Kyoto, Japan, May 9.

Dear Prof. Heisenberg,

I received your letter with pleasure. I am very grateful to you for your kind invitation to the Meeting of the "Deutsche Physikalische Gesellschaft" in Marienbad. It is to me a great honour that I have an opportunity of making a speech before the meeting.

I hope that I shall be able to start on the journey so as to be in time for the meeting. It is a pity that I am poor in German, as you suggested, but I want to make my endeavour to deliver the lecture in German instead of English under the title "Der gegenwartige Zustand der Theorie des Mesotrons" or something like for 30-40 minutes.

I should like to attend, if possible, the International Meeting on Physics at Zurich too, as I was informed that you are one of main lecturers in the section of nuclear physics. I am waiting the day when I shall have the honour of seeing you.

I remain,

Yours very truly,

Hideki Yukawa.
