

Late time behavior of codimension-0 observables in JT gravity

Kazuyoshi Yano (Nagoya University)

ongoing work with Masamichi Miyaji, Shan-Ming Ruan, Shono Shibuya, and Wayne Weng

- Complexity is thought of holographic dual of bulk observables like wormhole volume, action in WdW patch etc...
- We are now studying the late time behavior of codimension-0 observables, candidates of holographic dual of complexity
- We will discuss current status of our study and future directions

If you are interested in our work, please come to my poster !
