

The 4th J-PARC Symposium, Mito, Japan, 2024/10/15

Physics of
J-PARC Heavy-Ion Project

Masakiyo Kitazawa

(YITP, Kyoto)

for J-PARC-HI Collaboration

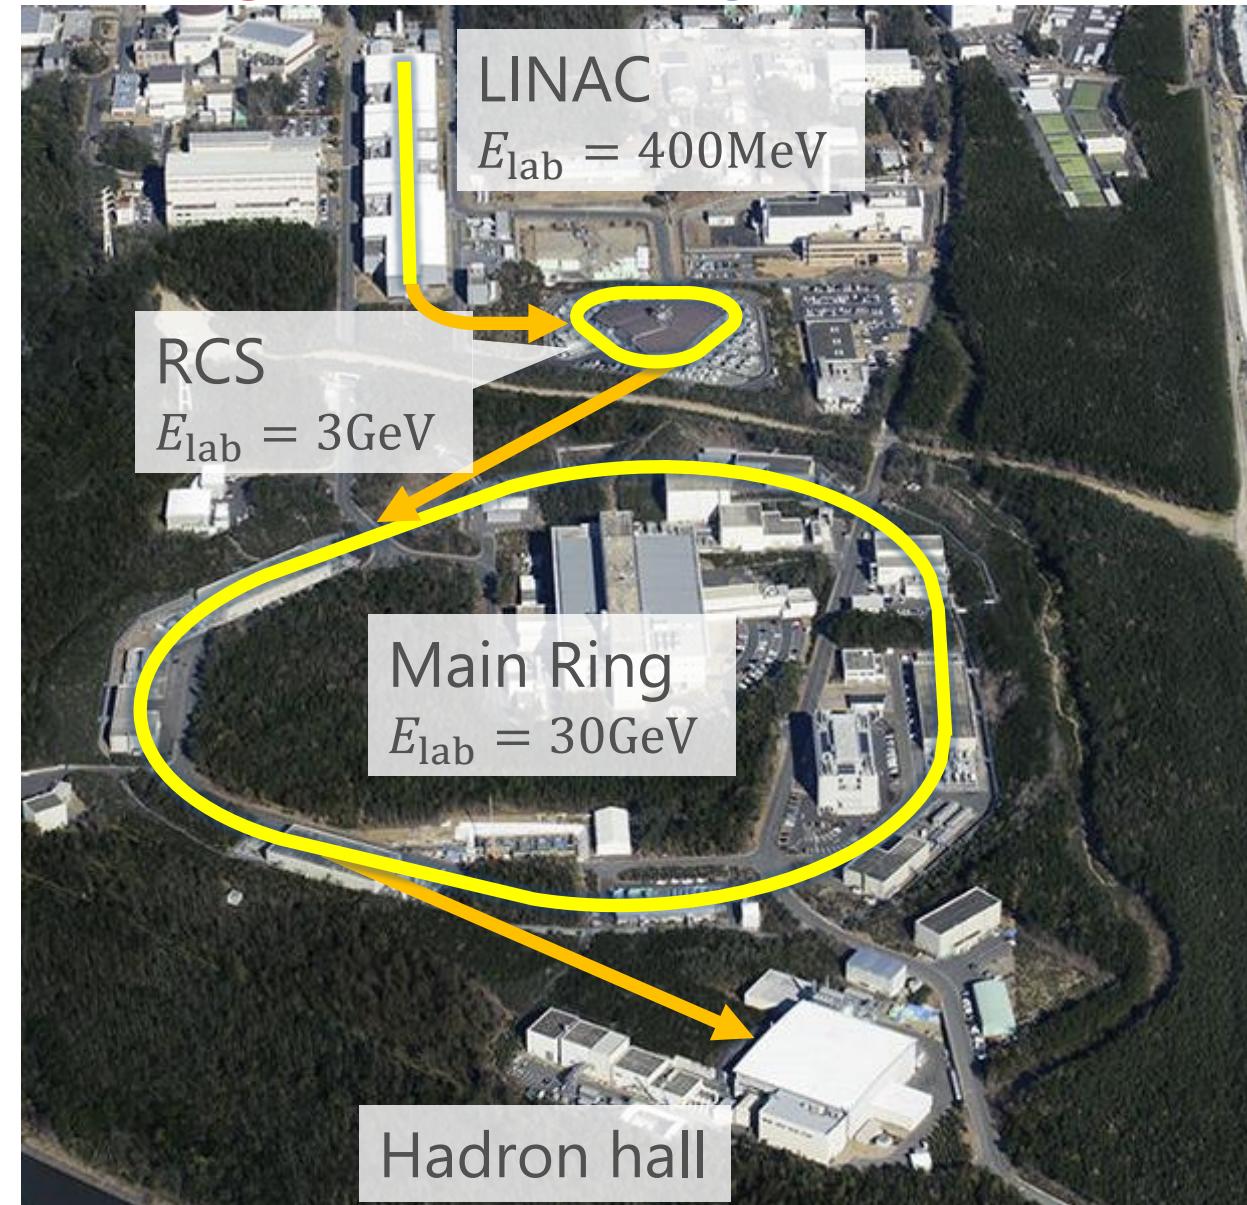

Imagine J-PARC 20 years from now!

New experiments with **heavy-ion beams**
will enrich the future of J-PARC.

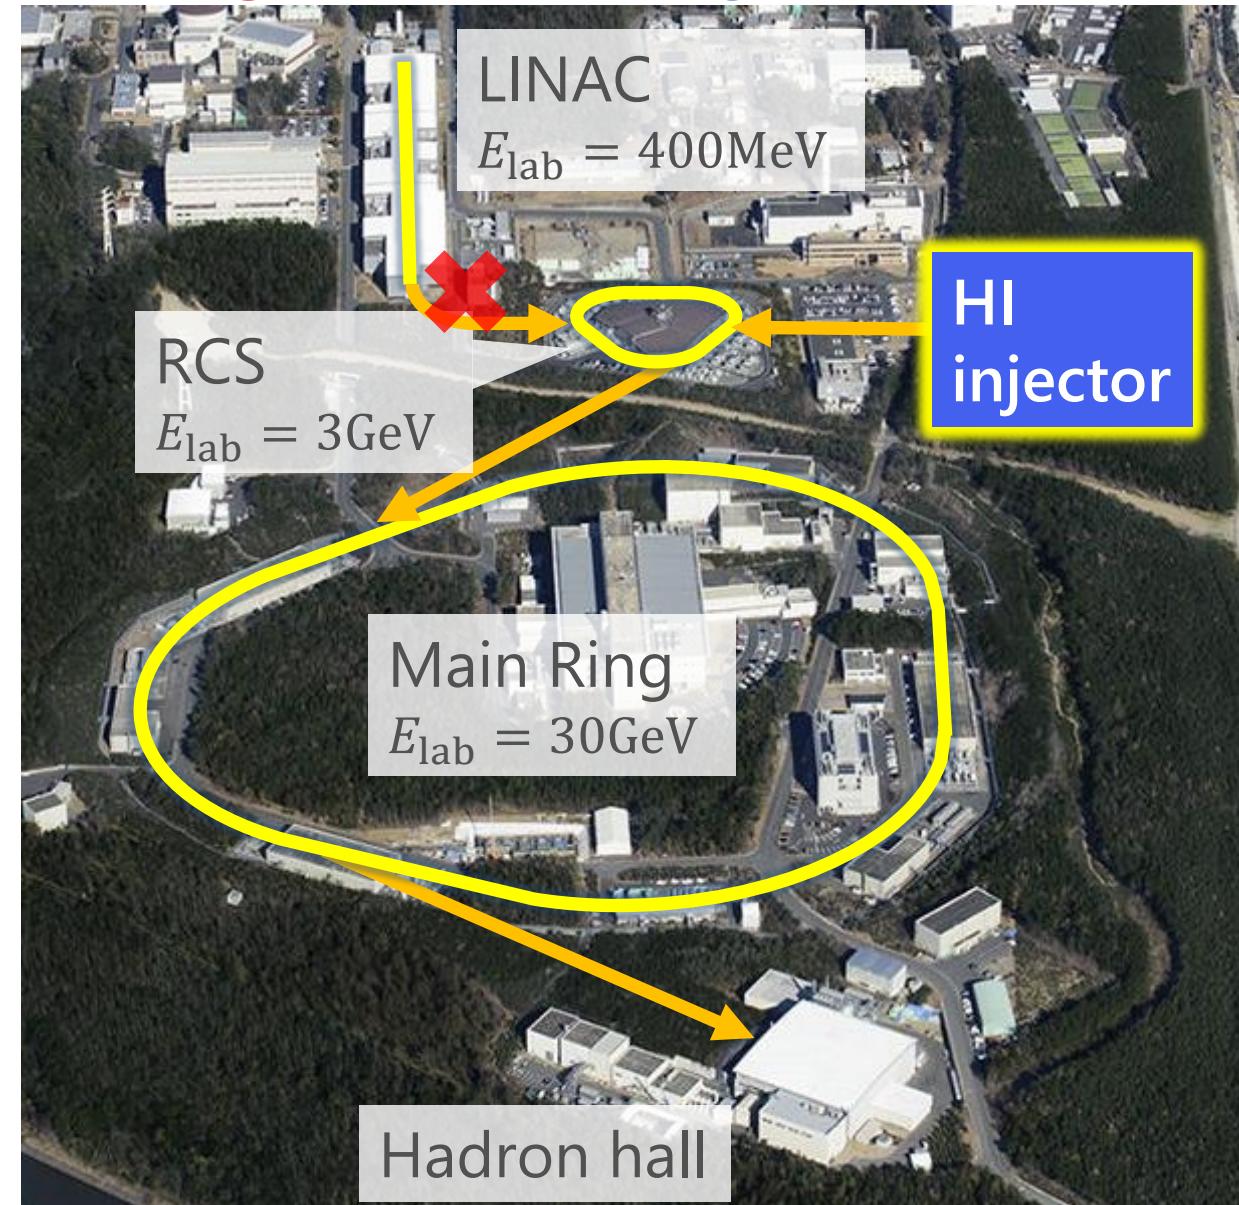

J-PARC-HI = J-PARC Heavy-Ion Project

- New HI injector + existing accelerators (**RCS, MR**)
- Heavy-ion beams with **world highest luminosity**
- Realize various new experiments at J-PARC

J-PARC-HI = J-PARC Heavy-Ion Project

- New HI injector + existing accelerators (**RCS, MR**)
- Heavy-ion beams with **world highest luminosity**
- Realize various new experiments at J-PARC

Who am I??

Masakiyo Kitazawa

Yukawa Institute for Theoretical Physics, Kyoto U.

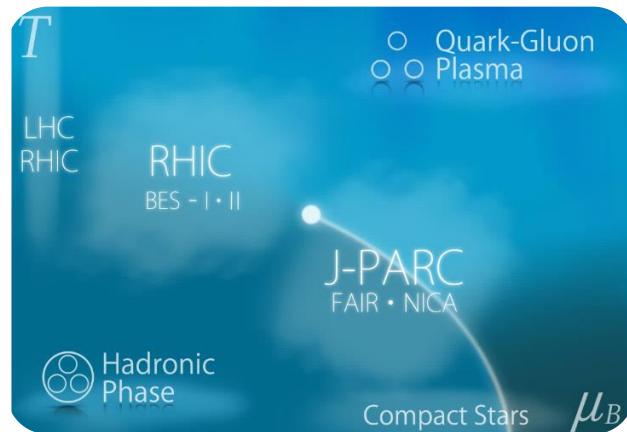

Working with J-PARC-HI since 2014

Research Interests:

- QCD in medium
- Relativistic heavy-ion collisions
- Lattice QCD Monte-Carlo simulations

