

Extended supersymmetric quantum mechanics from symmetries in higher dimensional Dirac action

Inori Ueba (Kobe University)

arXiv:1905.11673

① Introduction and Conclusion

- ◆ Quantum mechanical supersymmetry (QM SUSY) has a wide range of applicable topics

exactly solvable quantum mechanics, AdS/CFT, Black hole, SYK model, extra dimension, ...

- ◆ KK decomposition of higher dimensional Dirac field

Degeneracy between 4D left and right – handed spinors

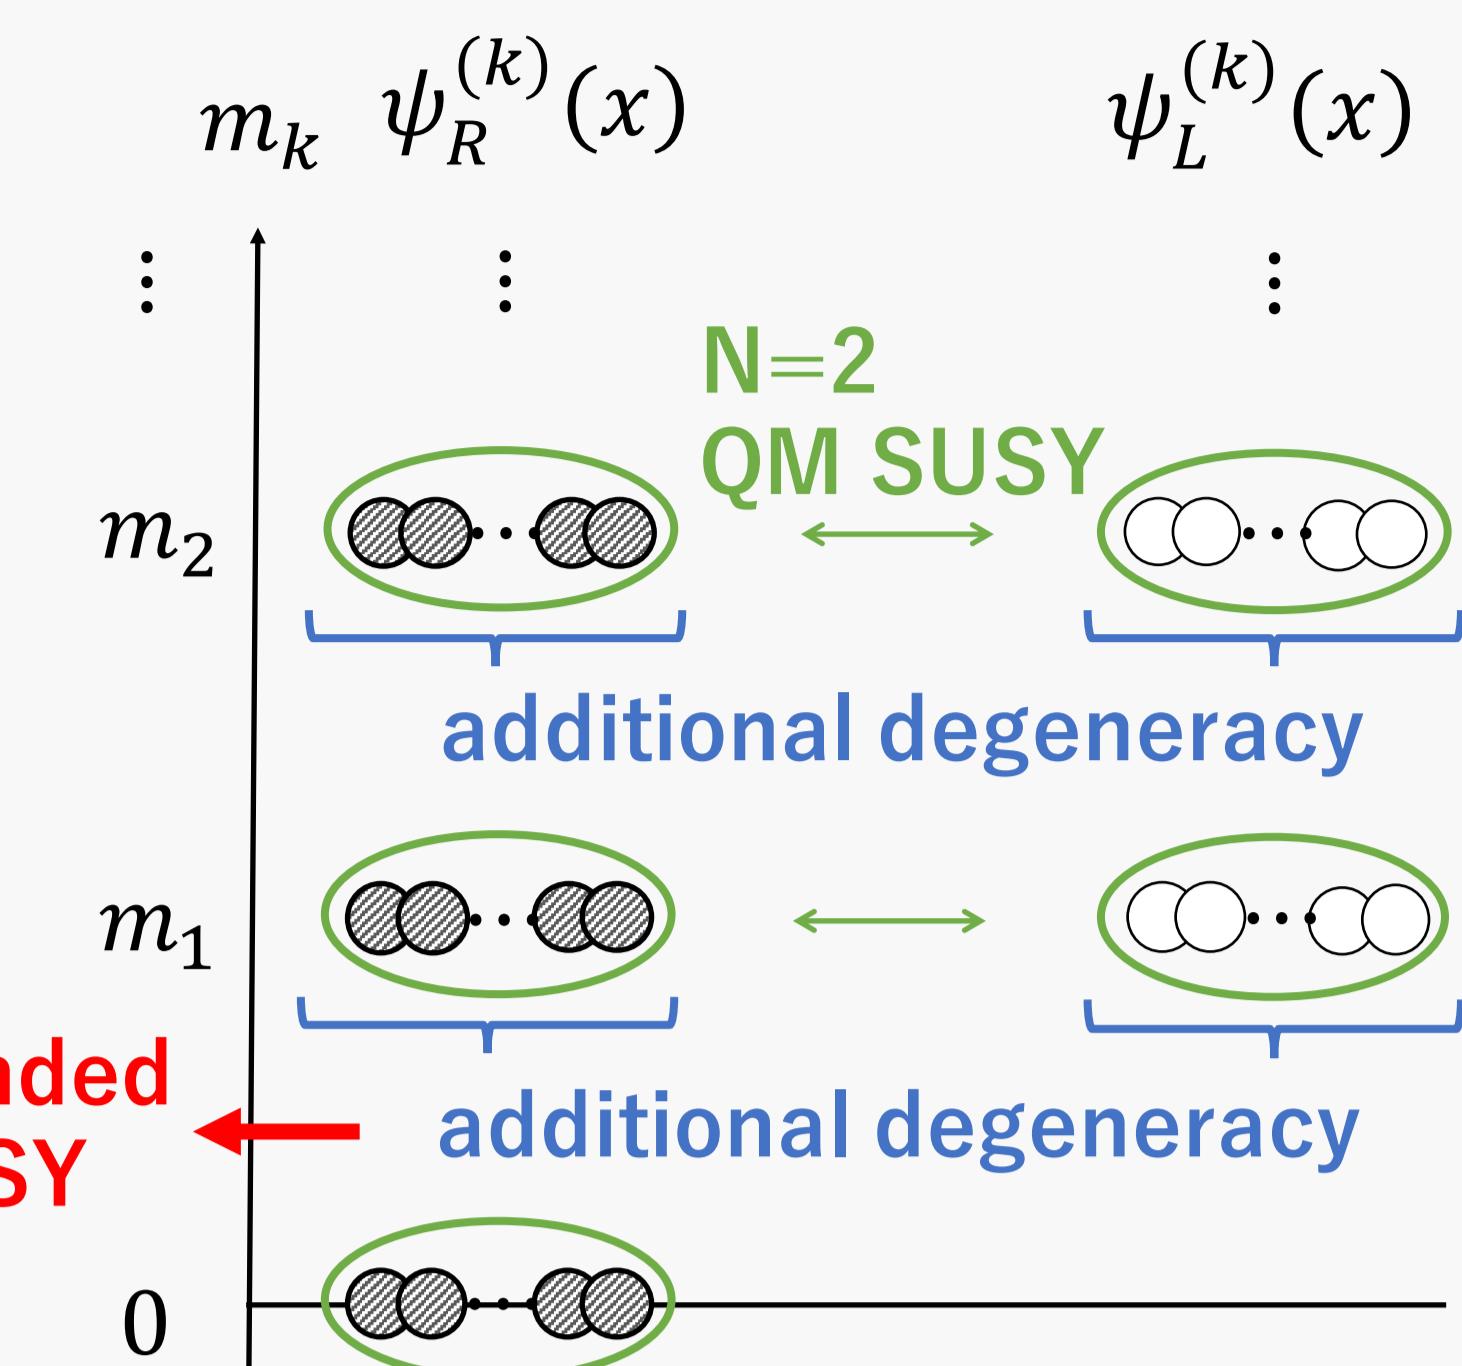

(spinor, gauge, gravity fields)

N=2 QM SUSY

- ◆ Problem : There is additional degeneracy due to the degrees of freedom of higher dimensional spinor. What further structures are hidden in this degeneracy ?

◆ Conclusion

- N-extended QM SUSY with central charges from symmetries in extra dimensions is hidden in the 4D mass spectrum
- KK mode functions correspond to BPS states

② KK decomposition of Dirac field and N=2 QM SUSY

- ◆ 4 + d dimensional Dirac action with a curved extra dimension Ω

$$S = \int_{M_4} d^4x \int_{\Omega} d^d y \sqrt{-g} \times \bar{\Psi}(x, y) [i\Gamma^\mu \partial_\mu + i\Gamma^y (\nabla_y + iA_y(y)) - W(y)] \Psi(x, y)$$

