

Operator noncommutativity and irreversibility in quantum chaos

University of Tokyo (Ueda group) Ryusuke Hamazaki

- ❖ Irreversibility: traditional probe of chaos

$\hat{O} = \hat{B}^\dagger \hat{B}$ → We have $I_{AB}(t) = \langle \hat{A}(t)^\dagger \hat{B}^\dagger \hat{B} \hat{A}(t) \rangle$ for final state

- ❖ Noncommutativity: new probe of quantum chaos

$$C_{AB}(t) = -\langle |[\hat{A}(t), \hat{B}]|^2 \rangle$$

- ❖ Our results: for initially localized states,

$$C_{AB}(t) \simeq I_{AB}(t)$$

Noncommutativity and irreversibility
are almost equivalent!