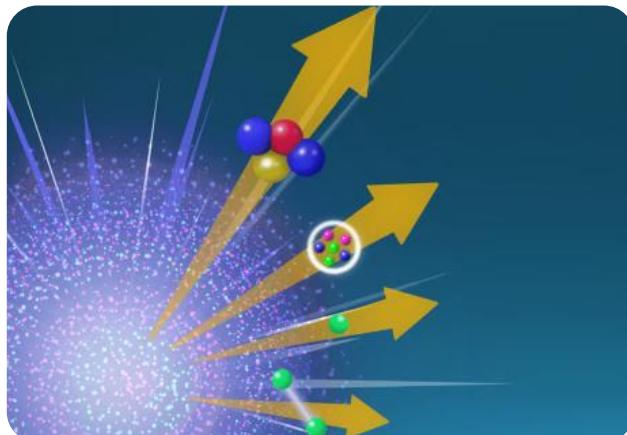

Relativistic HI Collisions at J-PARC: Physics Goals

Exploring extremely dense medium

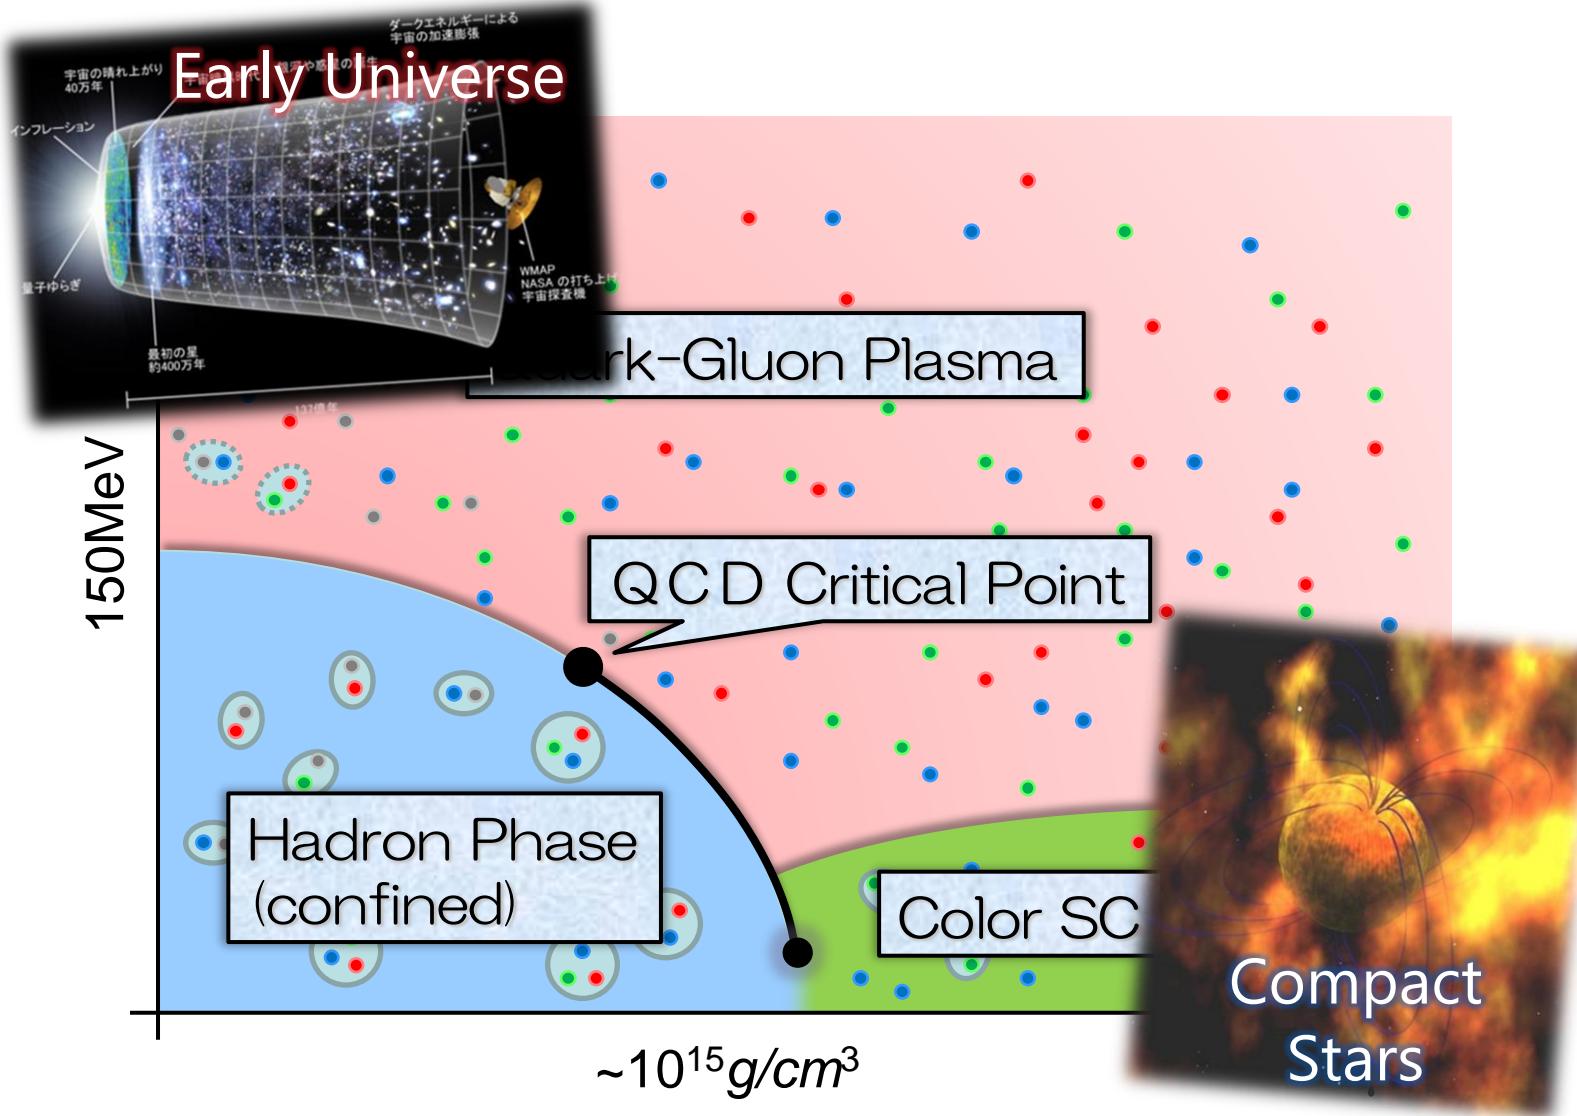

- QCD phase transitions
- Equation state for neutron stars

Hadron/hypernuclear physics

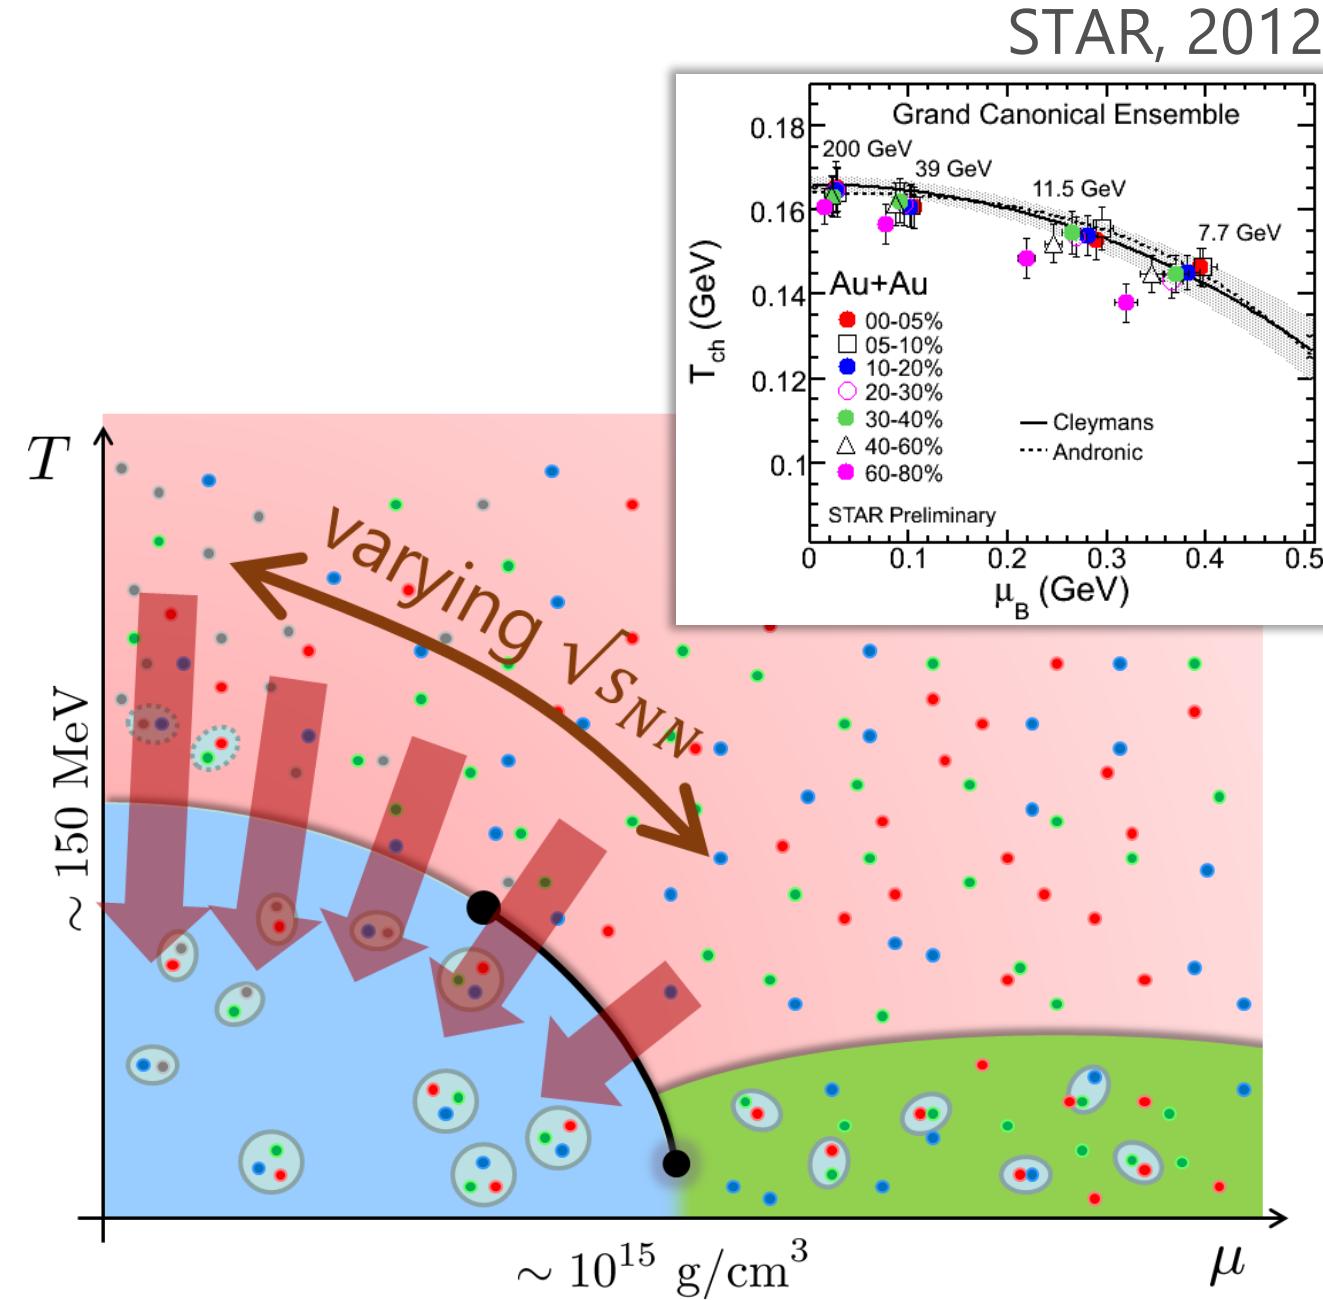

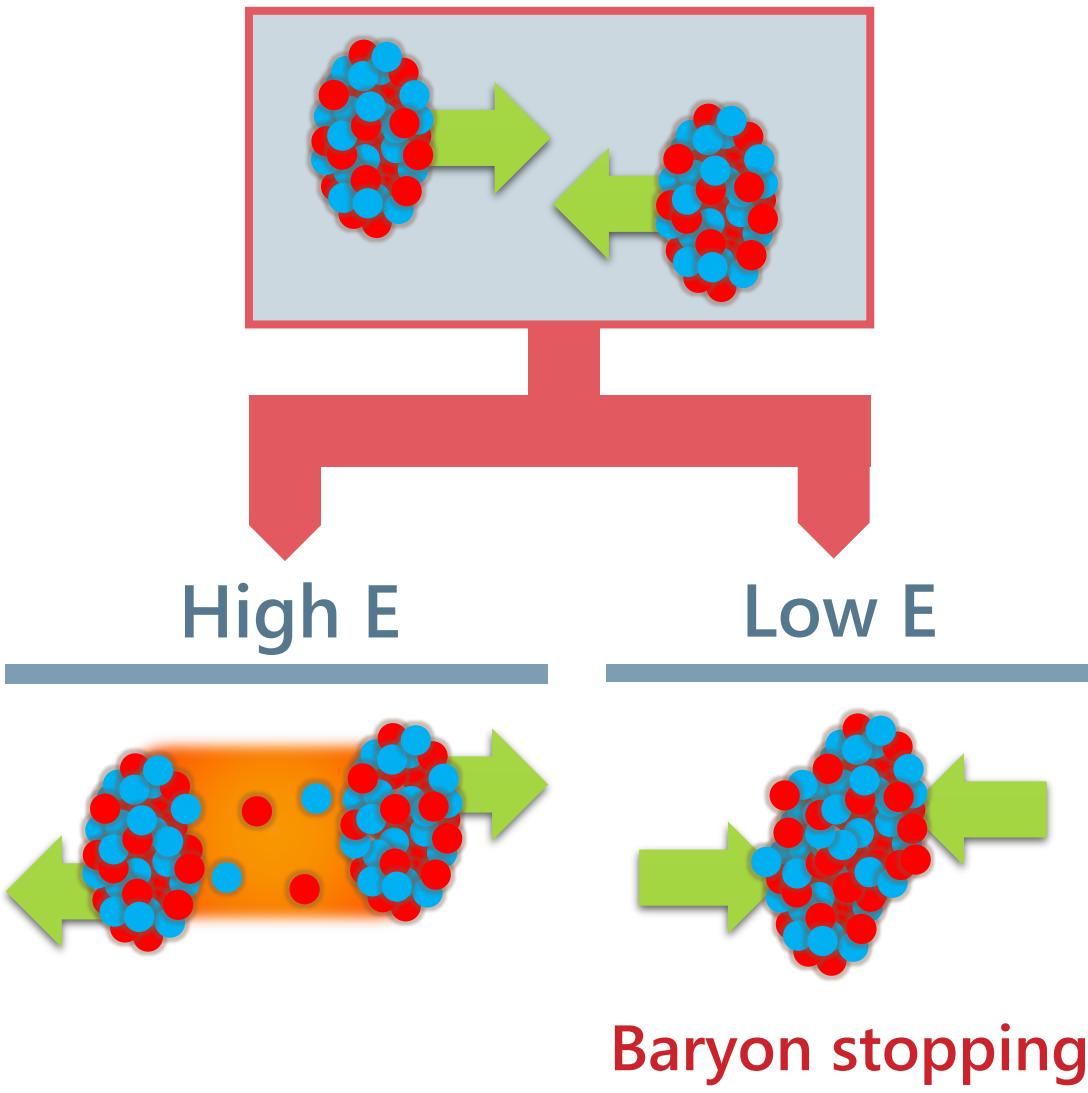

- Hadron interaction/structure
- Search for rare events
- Hypernuclear physics

QCD Phase Diagram

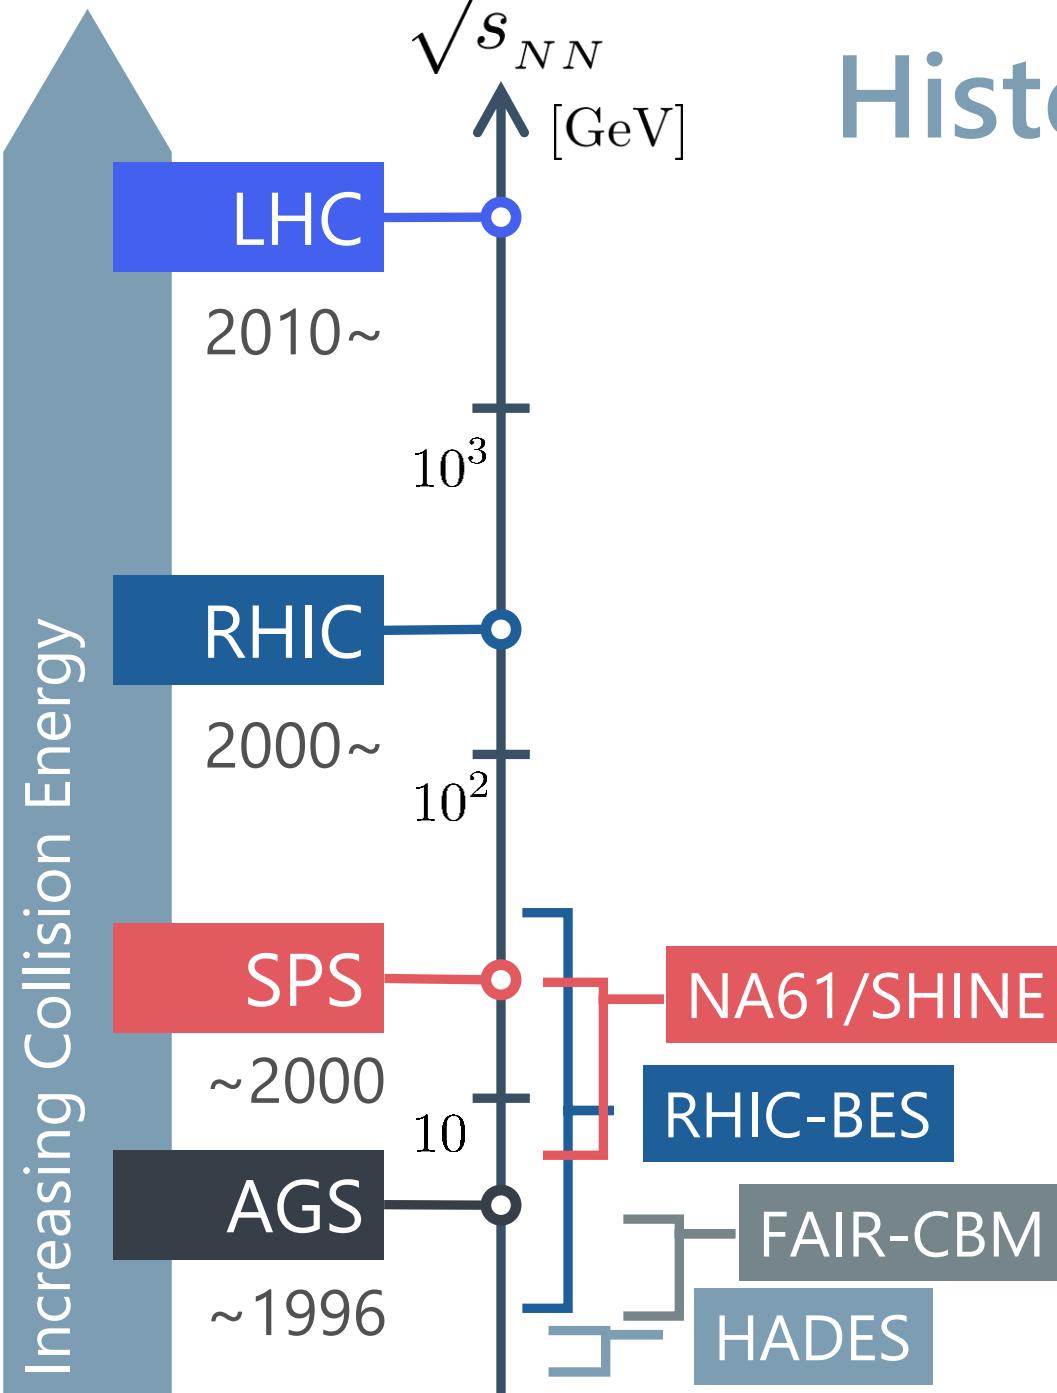

- Crossover at zero density
- Possible **first-order transition** and **QCD critical point** in dense region
- Multiple QCD-CP? MK+ ('02)
- **Color superconducting phases** in dense and cold quark matter