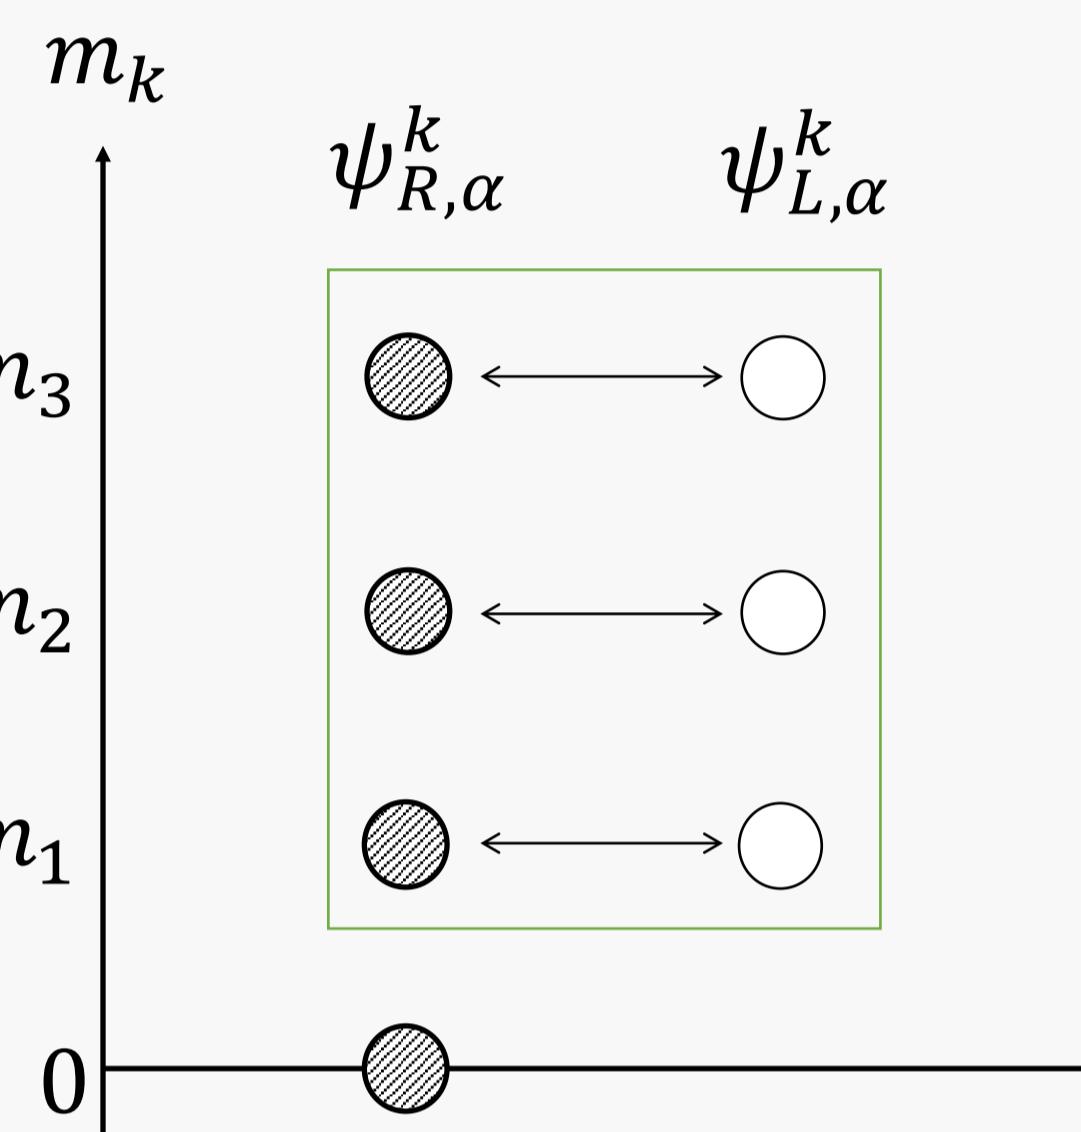

$\Psi(x, y)$ has $2^{\lfloor d/2 \rfloor} \times 4$ components

$\Psi(x, y) = \sum_{k,\alpha} [f_\alpha^{(k)}(y) \otimes \psi_{R,\alpha}^k(x) + g_\alpha^{(k)}(y) \otimes \psi_{L,\alpha}^k(x)]$

$2^{\lfloor d/2 \rfloor}$ components KK mode function 4D chiral spinor

k : KK mode number
 $\alpha = 1, 2, \dots$: label of additional degeneracy

- ◆ 4D mass terms consist of the pair of left and right fields

- ◆ $f_\alpha^{(k)}(y)$ and $g_\alpha^{(k)}(y)$ should be related with each other

N=2 QM SUSY

$$Q f_\alpha^{(k)}(y) = m_k g_\alpha^{(k)}(y)$$

$$Q g_\alpha^{(k)}(y) = m_k f_\alpha^{(k)}(y)$$

supercharge
 $\sim i\Gamma^y (\nabla_y + iA_y(y)) - W(y)$
 "bosonic" and "fermionic" states in QM SUSY

