Physics Department,
Kyoto University fo Kyoto,
July 22, 1947.

Dear Dr. Bhabha,

I was greatly delighted yesterday, when Mr. Patel visited our university with his Japanese friend Tsukamoto and informed me of your kind offer. Indeed it is very difficult to carry out experimental researches in the field of nuclear physics owing to both economical and political conditions, in spite of the fact that many young physicists are there ^{we are} with technical skill in this field. So your offer I am very grateful to your offer. As to myself, I have been engaging always in theoretical research and theoretical physicists in our country are in btter condition compared with experimental physicists, so that their activities are recovered rather quickly after the war. I have been editing a new journal of theoretical physics from last July. I entrusted copies of the journal for you to Mr. Patel. I have been urgently wanting to communicate with you, as I am very much interested in your works on the theory of elementary particles. I shall be very much obliged, if you would kindly send me reprints of your recent papers. Hoping that I shall be able to vist your country in near future, I am always

Yours very sincerely.

Hideki Yukawa