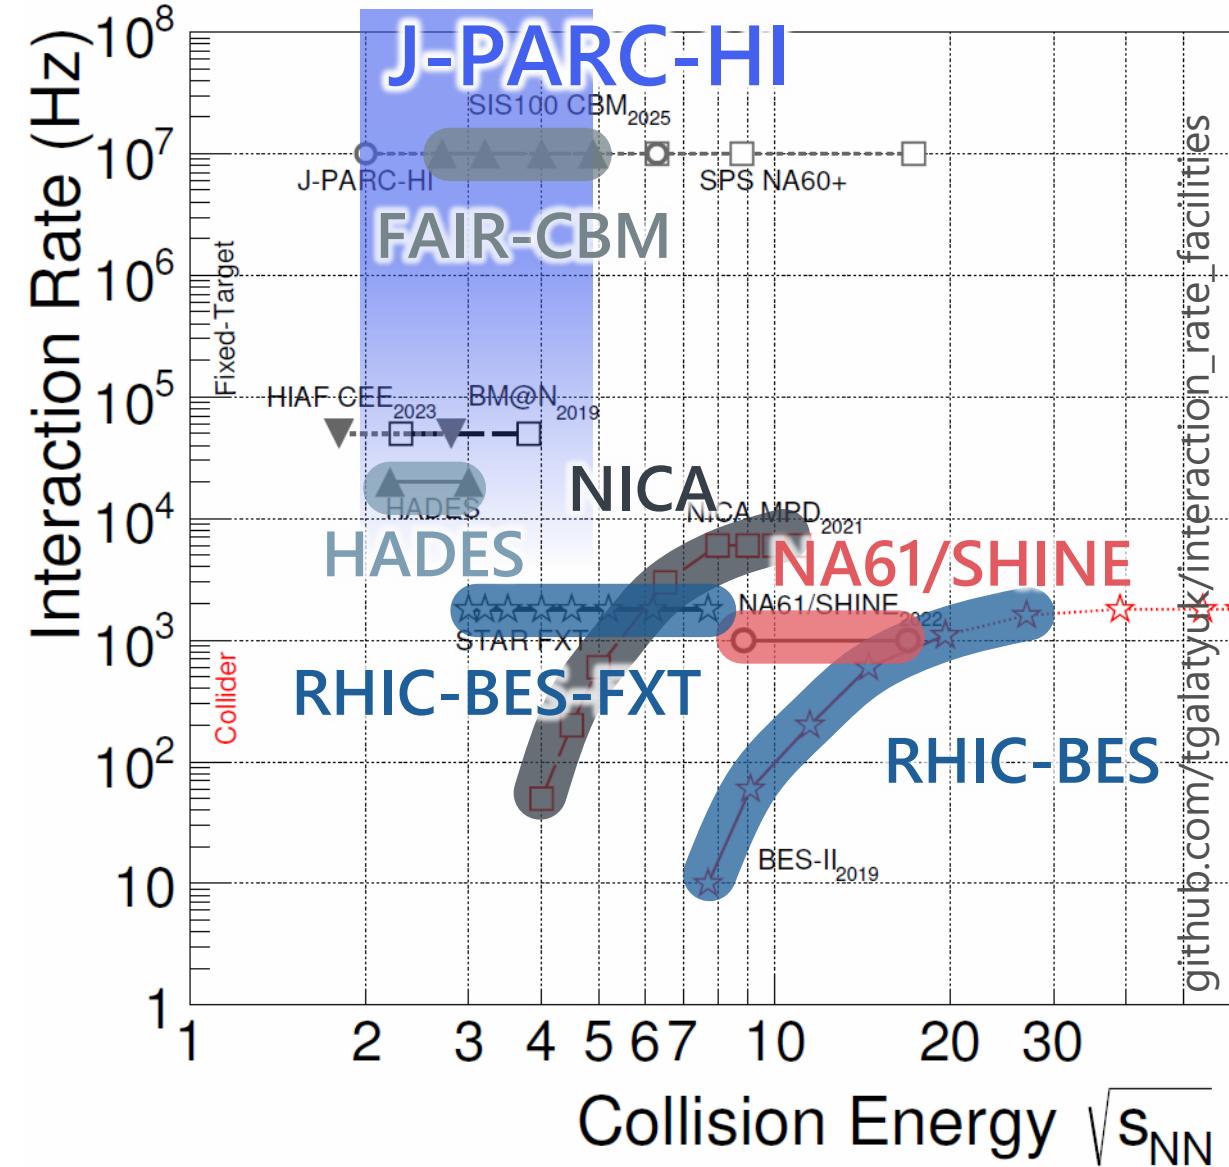

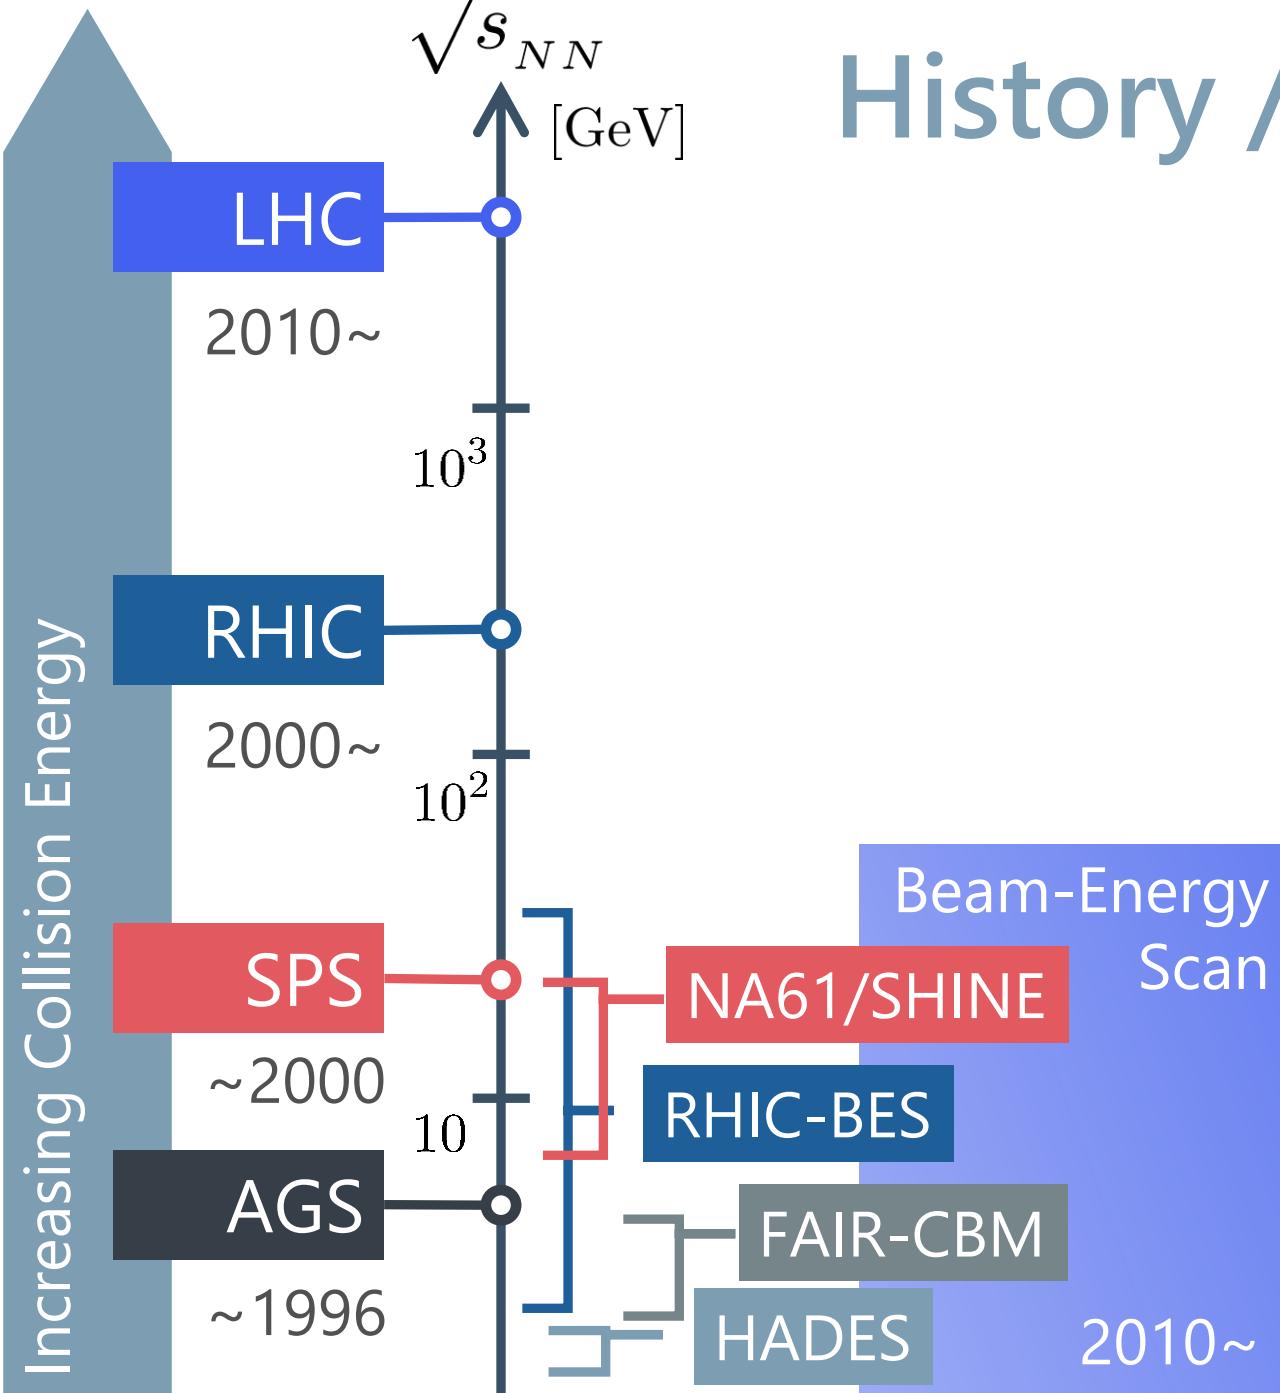

Beam-Energy Scan

History / Current Status of HIC

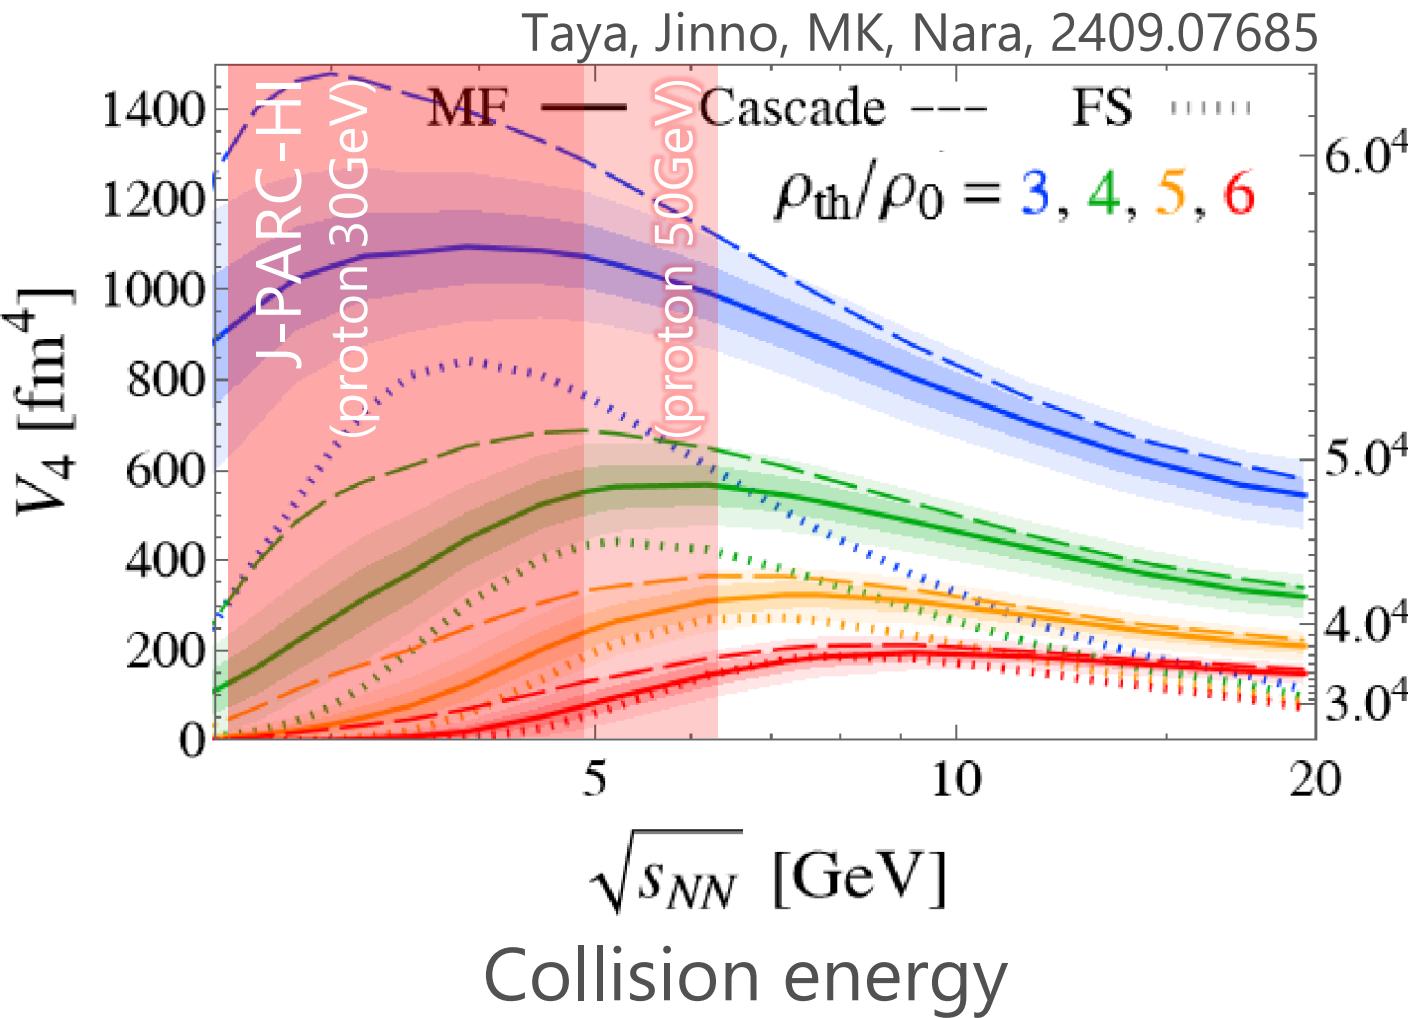

History / Current Status of HIC

How High Density? Where is optimal $\sqrt{s_{NN}}$?

Four-volume of high-density region

Medium with $\rho > 3\rho_0$ can be formed for $V_4 \simeq (6 \text{ fm})^4$ at J-PARC-HI energy

The density is comparable with the cores of neutron stars

J-PARC-HI = experiments to create **the highest baryon-density matter in the Universe**

