Physics Dept.,
July 21, 1959.

Dear Sir:

For the last few weeks I have been attending a summer conference at Purdue led by Professors Heisenberg and Bethe in which your theory of the interaction of heavy particles has played a very prominent part.

If you have an extra copy each of the third and fourth of your articles "On the Interaction of Elementary Particles", I would be very grateful if you would allow me to place them on file at the University of Nevada, when they are not now available. Thanking you in advance,

Very truly yours,

Samuel S. Baddock
Assistant Prof. of Physics,
University of Nevada,
Reno, Nevada, U.S.A.

Dear Prof. Yukawa

In a discussion, held at the colloquium of theoretical physics in Ann Arbor, with Prof. Nordheim and Prof. Laporte on "meson" theory, it turned out, that some work I was doing on the theory of β radioactivity has been published in the last paper of you and your collaborators. The Proceedings of the Physico-Mathematical Society of Japan are not available in Ann Arbor. The only thing I know about your papers, is therefore, the interpretation of other people. Prof. Nordheim therefore suggested me to write to you and ask you, if there existed a possibility of getting the papers on "Interaction of elementary particles". I hope you don't mind that I am writing you without knowing you, but there is probably no other way to get acquainted with your theory.

Yours very truly

M. Dresden
