

一般の議論 Dec, 9, 1955 (1)

西島氏素粒子の identification

kinematical mass, life charge, I-spin, charge conj. (neutral)

$$\frac{m}{\Gamma} > \Gamma$$

dynamical  
 2. spin, parity  
 $\pi \dots$

$\tau$   $P_5$

3. hyperfragment

$N + \bar{\theta} \quad \otimes \quad X?$

$\Lambda^0 + \text{nucleus}$

4. anti proton

$\pi \rightleftharpoons$

片山氏:

1) 複合模型

2) 模型

$\theta + \alpha$  vector Fermi int.

片山氏:

$\tau^+ \tau^- \quad V(\tau)$   
 $\pi \quad E$

2) lepton

weak interaction of universality

isg of universality

ii) type of universality

$\mu, e : f$

dissym:  $f, b.$

iii) new concept

double  $\beta$ -decay (Korovin?)

neutrino  $\theta$  (sachs)

片山氏:

Hei decay 理論  $\theta$  (sachs) の存在の可能性

(2)

石澤氏: Non-local の問題(汗流気)

小川氏: 弱相互作用の

horizon space への作用以外の作用

D. G. Kleitman

N, P の違、これと関係する問題ではないか?  
charge の問題

lepton

neutrino

unwanted processes

その他の問題のメモ

1. 弱相互作用 — 混合角問題

式の問題 → 4/12

小川氏: weak interaction

石澤氏: Weinberg

石澤氏: New T-D の問題

与えられた:  $\lambda \ll G$  (終状態) - (初状態)  $\geq 0$  (3)

I. 現象論的考察

i) Branching ratio (式) 11)  $\lambda \ll G$   
 Modes of decays of hyperon and  $\theta^0$  mesons  
 Gyo Takeda, (Kawaguchi, Nishijima)

$$\Lambda^0 \rightarrow p + \pi^-$$

$$\rightarrow n + \pi^0$$

$$\Sigma^+ \rightarrow p + \pi^0$$

$$\rightarrow n + \pi^+$$

$$\theta^0 \rightarrow \pi^+ + \pi^-$$

$$\rightarrow \pi^0 + \pi^0$$

final state interaction  $\rightarrow$  charge independence  
 (Goldhaber model (N. O)  
 G. N. model

$$S S^\dagger = 1 \rightarrow S R^\dagger = -R$$

$$(N\pi | S | N\pi)(N\pi | R^\dagger | \Sigma) = -(N\pi | R | \Sigma)$$

$$|R_1|^2 / |R_2|^2 = \frac{2 + \alpha^2 - 2\sqrt{2}\rho\alpha}{2 + 2\alpha^2 + 2\sqrt{2}\rho\alpha}$$

$$\rho = \cos(\delta_2 - \delta_1) \quad \alpha = |R_1| / |R_2|$$

min  $\alpha$  at  $\rho = 1$

max  $\alpha$  at  $\rho = -1$

ii) Weak interaction の 場の関係  $\lambda \ll G$  の 考察, 論的考察.

$\lambda \ll G$

Fermion  $\Lambda^0, N, P, \mu, e, \nu$

strong

meson  $\left\{ \begin{array}{l} A_\mu \text{ neutral} \\ B_c \text{ charged} \end{array} \right.$

$e_j \mu A_\mu$

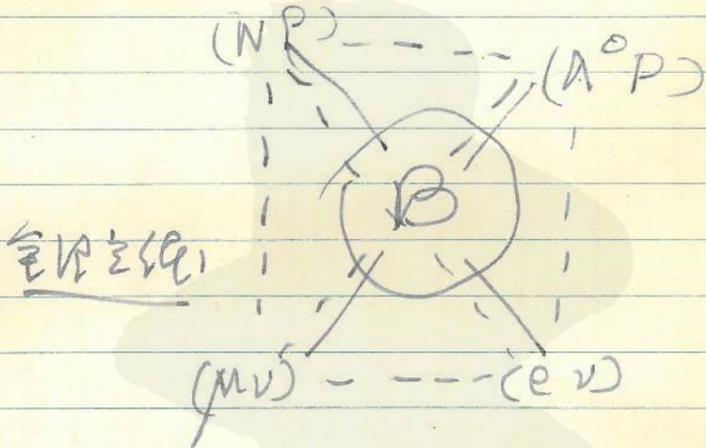

$g \sum_{a,b} \psi_a^\dagger \psi_b K_{ij}^{(ab)} B_c$  (weak)

$$g^2 \sim 10^{-7}$$

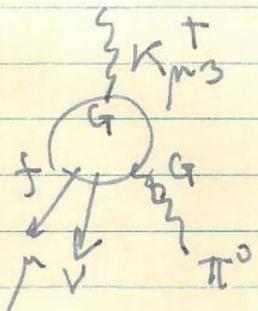

(4)