Quark-G
Plasma

J-PARC
FAIR • NICA

Compact Stars

Exploring Dense Medium

Equation of state

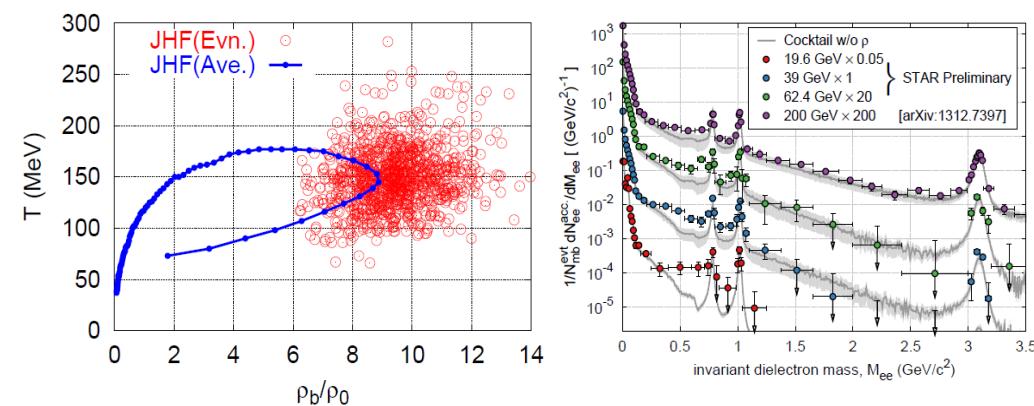

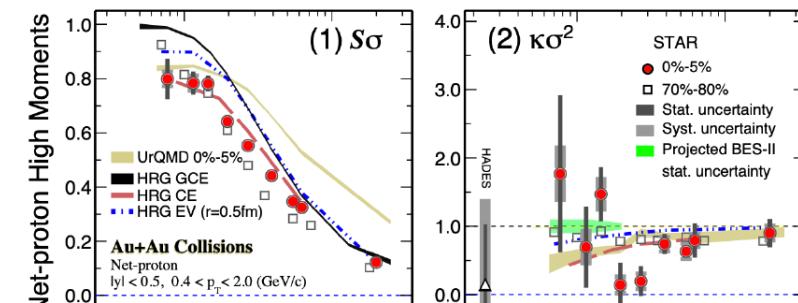

QCD critical point /
1st order transition /
Color superconductivity

Dilepton production rate

Event selection /
Higher correlations

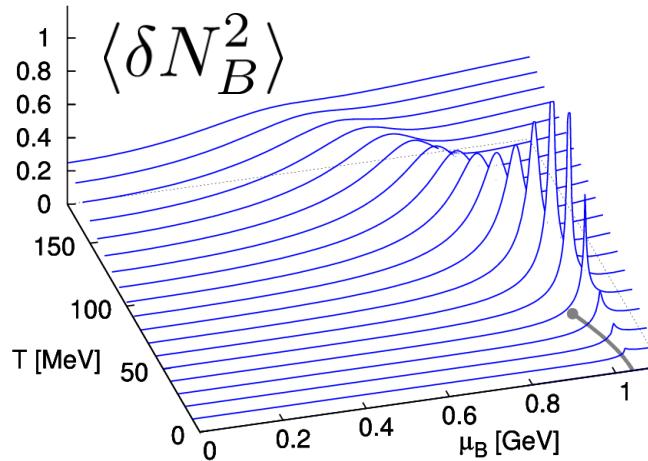

Event-by-event Fluctuations

Theoretical Predictions
on conserved charge fluctuations

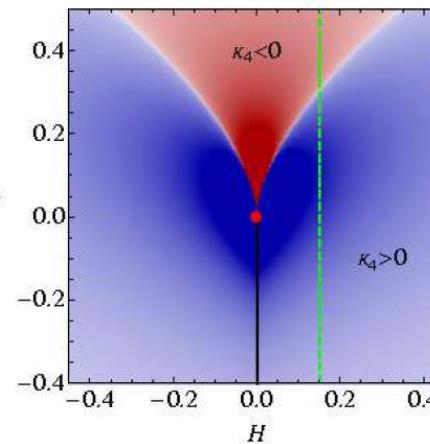

Experimental Result

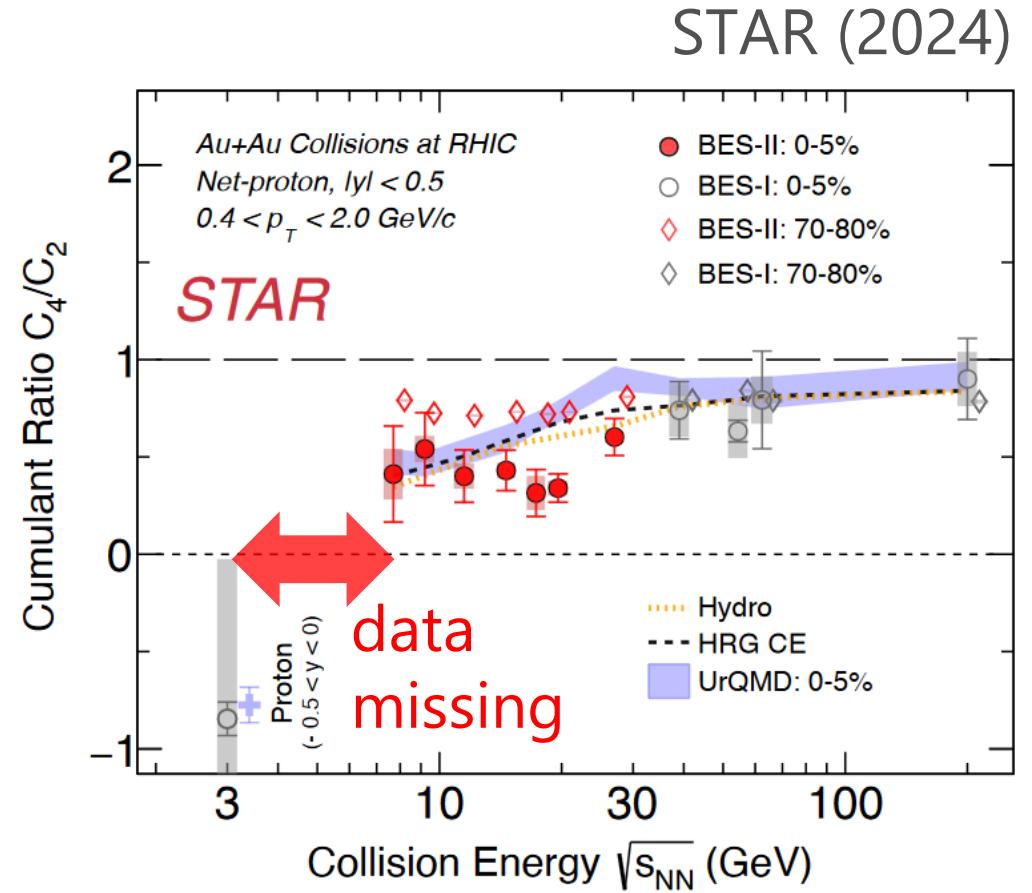

- Higher-order cumulants
- Signal of QCD CP

Asakawa, Ejiri, MK (2009)

Stephanov (2011)

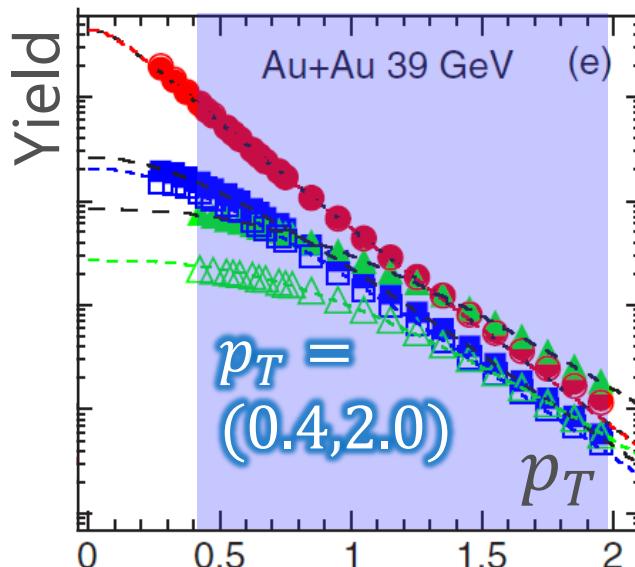

Baryon/Charge Cumulant Ratio

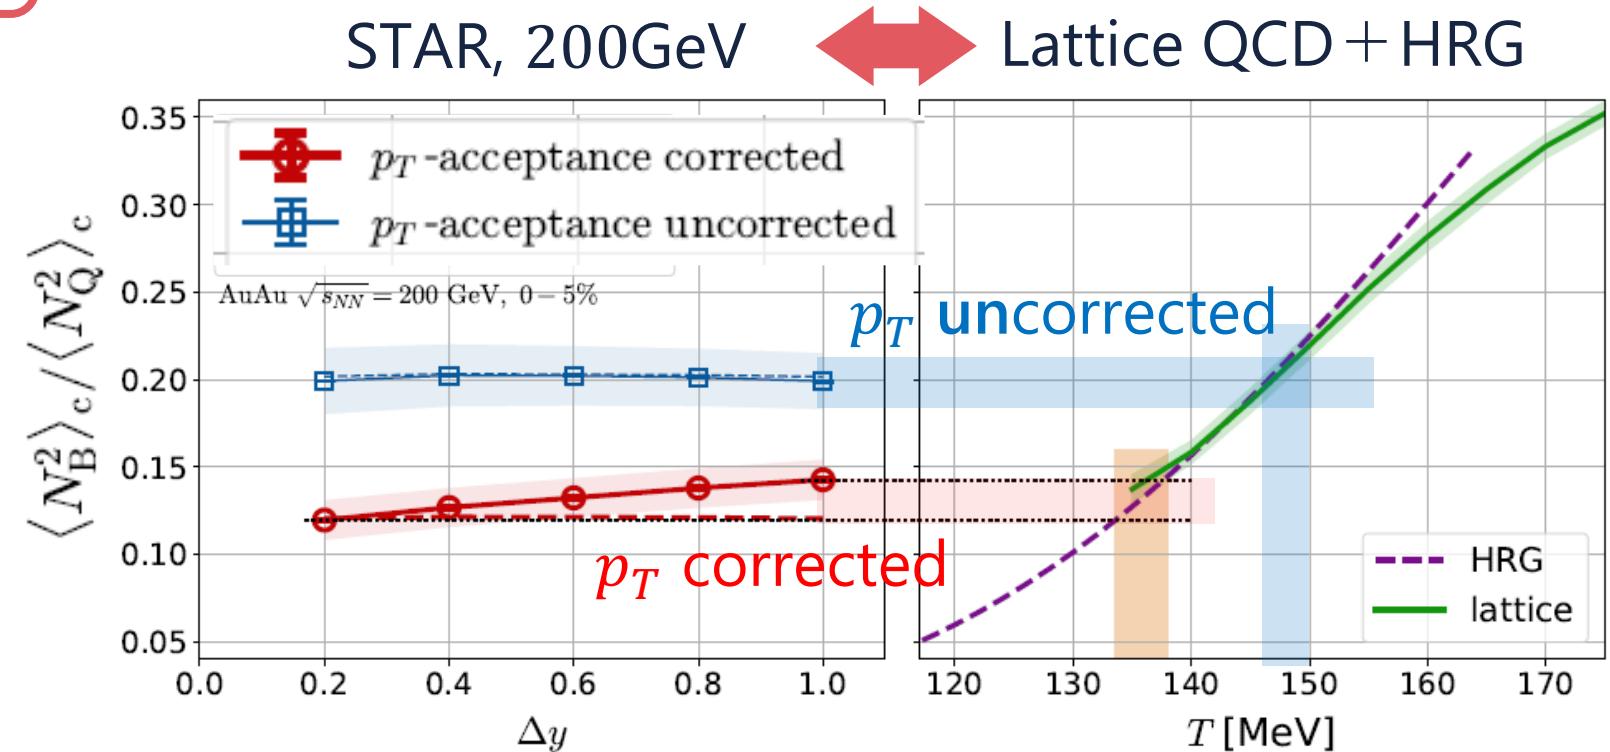

$$\langle N_B^2 \rangle_c / \langle N_Q^2 \rangle_c \simeq \chi_2^B / \chi_2^Q$$

MK, Esumi, Nonaka, Nucl. Phys. A, 2023

p_T -acceptance correction

- { — Electric charge: 49%
- Protons: 82%

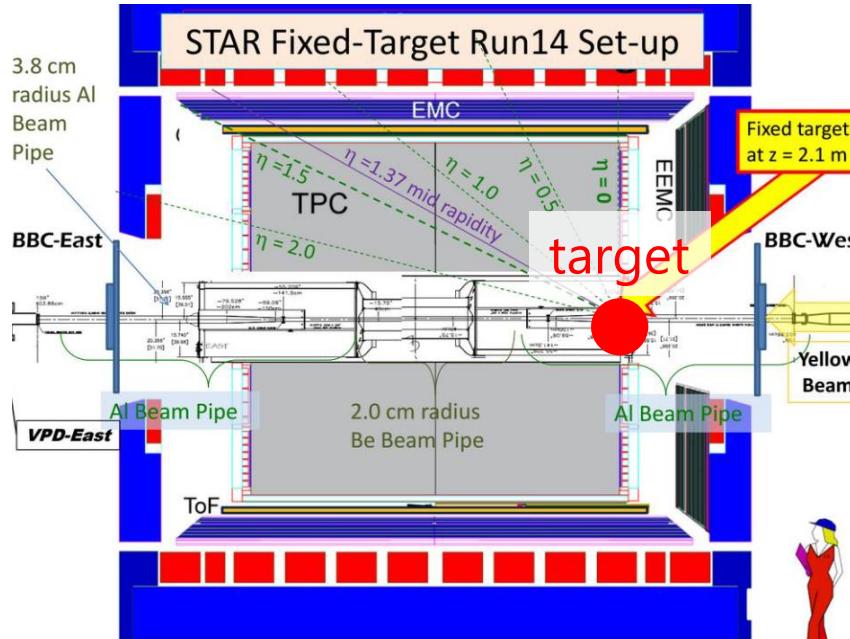

- Finite acceptance modifies the ratio strongly.
- Wider acceptance/efficiency is desirable.

Acceptance of Detectors

STAR Fixed Target

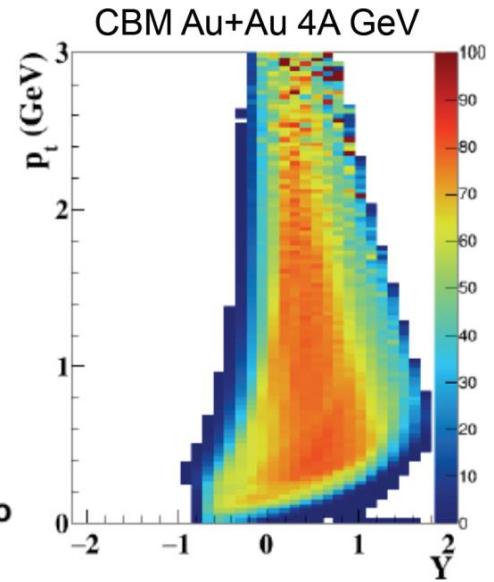

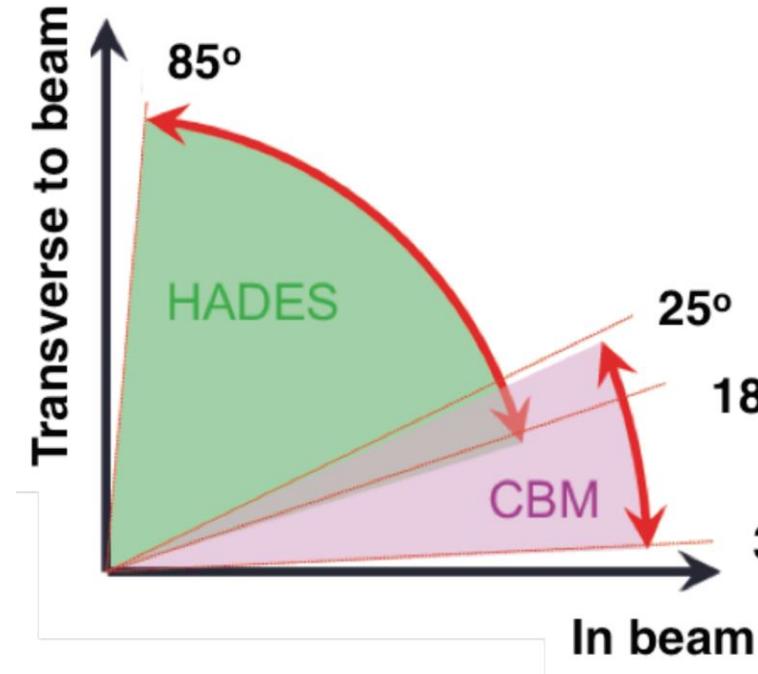

$$3 < \sqrt{s_{NN}} < 7.7 \text{ GeV}$$

from slide of D. Sebra

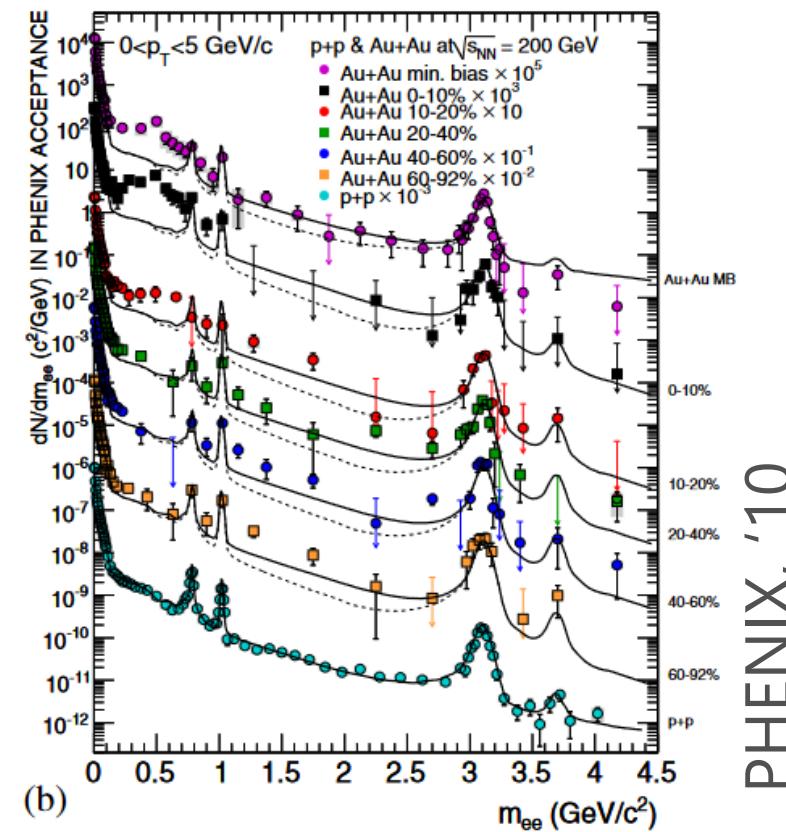

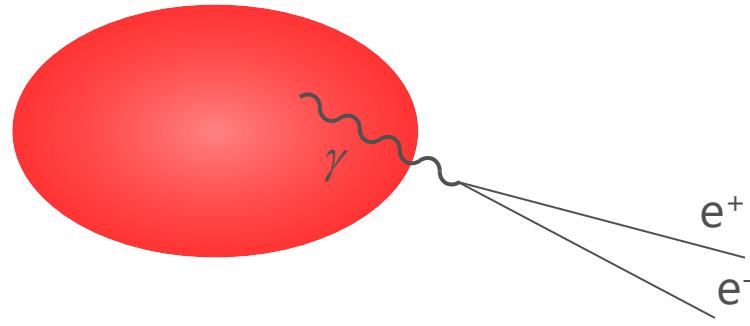

FAIR (GSI)

$$2 < \sqrt{s_{NN}} < 5 \text{ GeV}$$

Each detector has individual acceptance and efficiency.
➤ Checking detector-response correction is important.