N=2 SUSY algebra

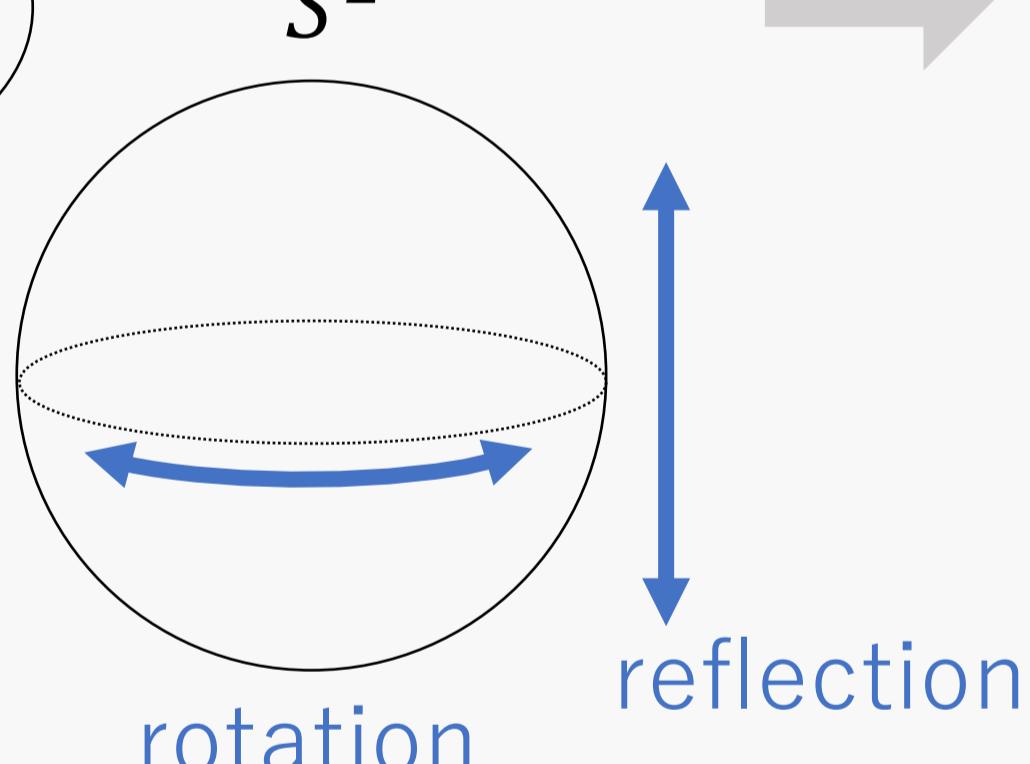

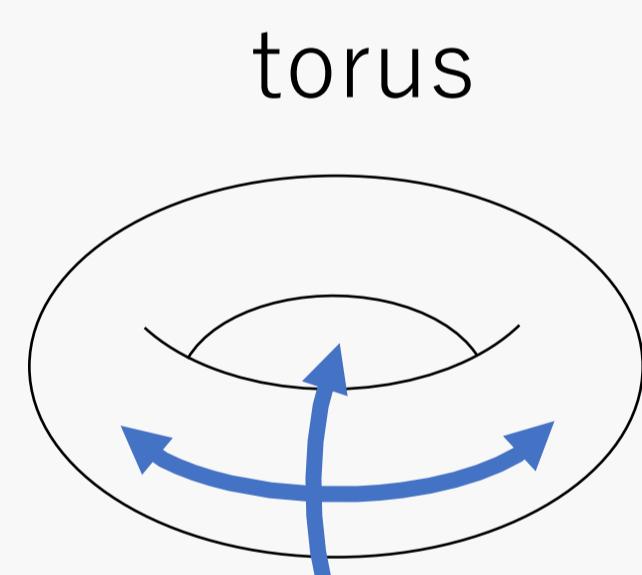

$$\{Q_i, Q_j\} = 2H\delta_{ij}, \quad [Q_i, H] = 0, \quad Q_1 = Q, \quad Q_2 = i(-1)^F Q$$

$(-1)^F$: counterpart of 4D chirality (+1 for $f_\alpha^{(k)}(y)$ and -1 for $g_\alpha^{(k)}(y)$)