$\Sigma^- \rightarrow N + \rho^- \rightarrow m_{\rho^-} \approx 800 \text{ MeV}$

- 1) C, I X
- 2)  $\nu$  が存在,

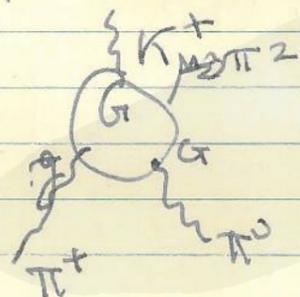

相互作用:

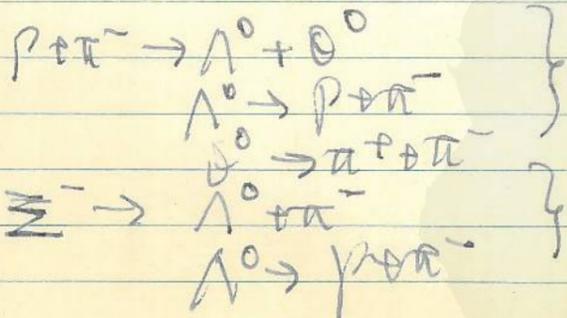

$G, f \rightarrow g$

$g \sim 10^{-13} \sim 10^{-15}$

$K_{\mu 3}^+$ : scalar or vector

$K_{e3}^+$  の場合も同様図形

後続図:

$\omega = R_3 \times R_2$

(5)

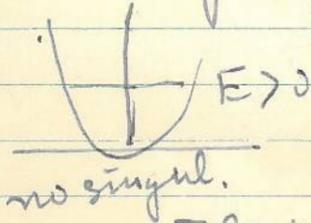

II. Field Theoretical Approach

Heisenberg's idea: extension of Hilbert space in  
 the quantum theory of wave fields  
 dipole ghost Pauli-Kallen's idea

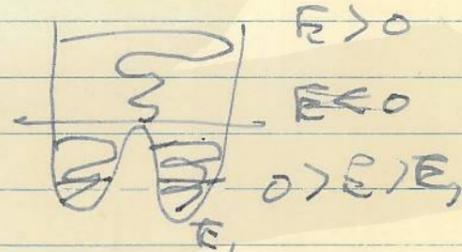

S-matrix is unitary etc.  
 matrix element  $I \leftrightarrow II \neq 0$  in A.E.D  
 $= 0$  in Heisenberg  
 indefinite metric  $\rightarrow$  non-local

idea: classical non-linear

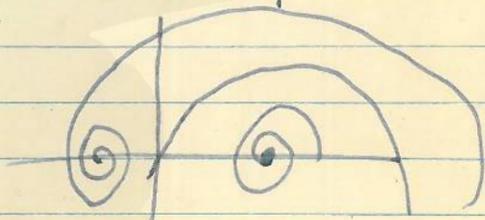

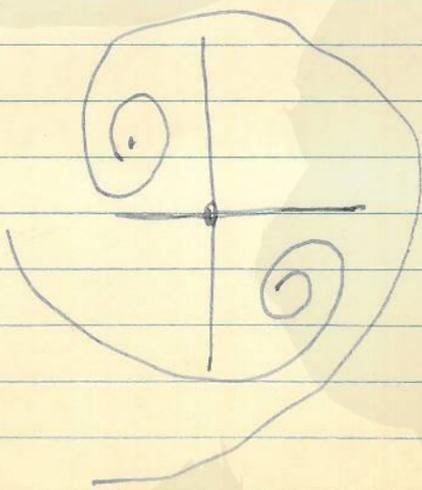

$$\ddot{q} + aq + bq^3 = 0$$

$$\square \varphi + a\varphi + b\varphi^3 = 0$$

spinor

$S_F$   
 negative energy  
 $\rightarrow$  ghost

(6)

坂谷: New T. D. method.

Symantik の 定式化法.

$\pi \rightarrow \varphi$  Heisenberg

$\pi \rightarrow \varphi'$  Maki

$$\langle \varphi'(m+n) \rangle_{vac} = 0 \quad \pi \leftrightarrow \varphi \text{ と } \varphi \leftrightarrow \pi,$$

Symantik の 定式化法 (2) の 定式化.

奥野:

徳岡: 非線形性, Non-linear

藤原: Non-linear field の quantization  
非線形性

藤原: Lee model の 定式化.

山崎: Lee model  
 $m_V = m_N$

下平: Cut-off,  $\rightarrow$  photon self-energy

$$\bar{\psi} \not{\epsilon} \not{A}_\mu \psi$$

Strickelberg

木村: high energy

$$\pi \leftrightarrow N + N$$