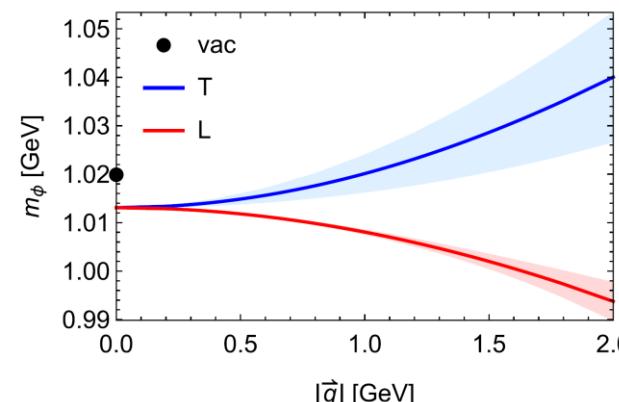

Dilepton Production Rate

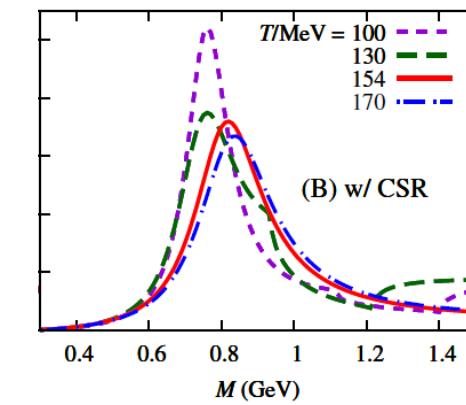

- Generated by the decay of virtual photons
- Carry information of primordial medium

Physics accessible with DPR

- Medium temperature
- Dispersion relations
- Chiral mixing by chiral restoration
- Signal of phase transitions

Kim, Gubler, 2020

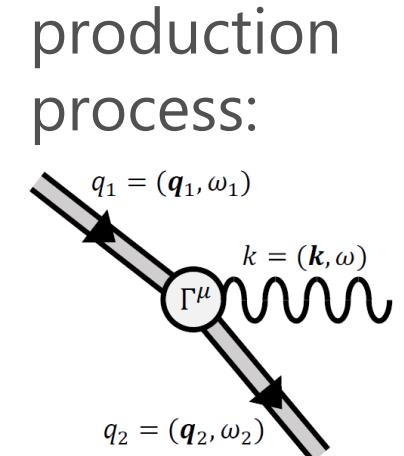

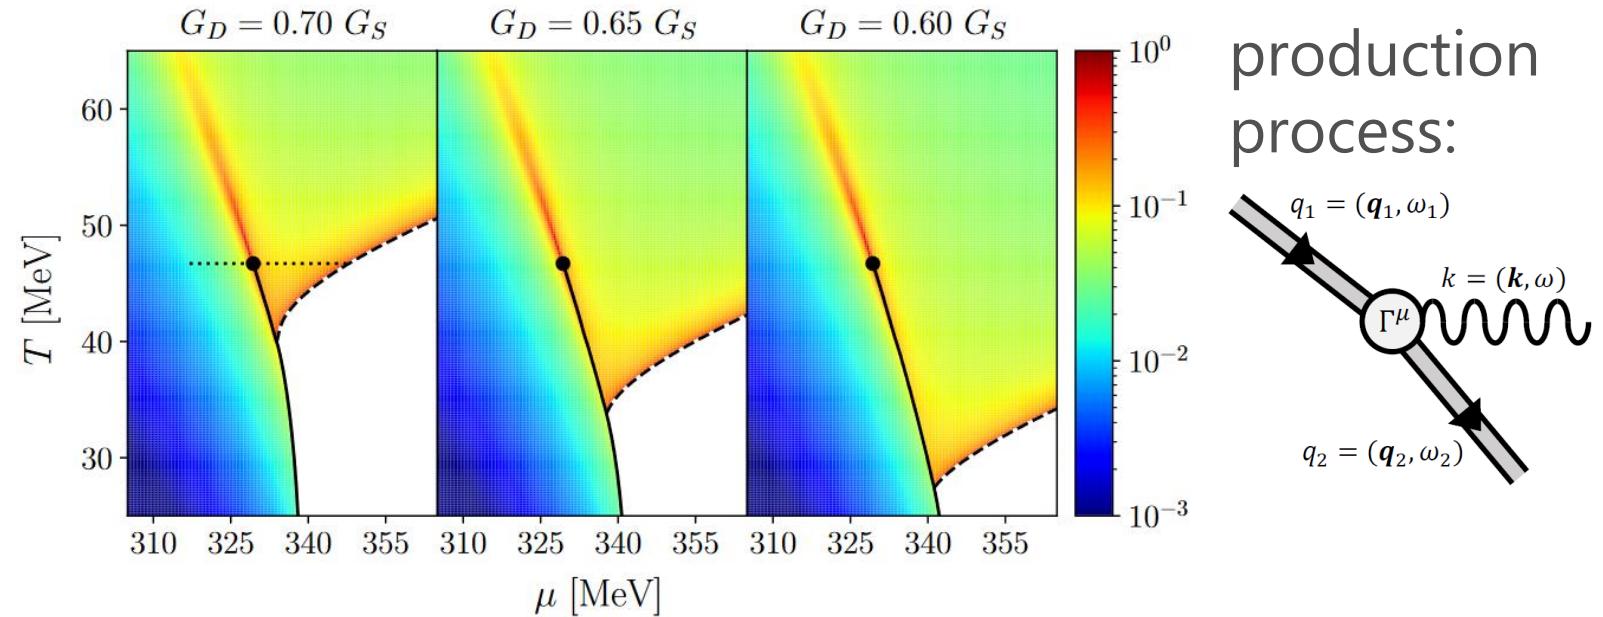

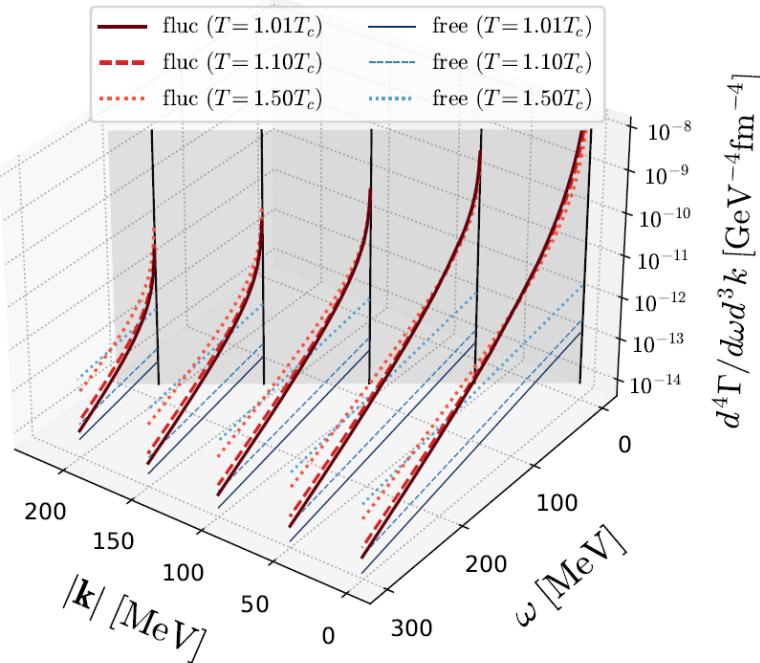

Sakai+, 2024

Dilepton at Ultra-Low-Mass Region

Signal for QCD-CP & Color SC

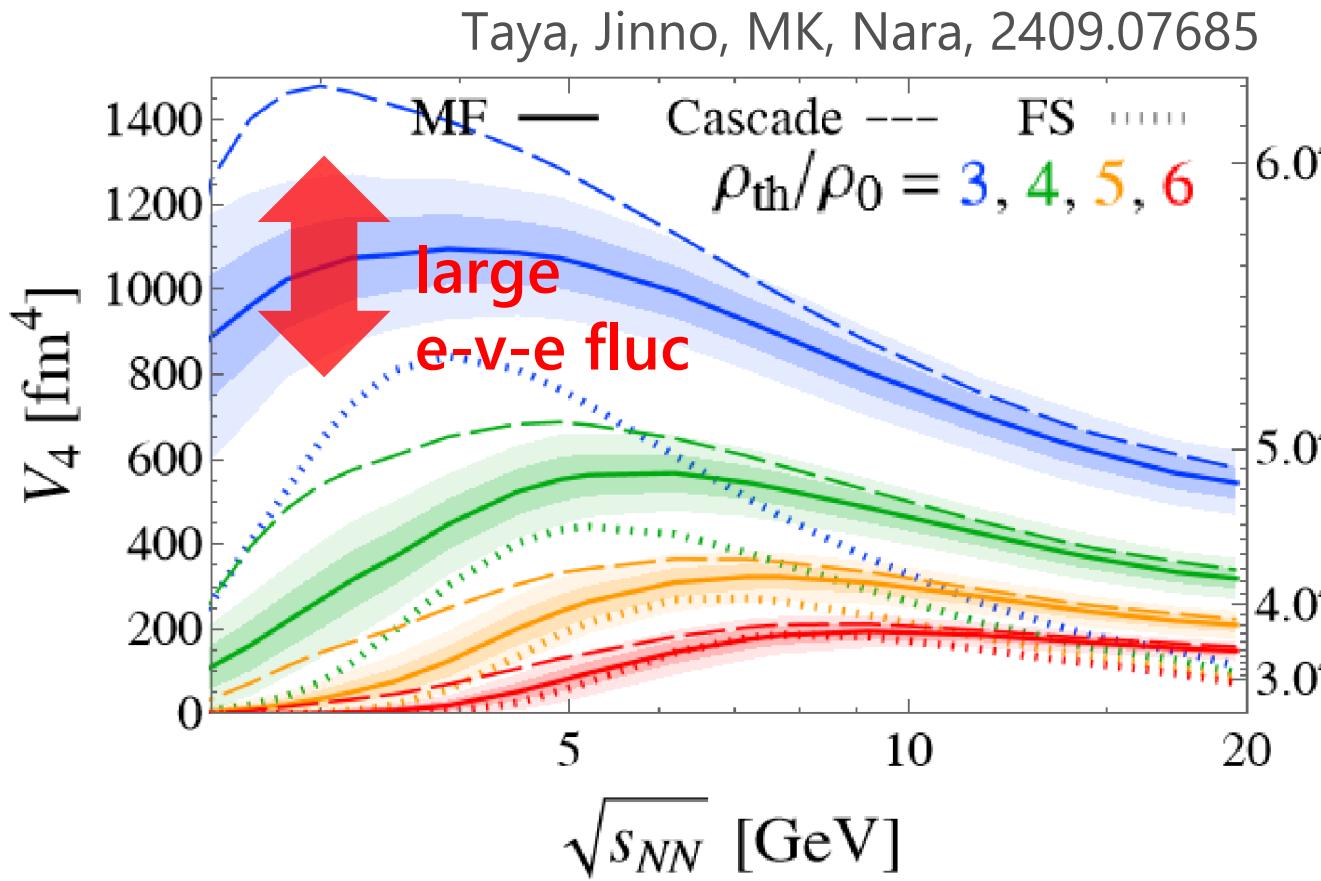

Nishimura, MK, Kunihiro, '22; '23; '24

Anomalous dilepton production due to soft modes at phase transitions

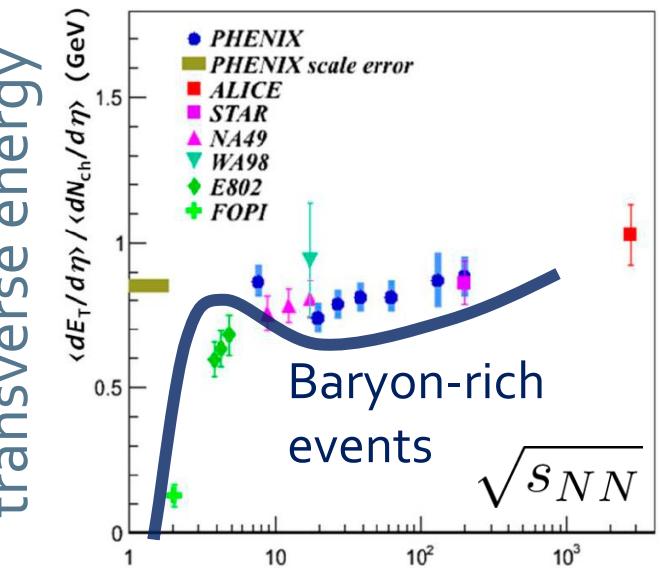

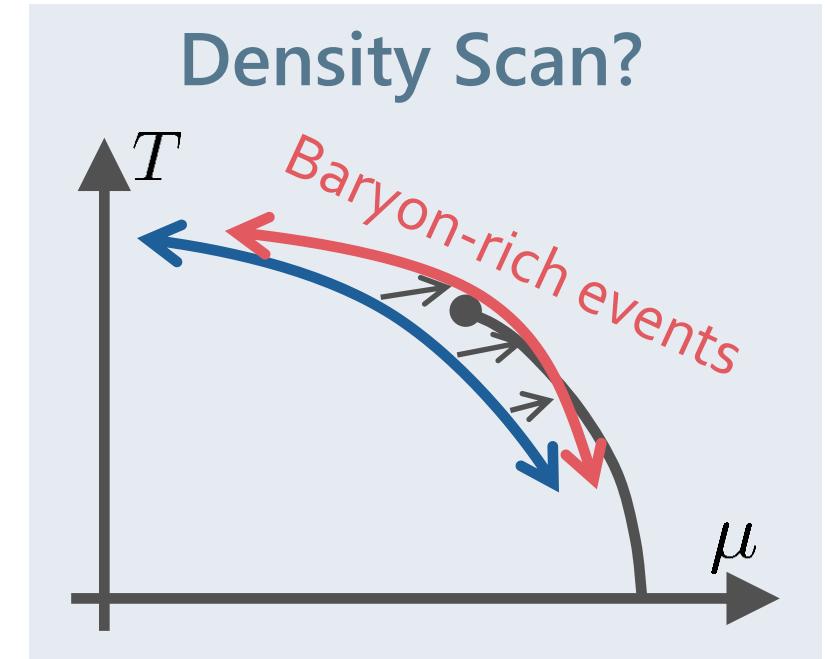

Two “hot spots” on the T - μ plane?

Event Selection

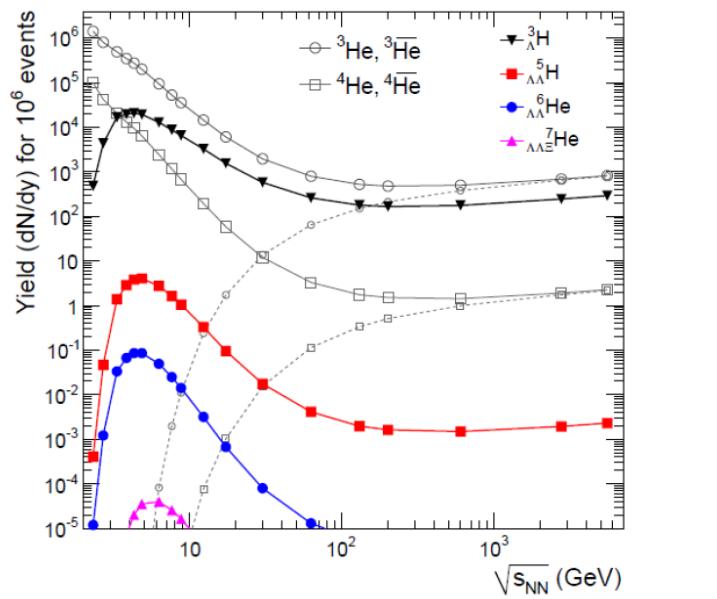

- Event selections via highest baryon/energy density will allow us a detailed study of QCD phase diagram.