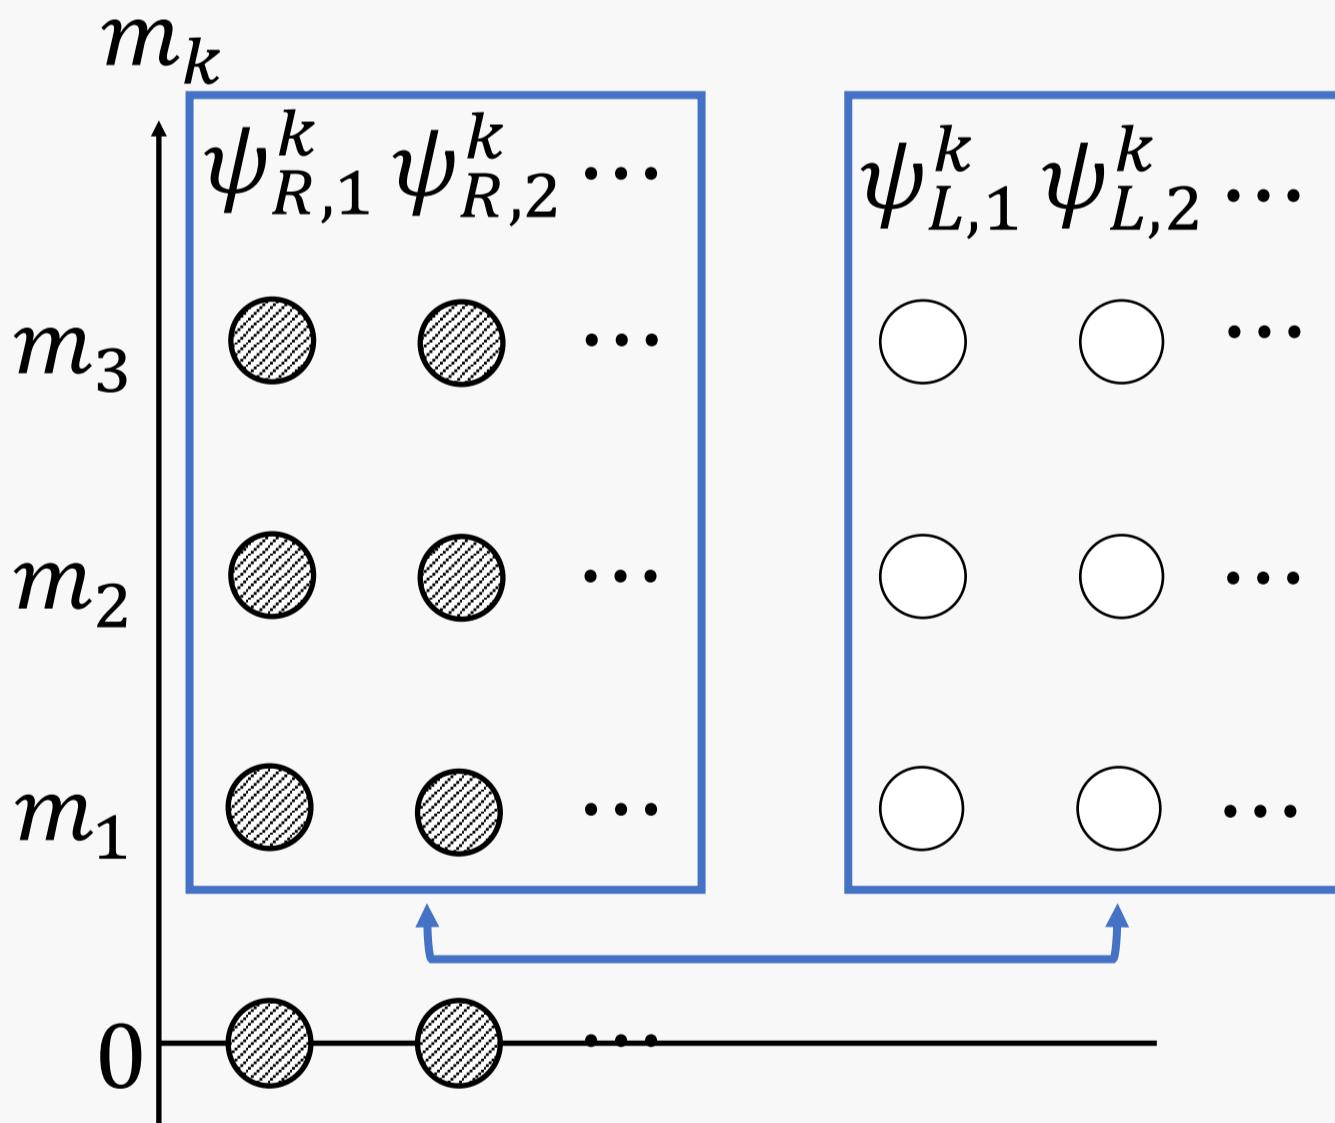

③ Extended QM SUSY from symmetries

- ◆ Symmetries of extra dimensions

example:

