

48-11

Physics Department,
Kyoto University,
Kyoto, Japan,
June 15, 1948.

Dear Professor Rossi:

I received your letter and reprints with great pleasure. I believe that you have been receiving the journal on theoretical physics edited in our institute. I hope I shall be able to visit your institute in near future, as Prof. Oppenheimer proposed me to stay at the Institute for Advanced Study in Princeton from this autumn to next summer. Thus I shall have the opportunity of discussing with you the problems on the nature of mesons, which is now considerably elucidated owing to the experiments in your laboratory and other laboratories in your country. An important point which I want to know is the energy or energy distribution of electrons produced by π -meson decay which shall give us the clue to the mechanism of π -meson decay.

Give my best regards to Mrs. Rossi. Mrs. Yukawa may possibly go with me to your country.

Yours very sincerely

Hideki Yukawa.