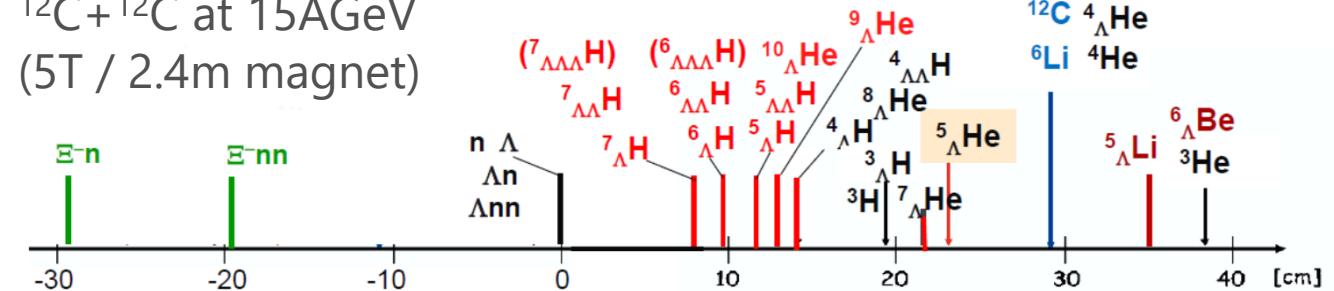

Hadron/Hypernuclear Physics

→ Hyodo (today) Mantovani Sarti (16th)

Hypernuclei

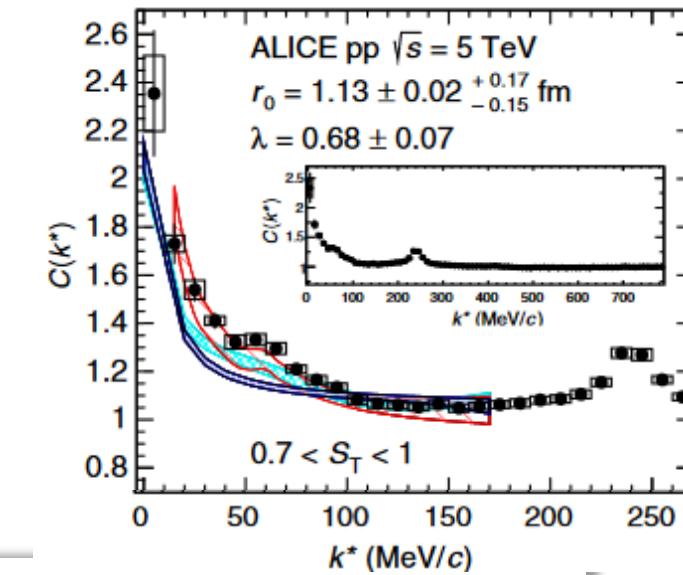

$^{12}\text{C} + ^{12}\text{C}$ at 15AGeV
(5T / 2.4m magnet)

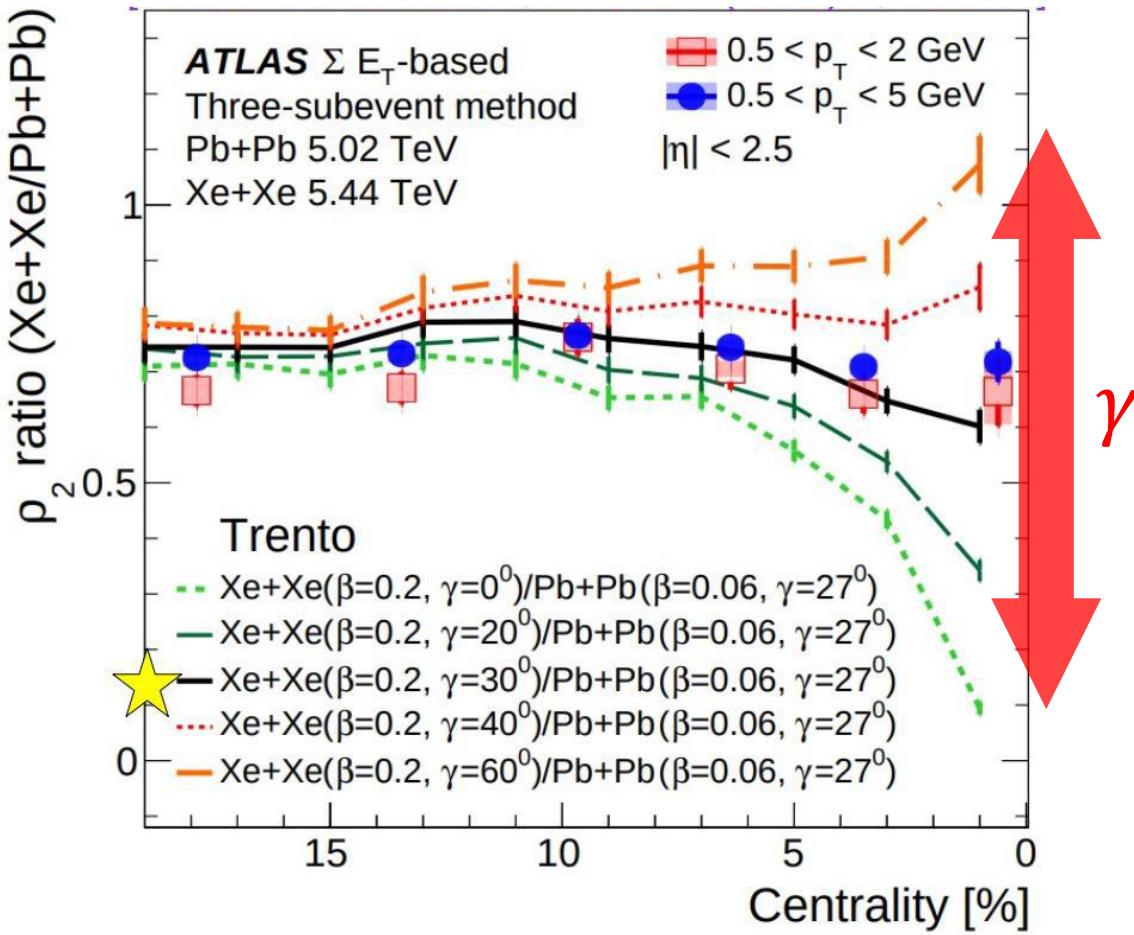

Correlation functions

→ hadron interaction

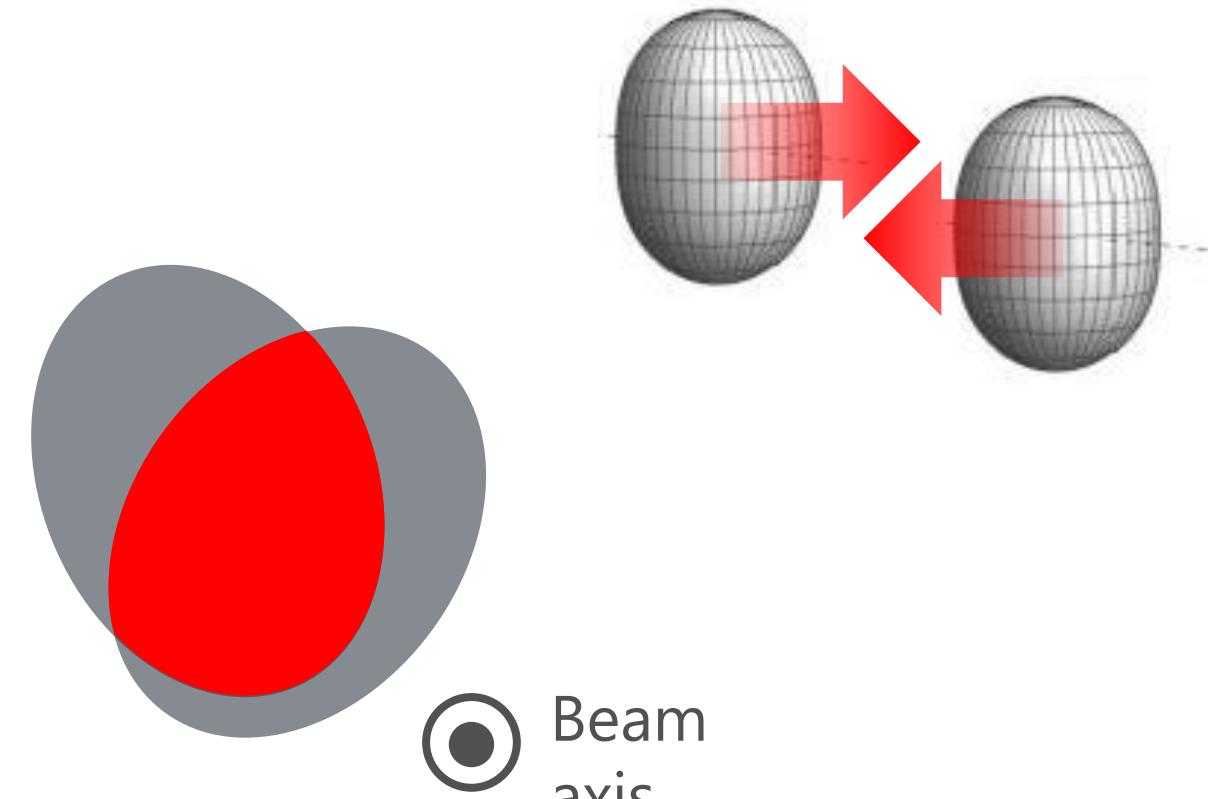

ALICE, 2020

Shape of Nuclei

ATLAS, PRC107 ('23)

Deformation parameter β, γ can be estimated from HIC using flow correlations.