- ◆ Additional degeneracy of 4D spinors

N-extended QM SUSY

$$Q_i^{(A)} \quad (i = 1, 2, \dots, N_A) \quad \leftrightarrow \quad f_\alpha^{(k)}(y) \quad \leftrightarrow \quad g_\beta^{(k)}(y)$$

- $Q_i^{(a)} \sim (-1)^F \times \hat{a}_i \times Q$
- $Q_i^{(b)} \sim (-1)^F \times \hat{b}_i \times Q$
- $Q_i^{(\alpha)} \sim \hat{a}_i \times Q$
- $Q_i^{(\beta)} \sim \hat{b}_i \times Q$

$\hat{a}_i, \dots, \hat{a}_i, \dots$ are operators related to symmetries and satisfy

$$(\hat{a}_1, \hat{a}_2, \dots, \hat{a}_{N_A}) \quad (\hat{b}_1, \hat{b}_2, \dots, \hat{b}_{N_B}) \quad \dots$$

$$H \quad \text{commute} \quad (\hat{a}_1, \hat{a}_2, \dots, \hat{a}_{N_A}) \quad (\hat{b}_1, \hat{b}_2, \dots, \hat{b}_{N_B}) \quad \dots$$

$$(\hat{a}_1, \hat{a}_2, \dots, \hat{a}_{N_A}) \quad (\hat{b}_1, \hat{b}_2, \dots, \hat{b}_{N_B}) \quad \dots$$

$$(\hat{a}_1, \hat{a}_2, \dots, \hat{a}_{N_A}) \quad (\hat{b}_1, \hat{b}_2, \dots, \hat{b}_{N_B}) \quad \dots$$

④ SUSY algebra with central charges

- ◆ N-extended SUSY algebra with central charges

$$\{Q_i^{(A)}, Q_j^{(B)}\} = 2H\delta_{ij}\delta^{AB} + 2Z_{ij}^{(A)}\delta^{AB}$$

$$[Z_{ij}^{(A)}, Q_k^{(B)}] = [Z_i^{(A)}, H] = [Z_i^{(A)}, Z_j^{(B)}] = [Q_i^{(A)}, H] = 0$$

$(i, j, k = 1, 2, \dots, A, B = a, b, \dots, \alpha, \beta, \dots)$

Central charges : $Z_{ij}^{(a)} \sim (\hat{a}_i \hat{a}_j - \delta_{ij}) \times H, \dots, Z_{ij}^{(\alpha)} \sim (\hat{a}_i \hat{a}_j - \delta_{ij}) \times H, \dots$

◆ BPS states

diagonalize the eigenvalues of $Z_{ij}^{(A)}$ and redefine $Q_i^{(A)} \rightarrow Q'_i^{(A)}$

$$\{Q'_i^{(A)}, Q'_j^{(B)}\} = 2(m_k + z_i^{(A)})\delta_{ij}\delta^{AB} \quad \text{for eigenstates}$$

$Q'_i^{(A)} = 0$ for mode functions with $z_i^{(A)} = -m_k$ (BPS states)

In this SUSY $[Q_i^{(A)}, Q_j^{(A)}] = 0 \Rightarrow Q'_i^{(A)} Q'_j^{(A)} = 0 \quad (i \neq j)$

$$Q'_1^{(A)}, \dots, Q'_{i_{N_A}}^{(A)} = 0$$

except for at most one supercharge

mode functions become BPS states if $N_A > 1$

⑤ Example

- ◆ Extra dimension : 2d torus with periodic BC

reflection symmetry

R_i : reflection operator $y_i \rightarrow -y_i$
 P : reflection operator $\vec{y} \rightarrow -\vec{y}$

$$\bullet Q_{\pm}^{(R_i)} \sim \frac{1 \pm R_i}{2} \times \sigma_i \times Q \quad (i = 1, 2) \quad \bullet Q_{\pm}^{(P_3)} \sim \frac{1 \pm P}{2} \times \sigma_3 \times Q \quad \bullet Q_{\pm}^{(P)} \sim \frac{1 \pm P}{2} \times Q$$

- ◆ example of mode function $e_1 = (1, 0)^\top, e_2 = (0, 1)^\top$

$$f_\alpha^{(k)}(y) \propto \cos\left(\frac{2\pi k_1}{L_1} y_1\right) \cos\left(\frac{2\pi k_2}{L_2} y_2\right) e_\alpha$$

$$z_{\pm}^{(A)} = \pm(\text{reflection}) \times H$$
