

Remarks on unified Description
of Particles

Hideki Yukawa
Research Institute for Fundamental Physics,
Kyoto University, Kyoto, Japan

The well-known method of quantization of fields has been proved to be a very successful in describing elementary particles and interactions between them. However, such a ~~the~~ method ~~is~~ could be applied presupposes that ~~we~~ we already know or we have the reason to believe that such and such particles exist and ~~and~~ such and such interactions ~~are to be~~ exist are to be assume between them.