J-PARC-HI
Future Plan

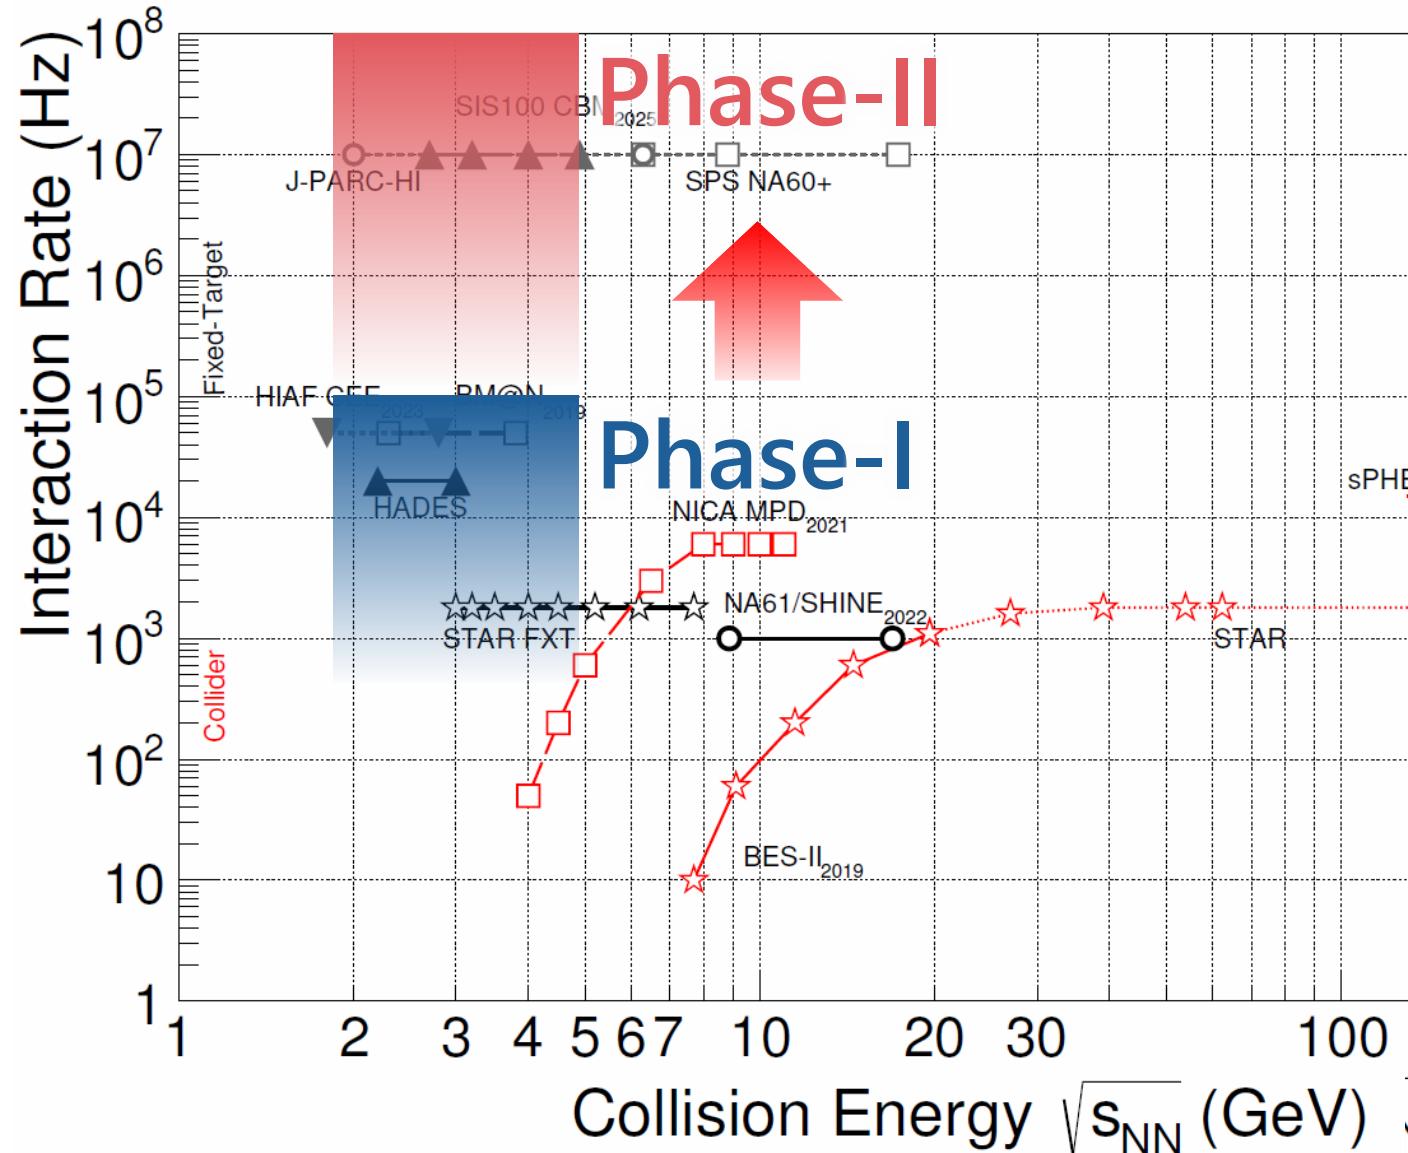

J-PARC-HI Staging Plan

Phase-I

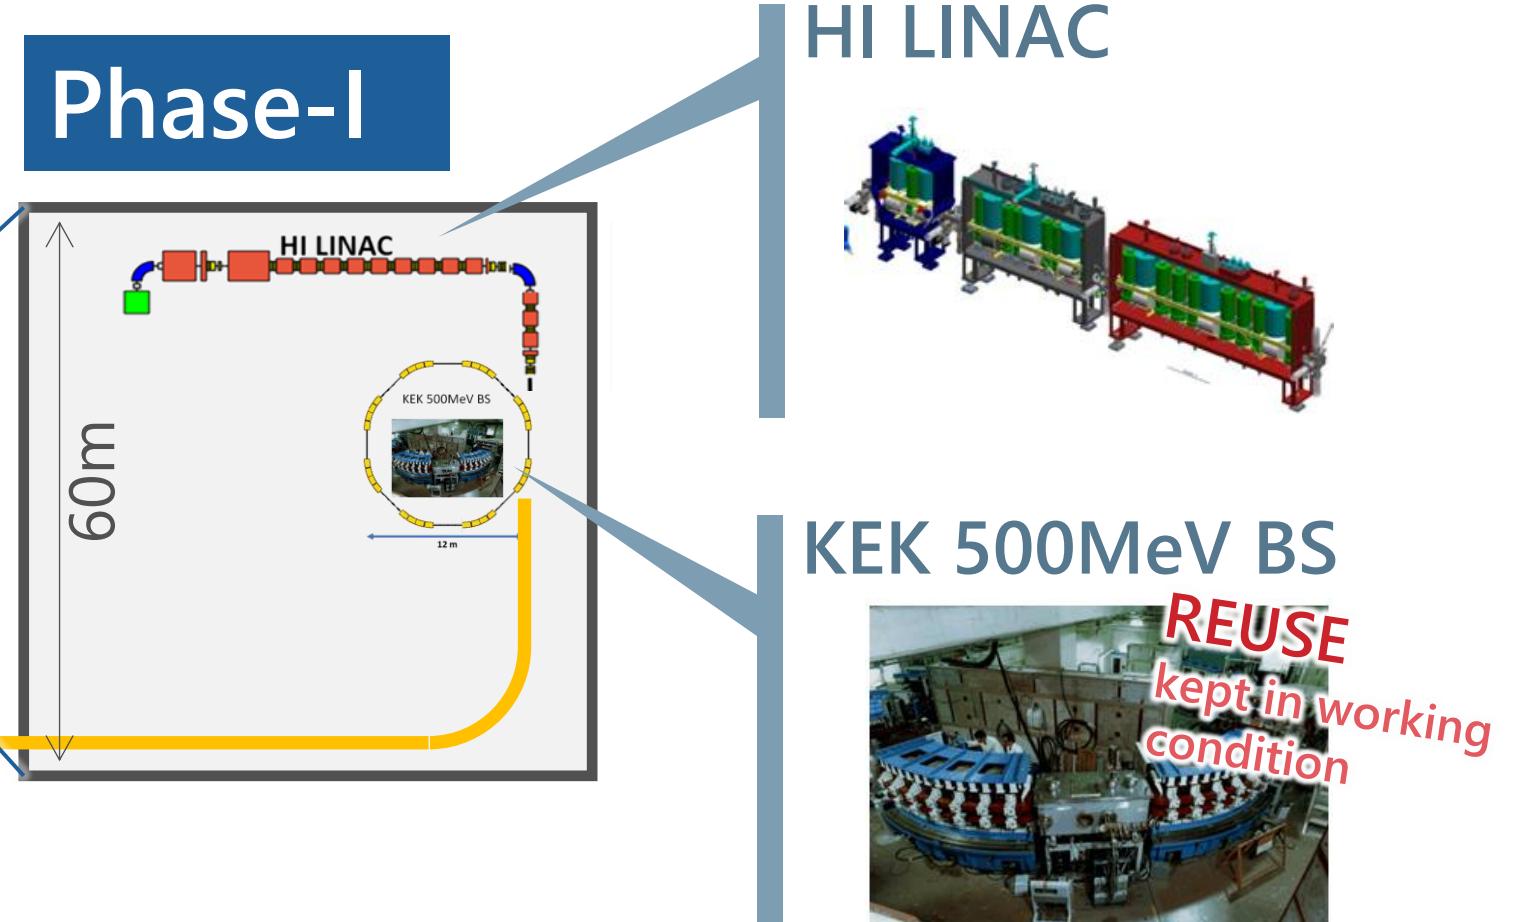

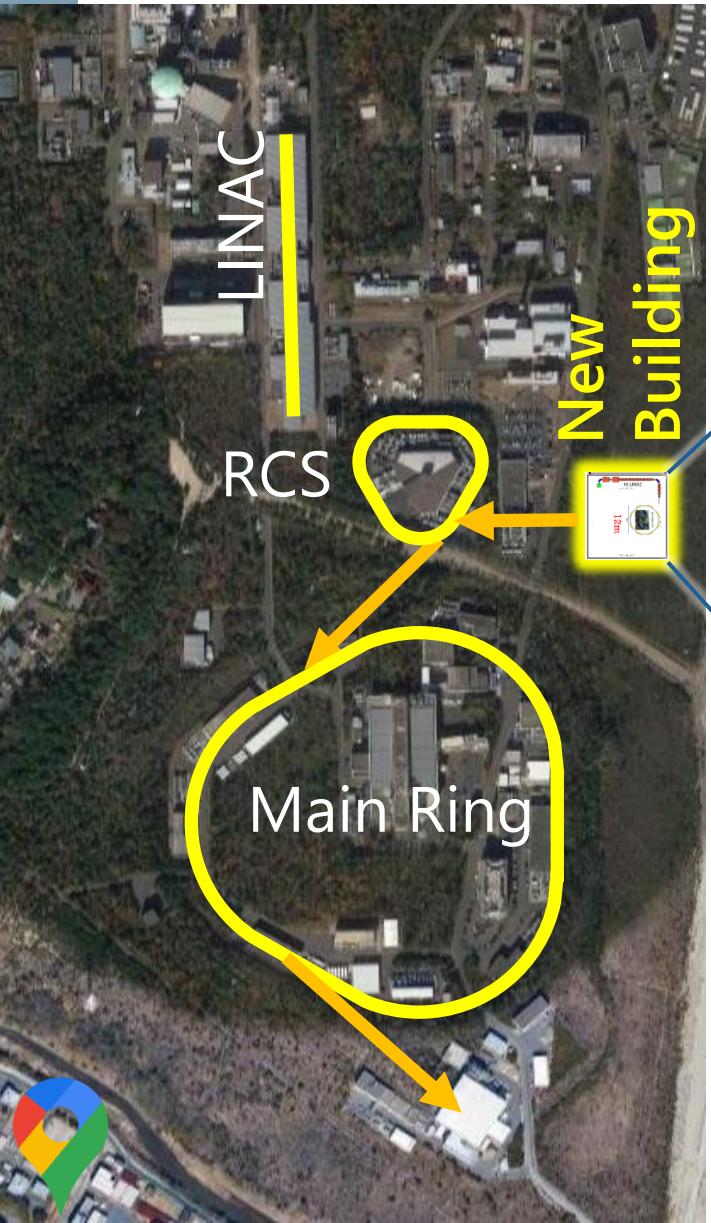

- KEK-BS booster
- E16+ α spectrometer

Phase-II

- NEW HI booster
- NEW spectrometer

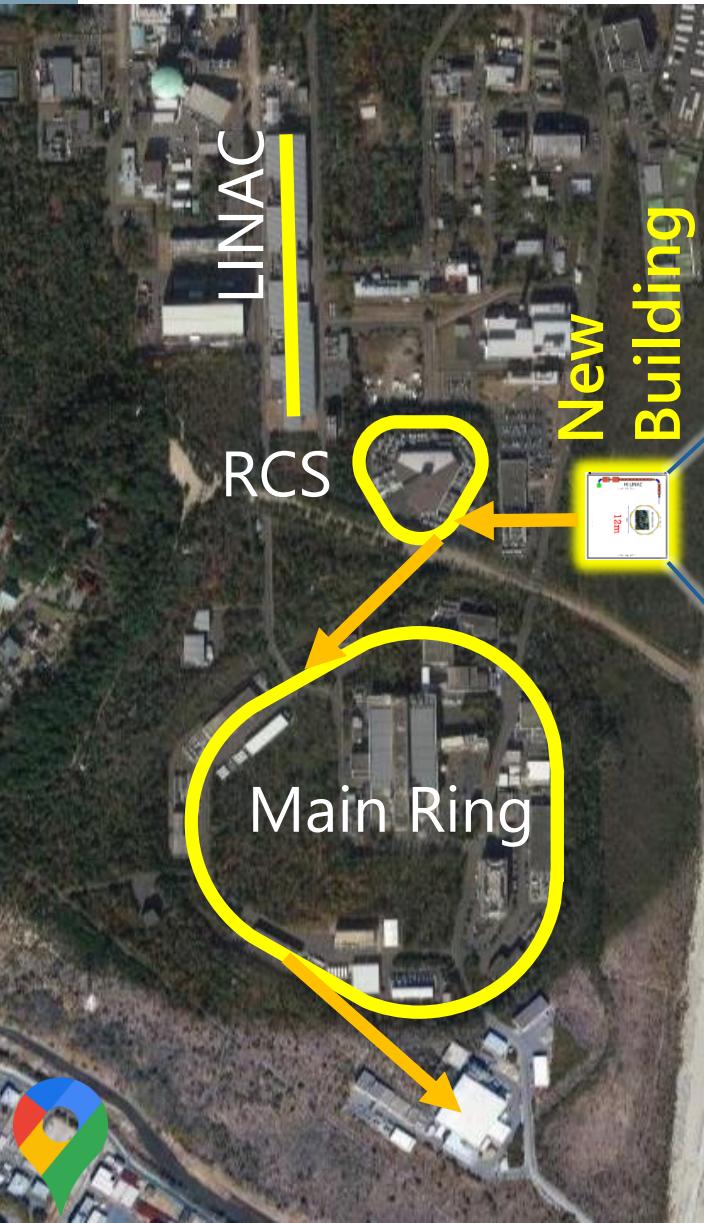

Staging of HI Booster

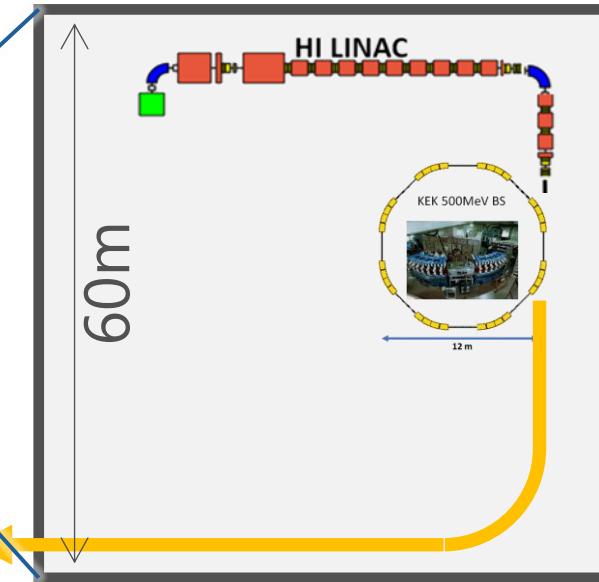

$\sim 10^5 \text{ Hz}$

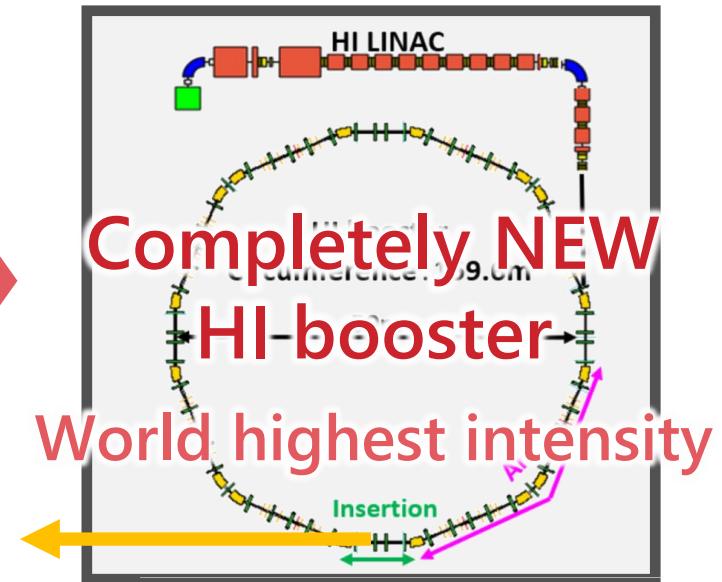

Staging of HI Booster

Phase-I

Phase-II

Interaction rate

$\sim 10^5 \text{ Hz}$

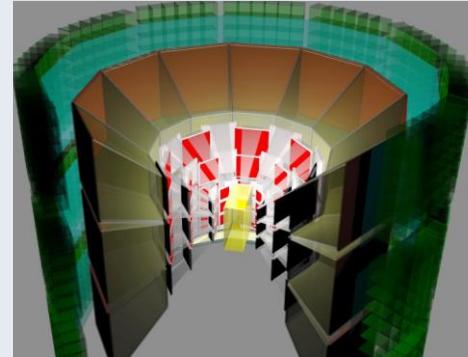

$\sim 10^8 \text{ Hz}$

Detector Phase-I

Morino (15th), Ozawa (Poster)

E16 Spectrometer

- $\phi \rightarrow e^+e^-$, $\phi \rightarrow K^+K^-$
- In-medium mass modification
- Commissioning 2020-2024

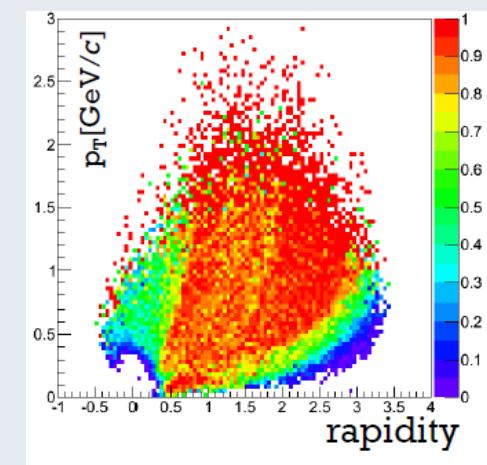

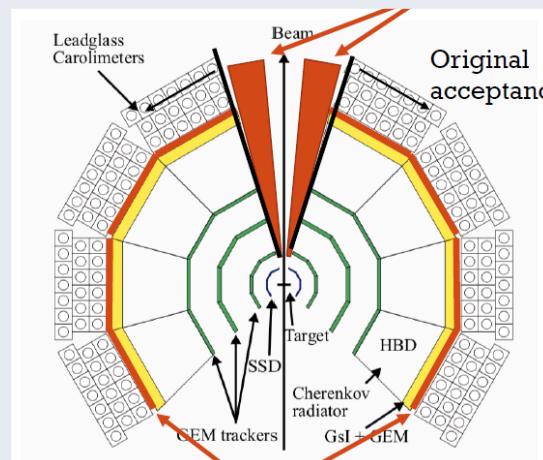

UPGRADE

E16+ α

Upgrade forward region for high-multiplicity counting

Hadron/lepton measurement at wide acceptance

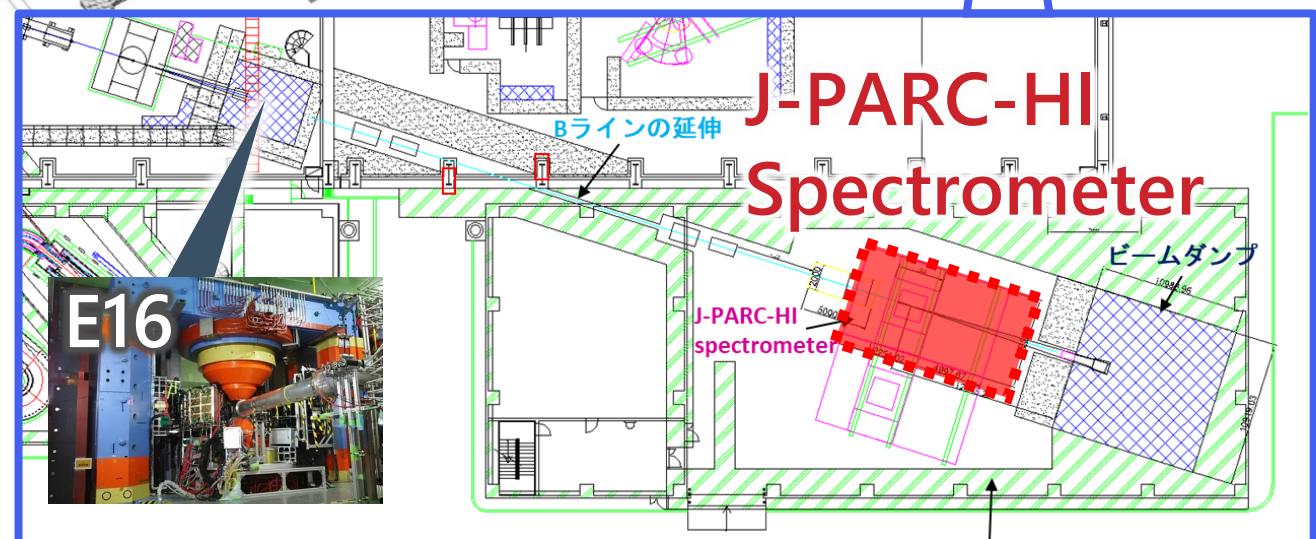

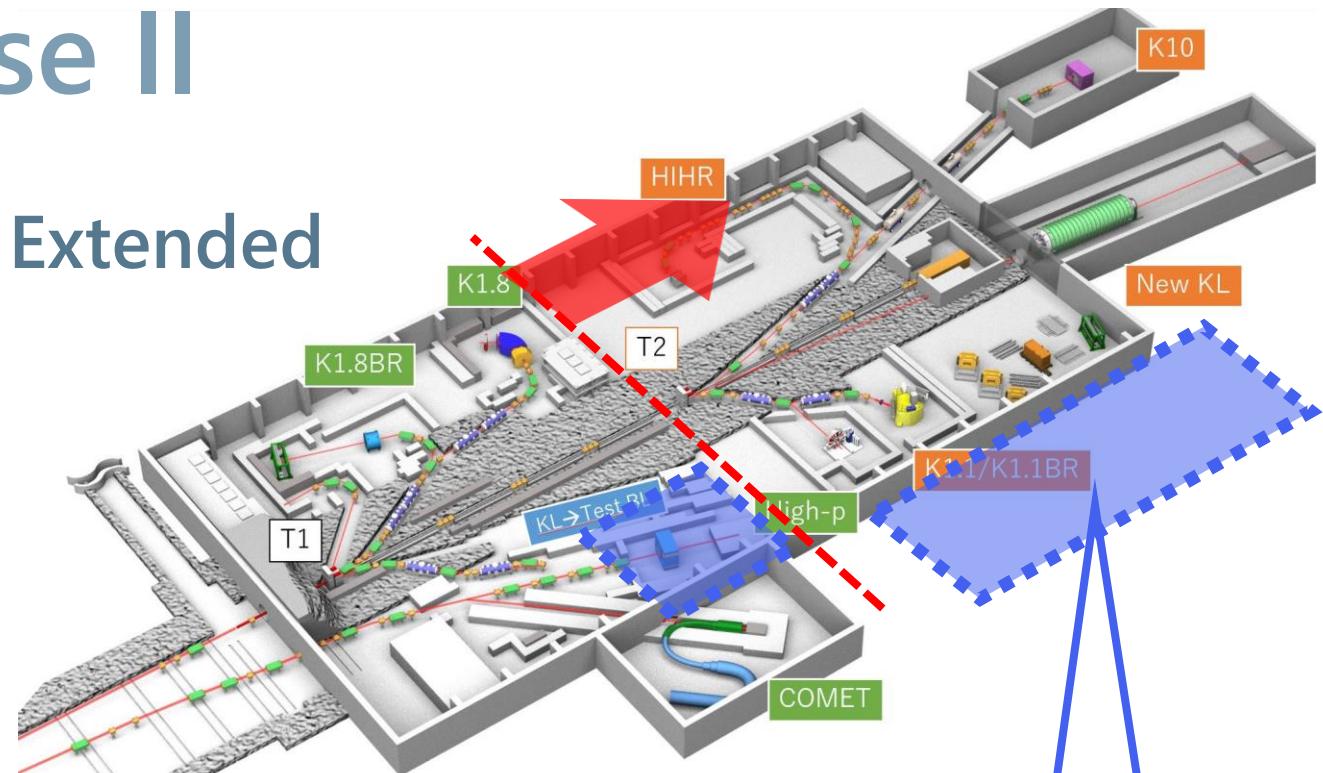

Detectors for Phase II

Present

Extended

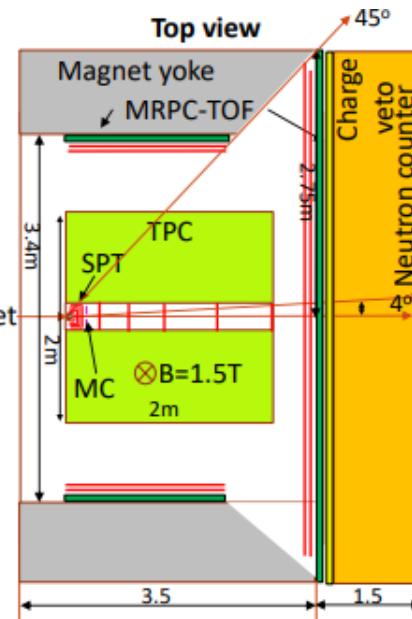

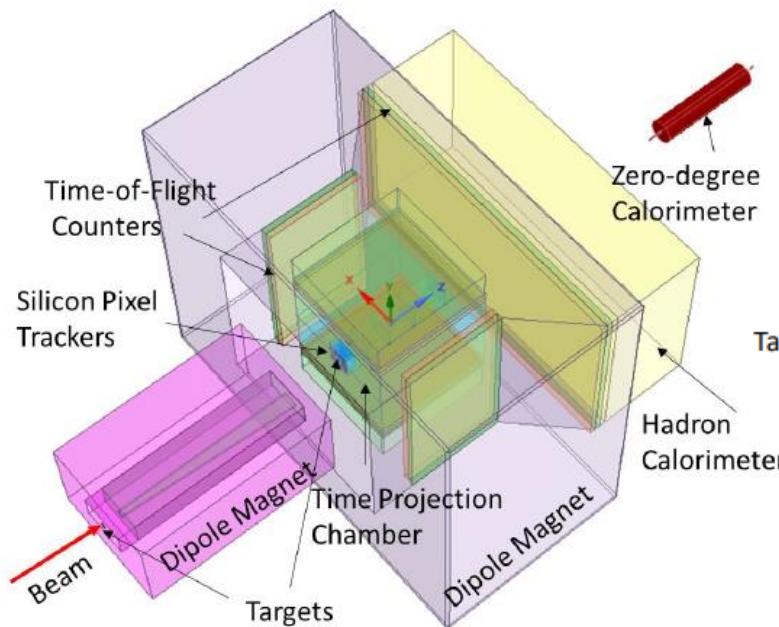

- J-PARC-HI spectrometer will be installed in an annex
- E16 will also be replaced

