lectures/QMII11/QMII11_chap21.pdf)

## Nuclear fusion reactions

# Why subbarrier fusion?

Two obvious reasons:

discovering new elements  
(SHE by cold fusion reactions)

NASA, Skylab space station December 19, 1973, solar flare reaching 588 000 km off solar surface

nuclear astrophysics  
(fusion in stars)

# Heavy-ion subbarrier fusion reactions

## Inter-nucleus potential

- above barrier
- sub-barrier
- deep subbarrier

Two forces:

### 1. Coulomb force

Long range,  
repulsive

### 2. Nuclear force

Short range,  
attractive

Potential barrier due to the compensation between the two  
(Coulomb barrier)

## Fusion cross sections at subbarrier energies

Fusion cross sections of structure-less nuclei (a potential model)

Simple potential model:

- OK for relatively light systems
- underestimates  $\sigma_{\text{fus}}$  for heavier systems at subbarrier energies

Strong target dependence at  $E < V_b$

low-lying collective excitations?

(MeV)

1.81 —  $3^-$   
1.66 —  $2^+$

(MeV)

1.18 —  $4^+$   
1.16 —  $3^-$

(MeV)

0.90 —  $8^+$   
0.54 —  $6^+$   
0.27 —  $4^+$   
0.082 —  $2^+$   
0 —  $0^+$

0 —  $0^+$   
 $^{144}\text{Sm}$

0 —  $0^+$   
 $^{148}\text{Sm}$

$^{154}\text{Sm}$

# Effect of deformation on subbarrier fusion

## Excitation spectra of $^{154}\text{Sm}$

cf. Rotational energy of a rigid body  
(Classical mechanics)

$$E = \frac{1}{2} \mathcal{J} \omega^2 = \frac{I^2}{2\mathcal{J}}$$

$$(I = \mathcal{J} \omega, \omega = \dot{\theta})$$

$^{154}\text{Sm}$  is deformed

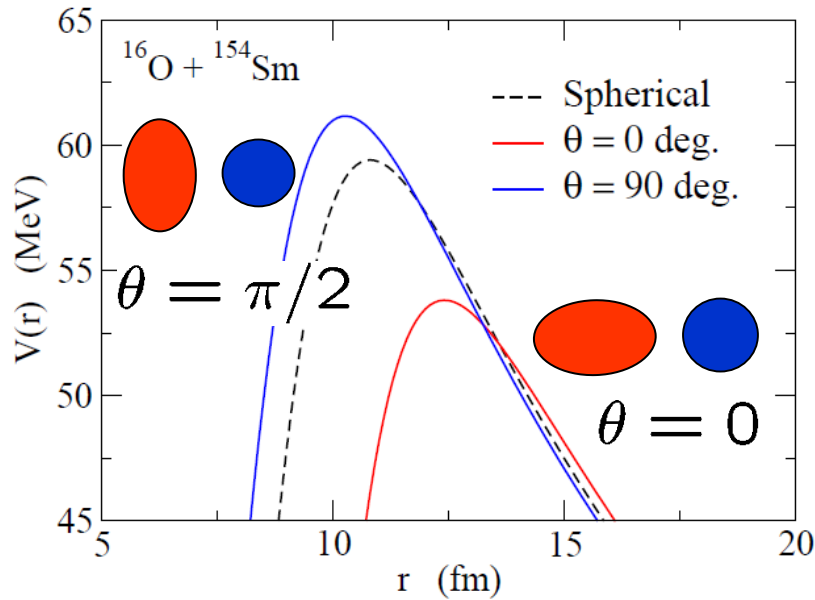

$$E_I \sim \frac{I(I+1)\hbar^2}{2\mathcal{J}}$$

$$\sigma_{\text{fus}}(E) = \int_0^1 d(\cos \theta) \sigma_{\text{fus}}(E; \theta)$$

The barrier is lowered for  $\theta=0$  because an attraction works from large distances.

The barrier increases for  $\theta=\pi/2$ . because the rel. distance has to get small for the attraction to work

**Def. Effect:** enhances  $\sigma_{\text{fus}}$  by a factor of 10 ~ 100

**Fusion:** interesting probe for nuclear structure

# Physics of superheavy elements