Hadron Spectrometer

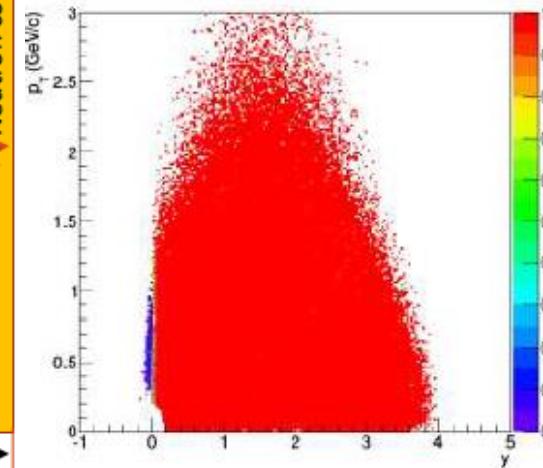

Phase-II

- 4π acceptance, high-intensity beam
 - Precise measurement of fluctuations, dileptons
- Detailed design are under discussion

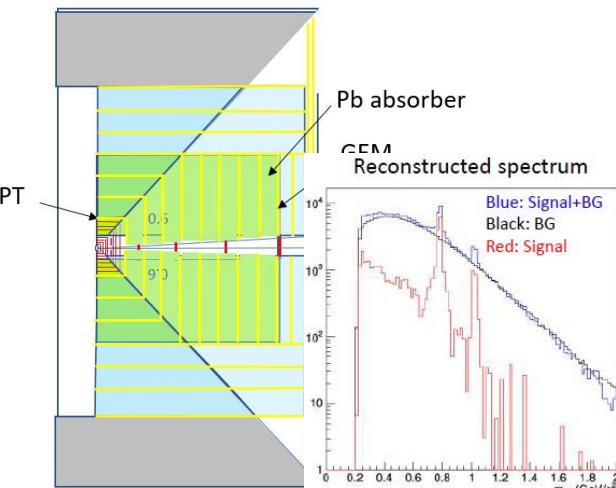

Hadron calorimeter

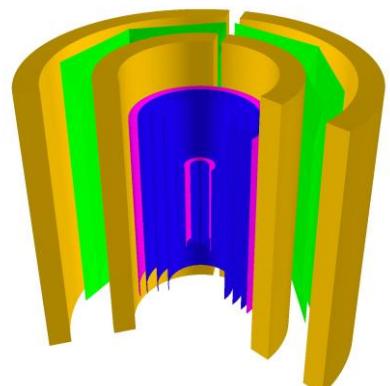

acceptance

Dimuon Setup

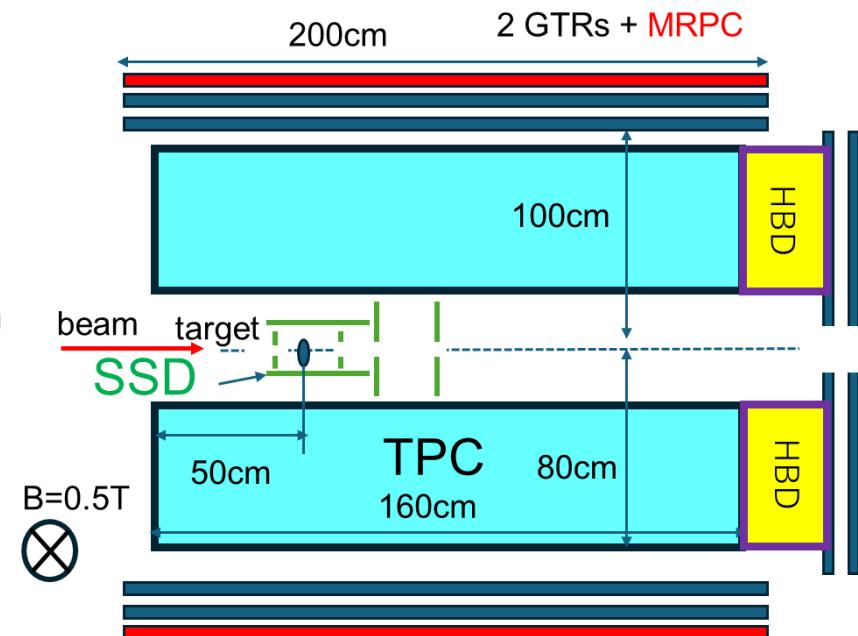

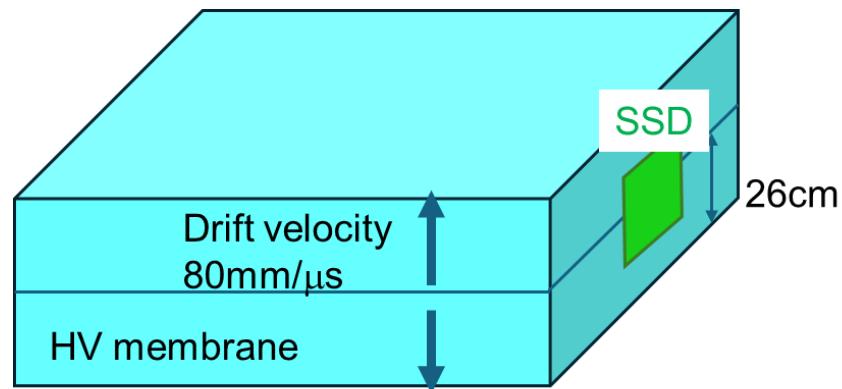

ALICE3-like dipole

Dilelectron Measurements

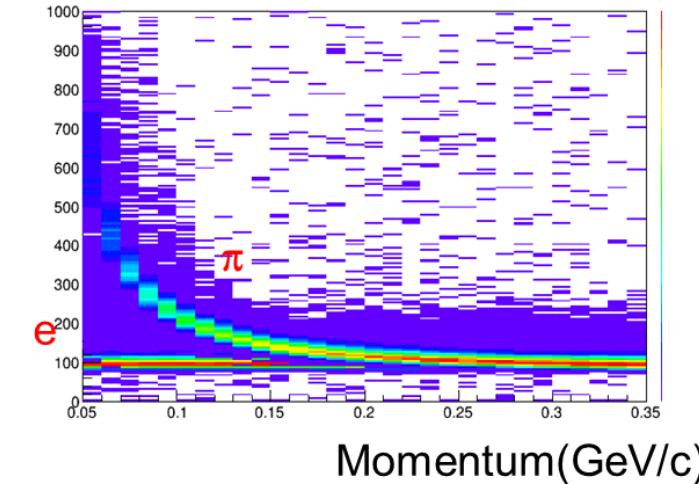

Phase-II

- Large acceptance measurement of dielectrons and hadrons

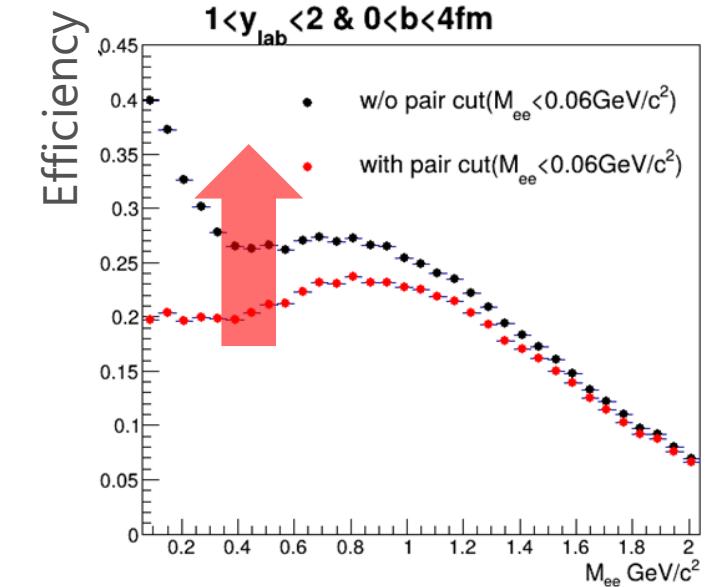

- ▶ Precise measurement of low-mass dielectrons
- ▶ search for QCD-CP & CSC phase transition

dE/dx of SSDs

Momentum(GeV/c)

Efficiency

$1 < y_{\text{lab}} < 2 \text{ & } 0 < b < 4\text{fm}$

• w/o pair cut($M_{ee} < 0.06\text{GeV}/c^2$)

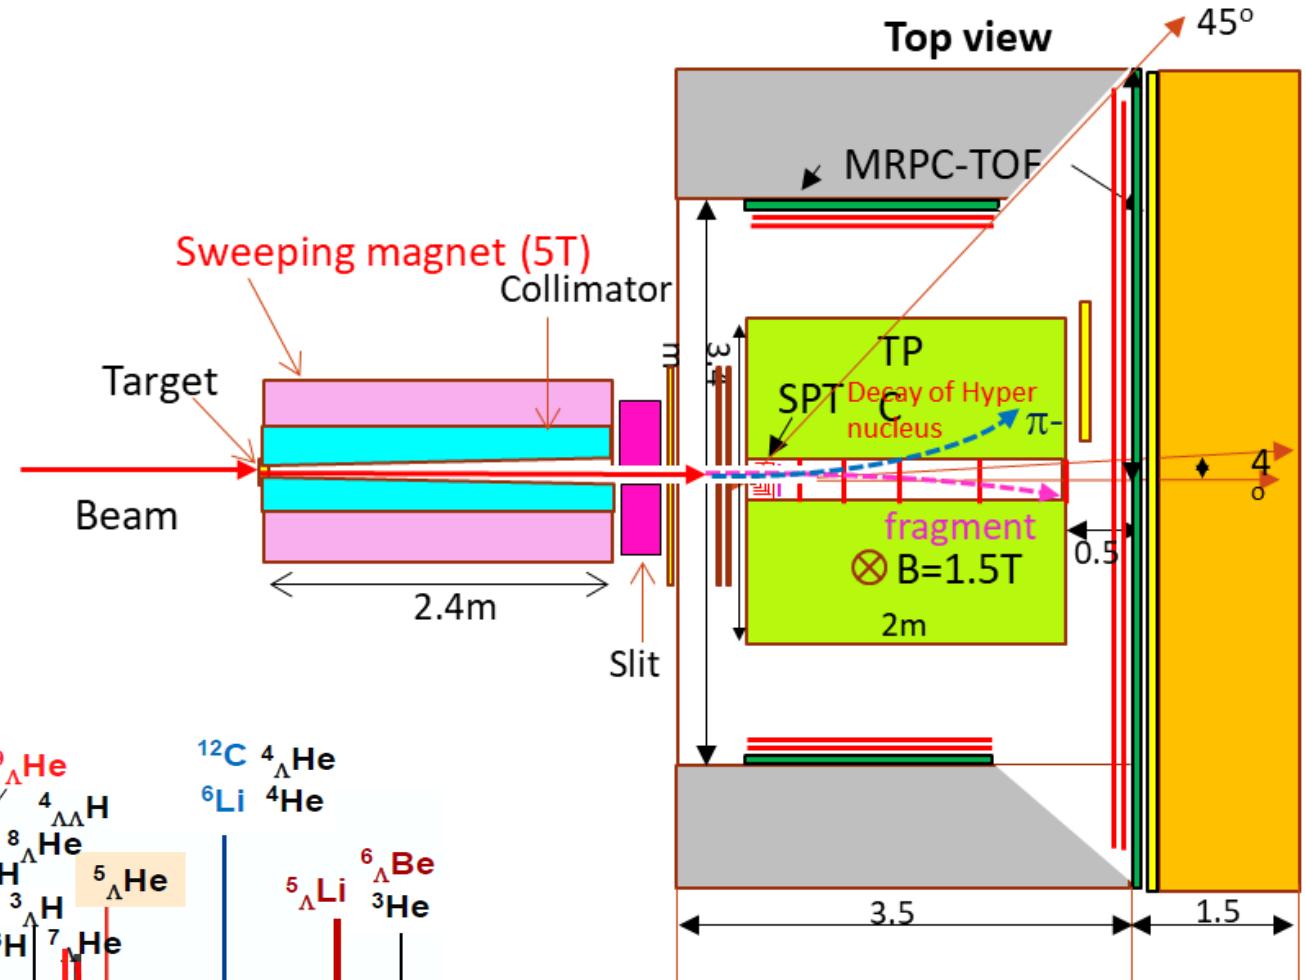

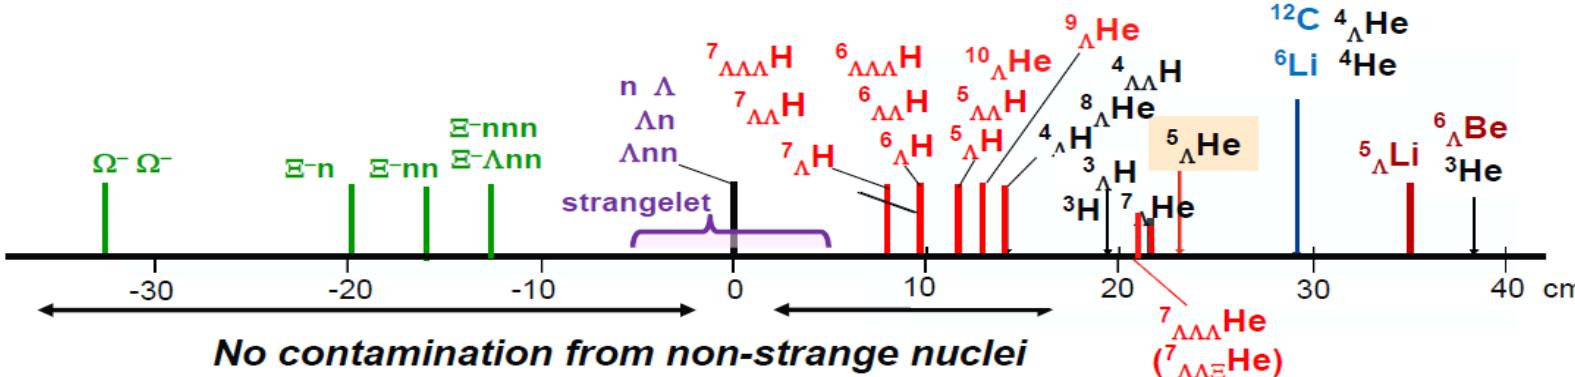

• with pair cut($M_{ee} < 0.06\text{GeV}/c^2$)

$M_{ee} \text{ GeV}/c^2$

Hypernuclear Spectrometer

Phase-II

- Closed geometry : Sweeping magnet and Collimator
- Interaction Rate : ~ 100 MHz
- Lifetime and Magnetic moment Search for new hypernuclei and strangelet

Imagine J-PARC 20 years from now!

New experiments with **heavy-ion beams**
will enrich the future of J-PARC.

Summary

J-PARC-HI will

- realize high-precision HI experiments to explore
 - extremely dense QCD
 - hadron/hypernuclear physics, etc.
- be realized through the staging plan:
 - Phase-I: Experiment utilizing existing equipment
 - Phase-II: Full-spec experiment with world highest rate

Still many things to do

- We need continuous support from community.
- New challengers are welcome!

Accelerators

- LINAC
- RCS
- Main Ring(MR)
- High intensity $I = 1\text{MW}$

Purposes

- Hadron/Nuclear physics
- Neutrino physics
- Material/Life science

J-PARC-HI = J-PARC Heavy-Ion Project

- New HI injector + existing synchrotrons (RCS, MR)
- Supply heavy-ion beams with world highest luminosity
- Realize various new experiments at J-PARC
